How to Use This Catalog (/2020-2021-catalog/catalog-introduction/how-to-use-this-catalog)

The college catalog is a vital resource for you as a Cosumnes River College student. Spend some time familiarizing yourself with the information in this catalog – it can be a key tool in your academic success.

About Cosumnes River College (/2020-2021-catalog/catalog-introduction/about-cosumnes-river-college)

Learn about Cosumnes River College, including its mission and vision, accreditation status, and leadership.
How to Use This Catalog
| Cosumnes River College

An Important Resource

This college catalog is a vital resource for you as a student at Cosumnes River College. Please spend some time becoming familiar with the information in this catalog – it can be a key tool in your academic success.

Changes

It's important to keep in mind that policies and regulations are subject to change. Many of these changes are dictated by the State of California or federal agencies. This catalog captures the latest information as of the publish date, but changes happen on a regular basis. For updated information, please consult the college website.

Official Updates

If there are significant changes – such as new courses, programs, or regulations – the college will publish a catalog update online (similar to an "addendum" in a print catalog). If updates are published, then they will typically appear in November of each year, but may be added at other times if critical content updates are necessary. Throughout the year, the catalog website (https://crc.losrios.edu/2020-2021-catalog) will always include the most current catalog content.

Career Education Program Changes

Please be aware that the required courses for career education (formerly career and technical education, or CTE) programs are subject to change due to state, regional, and federal agencies. It's important to meet with a counselor to stay on top of any potential changes to these programs.

About This Catalog

Every effort has been made to ensure that what is stated in this catalog is accurate. The courses and programs we offer, together with other information contained in this online catalog, are subject to change without notice by the administration of the Los Rios Community College District and Cosumnes River College for reasons related to student enrollment, level of financial support, or for any other reason, at the discretion of the district and Cosumnes River College. The district and Cosumnes River College further reserve the right to add, amend, or repeal any of their rules, regulations, policies, and procedures.
Cosumnes River College (CRC) values diversity, focuses on creativity and personal enrichment, and empowers students to reach their full potential as informed and productive members of the community. CRC is a leader in innovative ideas and sustainable values.

Serving south Sacramento County and Elk Grove since 1970, CRC’s main campus and its Elk Grove Center provides a dynamic learning environment for more than 14,000 ethnically and racially diverse students. One of the top 10 most diverse, 2-year public colleges in the nation (noted in the Almanac of Higher Education), CRC is a student-centered, open-access community college dedicated to preparing students for an ever-changing future.

In This Section

See Cosumnes River College's mission, vision, values, and commitment to equity.

Accreditation (/2020-2021-catalog/catalog-introduction/about-cosumnes-river-college/accreditation)
Cosumnes River College is accredited by the Accrediting Commission for Community and Junior Colleges (ACCJC) of the Western Association of Schools and Colleges.

Board of Trustees and Chancellor (/2020-2021-catalog/catalog-introduction/about-cosumnes-river-college/board-of-trustees-and-chancellor)
The Board of Trustees is the governing body of Los Rios Community College District, including Cosumnes River College.
Mission, Vision, and Values
| Cosumnes River College

Our Vision
To be an exemplary and innovative community college that empowers students and employees to strengthen the cultural, social, economic, and environmental well-being of their communities.

Our Mission
Cosumnes River College is a student-centered, open access community college dedicated to preparing students for an ever changing future. CRC courses and programs empower our diverse students to earn certificates or degrees, transfer to other educational institutions, or attain other lifelong academic or career aspirations.

Our Values
Cosumnes River College's culture builds upon a foundation of respect, compassion, civil discourse, and shared decision-making. CRC deeply values academic integrity, cultural competence, equity, social justice, innovation, and sustainability. CRC promotes teaching and learning excellence through diverse educational opportunities, varied instructional modes, and effective student services.

Our Commitment to Equity
Education should belong to everyone. To nourish this inclusion, CRC champions equity, diversity, social justice, and environmental sustainability as foundational to academic, campus, and community life. We work with the communities we serve toward just and fair inclusion into society in which all people can participate, prosper, and reach their full potential. We commit to equity driven decision-making, planning, and reflective processes that are responsive to the diverse identities and experiences in our community.

We seek to empower marginalized voices, nurture our many identities and social circumstances, foster cultural responsiveness, and stand against all manifestations of discrimination, including (but not limited to) those based on: ability statuses, age, ancestry, body size, citizenship/immigration status, economic status, educational status, employment status, ethnicity, food/housing insecurity, gender, gender identity, gender expression, incarceration experience, language, marital/partner status, military/veteran status, national origin, neurodiversity, political affiliation, pregnancy/reproductive status, race/racial identity, religion, sex, and sexual orientation.
Accreditation | Cosumnes River College

The Los Rios Community College District consists of four comprehensive, public California community colleges: American River College, Cosumnes River College, Folsom Lake College, and Sacramento City College. Cosumnes River College is accredited by the Accrediting Commission for Community and Junior Colleges (ACCJC) of the Western Association of Schools and Colleges, an institutional accrediting body recognized by the Council of Higher Education Accreditation and the US Department of Education. The Cosumnes River College educational centers are fully accredited under the college's accreditation status.
The Board of Trustees is the governing body of Los Ríos Community College District.

The board is responsible for the educational, physical, and financial well-being of the district. The board also sets legal policy for the district.

The board is composed of seven board members who are elected to four-year terms by registered voters. The board also includes a non-voting student trustee who is elected by students.

### Board Members

How to Enroll | Cosumnes River College

In This Section

Steps to Enroll (/2020-2021-catalog/getting-started/how-to-enroll/steps-to-enroll)
Learn about the steps to enrollment, including how to apply to Cosumnes River College, how to apply for financial aid, and other admissions tips.

Challenges to Matriculation Process (/2020-2021-catalog/getting-started/how-to-enroll/challenges-to-matriculation-process)
Students can elect to not participate or be exempt from some or all of the matriculation process if they meet certain criteria.
Steps to Enroll | Cosumnes River College

Apply Now

Guarantee your admission to Cosumnes River College by completing the online application to Cosumnes River College (https://www.opencccapply.net/cccapply-welcome?cccMisCode=232).

Note: You must submit a new application any time you have a break of enrollment where you do not attend for a year or more.

When applying to one college in the Los Rios Community College District, you are able to enroll in all four colleges (American River College, Cosumnes River College, Folsom Lake College, and Sacramento City College).

Save Money

To qualify for the Los Rios Promise and other programs, fill out the Free Application for Federal Student Aid (FAFSA) or the California Dream Act Application (CADAA). Learn more about how to save money with financial aid (https://crc.losrios.edu/save-money).

Other Admissions Tips

- Submit your high school and/or college transcripts to be placed automatically into English and mathematics courses that match your skill level. Learn more about placement (https://crc.losrios.edu/admissions/placement). English as a Second Language (ESL) assessment testing is still available via assessment testing (https://crc.losrios.edu/admissions/placement/assessment-testing).

- Participate in orientation for new students (https://crc.losrios.edu/admissions/orientation).
Challenges to Matriculation Process
| Cosumnes River College

Students can elect to not participate or be exempt from most or parts of the matriculation process based on the following criteria:

1. The student has completed an associate degree or higher.
2. The student satisfies at least two of the following:
   - The student has identified a goal of upgrading job skills
   - The student has enrolled for fewer than 12 units
   - The student is concurrently enrolled in another post-secondary institution
   - The student has declared no degree or occupational objective

Readmission from Dismissed Status (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/readmission-from-dismissed-status)
Students on dismissed status from Cosumnes River College must submit a petition to be readmitted after dismissed status.
Admissions Eligibility  
| Cosumnes River College

Any person who has earned a high school diploma or the equivalent – such as a certificate of proficiency issued by the State Board of Education including a General Education Development (GED) – is eligible for admission to Cosumnes River College. Non-high school graduates 18 years of age or older who demonstrate ability to profit from a community college education may also be admitted.

There are four main types of students who attend Cosumnes River College:

First-Time College Students
First-time college students are individuals who are a high school graduates or are at least 18 years old and never attended any college (other than those who attended while in high school).

Continuing Students
Continuing students are individuals who attended classes at any Los Rios college in the term immediately prior to the next term.

Returning or Transfer Students
All students returning after an absence or transferring from a non-Los Rios college must complete an admissions application and submit official transcripts of all other college work to the Admissions and Records Office.

High School Students
High school students who will be a junior or senior (grades 11 or 12) or at least 16 years of age by the start of classes may be eligible to enroll in a maximum of two community college classes each semester through the Advanced Education program.
Admission with Transfer Credit
| Cosumnes River College

Students who desire academic credit for courses taken at other regionally accredited colleges and universities must submit official transcripts of that work to the Admissions & Records office. It is the student’s responsibility to initiate a request to each institution asking that an official transcript of their work be sent directly to:

To be credited by Cosumnes River College, the coursework must meet the following criteria:

- The course(s) must have been taken at a regionally accredited college or university.
- The course(s) must be at the undergraduate level.
- The course(s) must have been completed with a grade of D or higher. All transferred grades (including Fs) will be used in the calculation of units attempted, units completed, and the grade point average.
- For determination of course applicability equivalency, student must meet with a counselor.

Students who have completed college- or university-level courses outside of the United States and who are requesting credit must have those transcripts evaluated by a Foreign Credit Evaluation Service. Cosumnes River College will accept a foreign transcript evaluation from a current member of Association of International Credential Evaluators, Inc. (http://aice-eval.org/) (AICE) or National Association of Credential Evaluation Services (https://www.naces.org/) (NACES).

Credit for coursework/degrees will be granted if it is determined to be equivalent to that of a regionally accredited college or university in the US and is at the baccalaureate level. Once received by Cosumnes River College, the evaluation becomes property of the college and is treated in the same manner as an official transcript.
Admission for Veterans and Dependents
Using Veterans Educational Benefits
| Cosumnes River College

Veterans services are available to assist veterans, spouses, and children of disabled or deceased veterans who may be eligible for federal and/or state educational benefits. New students should contact the Admissions & Records office at least two months prior to the start of the college semester to initiate the required paperwork.

In most cases, all tuition and enrollment fees, miscellaneous fees, textbooks, and class supplies are paid for by the student and not by Veterans Affairs (VA). The exception is students who are using the Post 9/11 GI Bill or Vocational Rehabilitation benefits.

If you believe VA will be paying your enrollment fees, then please verify with Veterans Services before you enroll in courses. The benefit process may take several months to complete for new benefit recipients. For continuing students, the benefit process can take four to six weeks. Benefit recipients should anticipate a delay of at least two months before receiving the first payment.

Visit the GI Bill website (https://benefits.va.gov/gibill/) for more information on VA benefits. Disabled veterans who qualify for additional benefits should contact their VA Vocational Rehabilitation Counselor prior to enrolling.

For more information, see veteran student admissions (https://crc.losrios.edu/veteran-admissions).
Cosumnes River College welcomes students from all over the world. Students who enter the US on a non-immigrant visa are considered international students; however, there are different attendance requirements for each visa type.

Cosumnes River College is approved by the Bureau of Citizenship and Immigration Services (formerly INS) to issue the I-20 for the F-1 visa. An international student must be enrolled in at least 12 units each semester and must maintain a C (2.0) grade point average at all times, in order to comply with F-1 visa requirements.

For more information, see international student admissions (https://crc.losrios.edu/international-students).
Advanced Education for High School Students | Cosumnes River College

Courses that provide enrichment and advancement in educational experience may be offered on a limited basis to high school students who have demonstrated academic achievement. The student must be 16 years of age or have completed their sophomore year of high school prior to the first day of the college semester. Advanced education students may not take remedial classes, those classes which need to be repeated because of low grades, and classes offered in the student's own school.

High school students should request information from their high school counselor regarding eligibility and an advanced education application. Advanced education students should then submit online a completed advanced education application form which has been signed by a parent and by a high school counselor or principal, an official transcript plus work in progress, and a written statement describing how the eligibility criteria are met and why they wish to take classes.

After the advanced education application has been approved, the student may register for classes. Students must enroll in person at Admissions & Records. An advanced education student is not considered a continuing student when registering for classes for any subsequent semesters. It is the responsibility of the advanced education student to become familiar with, and aware of, all the requirements, processes, and deadlines pertaining to advanced education.

For more information, see advanced education admissions (https://crc.losrios.edu/advanced-education).
At Cosumnes River College, we define undocumented to include all immigrants who reside in the US without legal status. All undocumented students must:

2. Submit a California Non-Resident Tuition Exemption Form available to the Admissions & Records Office.

For more information, see undocumented student admissions (https://crc.losrios.edu/undocumented-students).
Residency Requirements
| Cosumnes River College

Students who are California residents pay in-state tuition of $46 per unit, whereas students who are non-residents pay out-of-state tuition of $353 per unit. (Note: Tuition fees are for the 2020-21 academic year.) Community college enrollment fees are set by the California State Legislature. All fees are subject to change.

The term "California resident" for fee purposes may differ from other definitions of California residency. A person who has a California driver's license and/or vehicle registration or who is a California resident for tax, voting, or welfare purposes may have established legal residence in the state but not necessarily be considered a resident for fee purposes.

Residency Eligibility

To be eligible for California residency, a student must do the following:

- Be a citizen or hold a US immigration status that does not prevent establishment of residency
- Verify physical presence in California for at least one year and one day prior to the first day of the semester/term
- Verify intent to make California your permanent place of residence
- Establish financial independence from a non-resident parent or guardian

For more information, go to residency requirements on the Cosumnes River College website (https://crc.losrios.edu/residency-requirements).
Students on dismissed status from Cosumnes River College must submit a Petition for Readmission After Dismissed Status form, which is completed with a college counselor. In order to enroll in classes, the dean must approve readmission following counselor recommendation.

## Fee Descriptions

### Tuition and Enrollment Fee

Refundable: Yes. [Learn more about refunds](https://crc.losrios.edu/admissions/cost-of-attendance/refunds).

Tuition and enrollment fees are charged per unit of enrollment. These fees are set by the State of California and are subject to change at any time. Students who have registered for classes prior to an increase may be required to pay the additional amount.

### Foreign Student Application Fee

Refundable: No.

The foreign student application fee applies to all international students. Some international students may be exempt from paying this fee if they demonstrate economic hardship. Read Regulation R-2251 Nonresident and International Student Fees to learn more.

### Student Representation Fee

Refundable: Yes.

The student representation fee supports student government in its effort to advocate and lobby for legislative issues that affect students.

$1 of every $2 fee supports the operations of a statewide community college student organization that is recognized by the Board of Governors of the California Community Colleges (Assembly Bill 1504). This statewide organization provides for student representation and participation in state-level community college shared governance as well as governmental affairs representatives to advocate before the legislature and other state and local governmental entities.

Students can refuse to pay this fee based on moral, religious, political, or financial grounds. To be exempted from paying the fee, complete and submit the [Student Representation Fee Form BS-55 (PDF)](/shared/doc/bso/bs-55.pdf) to your college Business Services Office, preferably before you pay your fees.

This fee was established under provision of California Education Code section 76060.5 and California Code of Regulations, Title V, sections 54801-54805.

### Health Services Fee

Refundable: Yes.

3 All summer 2020 classes will be online; therefore, no parking services will be available.

4 Students who receive the California College Promise Grant (formerly known as the BOG Fee Waiver) only pay $31 for a fall or spring semester parking permit.
The following students may be exempted from the health services fee if they submit the required paperwork to the Admissions and Records Office before they register for classes:

- Students who depend exclusively upon prayer for healing in accordance with the teachings of a bona fide religious sect, denomination, or organization
- Students who receive California College Promise Grant (formerly BOG Fee Waiver) Part A

The following students are not charged the health services fee:

- Students enrolled in the Sacramento Regional Public Safety Training Center (SRPSTC)
- Students enrolled in apprenticeship programs
- Students only enrolled in UC Davis Co-Op program courses
- Incarcerated students inside correctional facilities
- Students admitted as special part-time students (K-12 students)

Universal Transit Pass (UTP) Fee

Refundable: Yes. Learn more about refunds (https://crc.losrios.edu/admissions/cost-of-attendance/refunds).

The Universal transit pass (UTP) is available to certain students for use on Regional Transit (RT) services, including buses and light rail. All eligible students are charged the UTP fee, regardless of whether or not they use the pass. The UTP is a sticker that attaches to your student access card.

Visit the Regional Transit website (http://www.sacrt.com/fares/) for a list of all transit and bus systems that accept the UTP. UC Davis Unitrans does not accept the UTP.

Eligibility

Students taking one or more units during the spring or fall semester are eligible for the UTP. All students are eligible for the UTP in the summer semester, regardless of how many units they take.

Some students are not eligible for the UTP, and therefore are not charged the fee. These students include:

- Students enrolled in the Sacramento Regional Public Safety Training Center (SRPSTC)
- Students enrolled in apprenticeship programs
- Students taking classes on the UC Davis main campus
- Students studying abroad
- Incarcerated students inside correctional facilities
- Students whose home college is not a Los Rios college but who are enrolled in courses at a Los Rios college through the California Community Colleges Online Education Initiative Course Exchange

Valid Dates

- For the spring semester, the UTP is valid January 1 through May 31.
- For the summer semester, the UTP is valid June 1 through July 31.
- For the fall semester, the UTP is valid August 1 through December 31.

Fee Structure

Beginning with the fall 2020 semester, eligible students will pay $2.50 per unit during the fall and spring semesters. Any fraction of a unit is rounded up to the next whole unit. The minimum fee charged is $2.50 (for one unit) and the maximum fee is $37.50 (for 15 or more units). For example:

- A student enrolled in .5 units will not pay the UTP fee.
- A student enrolled in one unit will pay $2.50.
- A student enrolled in 1.5 units will pay $5.00.
- A student enrolled in 15 or more units will pay the maximum fee of $37.50.

During the summer 2020 semester, all eligible students pay $11 for the UTP.
Lost or Stolen UTP Stickers
If your UTP sticker is lost or stolen, then you will have to pay the full price of $37.50 for a new one.

Damaged UTP stickers
If your UTP sticker is damaged but the remnants are still attached to your student access card, then we will issue a replacement for free.

Semester Parking Permit Fee
Refundable: Yes. Learn more about refunds (https://crc.losrios.edu/admissions/cost-of-attendance/refunds).

Students can buy a semester parking permit online via eServices (https://ps.losrios.edu/student/signon.html) or in person*. The semester parking permit is a decal that is placed on the windshield or hung from the rear-view mirror.

Read Administrative Regulation R-2252: Student Parking Fees (https://www.losrios.edu/docs/lrccd/board/regulations/R-2252.pdf) to learn more.

Lost, Stolen, or Damaged Parking Permit
If a semester parking permit is lost or stolen, then you will have to pay full price for a new one. If a vehicle is sold or damaged, then a replacement can be issued for $2. You will need to provide the old decal and proof of sale or repair for the $2 replacement.

* At American River College, Cosumnes River College, and Sacramento City College, parking permits can be purchased at the Business Services Office. At Folsom Lake College, parking permits can be purchased at the Admissions & Records Office.

Daily Parking Permit Fee
Refundable: No.

Students can buy daily parking permits from machines located in the parking lots at each campus. Daily parking permits are not recommended for motorcycles because they can be easily stolen. Read Los Rios' Administrative Regulation R-2252: Student Parking Fees (PDF) (https://www.losrios.edu/docs/lrccd/board/regulations/R-2252.pdf) to learn more.

Instructional Material Fees
Instructional material fees for designated courses may be assessed in accordance with Title 5, Section 59400 and Los Rios Policy P-2253 (https://shared/doc/board/policies/P-2253.pdf).
Fee Payment Deadlines  
| Cosumnes River College

Your tuition and fees are due soon after you enroll in classes. You will be dropped if your fees are not paid by the fee payment deadline. This is true even if you enroll in a class that starts later in the semester.

Fall 2020 Payment Deadlines

This information is still being finalized.

Spring 2021 Payment Deadlines

This information is still being finalized.

A Note About Financial Aid

Your financial aid award is not automatically applied to your fees (except the California College Promise Grant). After you have applied your financial aid, you are responsible for paying the remaining amount on your account.

Make sure you apply for financial aid as early as possible and review the financial aid deadlines (https://crc.losrios.edu/financial-aid-deadlines).
Debts Owed to College
| Cosumnes River College

Should a student or former student fail to pay a debt owed to the institution, the institution may withhold permission to any combination of the following from any person owing a debt until the debt is paid (Title 5, California Code of Regulations, Sections 42380 and 42381)

- Register
- Use facilities for which a fee is authorized to be charged
- Receive services, materials, food, or merchandise

If a student believes they do not owe all or part of an unpaid obligation, the student should contact the Business Services office.
Students (or parents of dependent students) may be able to obtain federal tax credits (including the American Opportunity Credit and Lifetime Learning Credit) for enrollment fees if the student:

- Is enrolled in at least six (6) units during any semester or summer session
- Meets the other conditions prescribed by federal law

Students who consent to online access can view and print the IRS Form 1098-T through eServices by January 31 of each year. For eligible students who do not consent to online access, the IRS Form 1098-T will be mailed by January 31.
Fee Refunds | Cosumnes River College

What Fees are Refundable?

Refundable Fees
- Resident enrollment and tuition fee
- Non-resident enrollment and tuition fee
- Universal transit pass (UTP) fee
- Student representation fee
- Health services fee
- Semester parking permit fee

Non-Refundable Fees
- Foreign student application fee
- Daily parking permit fee

How to Get a Refund

Refunds for Enrollment and Tuition Fees
Follow these steps to get a refund for enrollment and tuition fees:

1. Drop your class(es) by the deadline. After your class is dropped, money is credited to your eServices account. Keep all documentation that shows the date your class was officially dropped.

2. Request a refund [here](https://crc.losrios.edu/admissions/cost-of-attendance/refunds/refund-application) to get the money out of your eServices account by the deadline. You can submit this request online or in person at the Business Services Office.

Refunds for Student Representation Fee
Follow these steps to get a refund for the student representation fee:

1. Complete and submit the Student Representation Fee Form [here](/shared/doc/bso/bs-55.pdf) to your college Business Services Office.

2. If you paid by credit card, then a refund credit will be issued to the credit card you used. All other methods of payment will be refunded by check and mailed to the address on file with your college’s Admissions and Records Office.

Refunds for UTP and Health Services Fees
Follow these steps to get a refund for Universal Transit Pass (UTP) and health services fees:

1. Drop your class(es) by the deadline. After your class is dropped, money is credited to your eServices account. Keep all documentation that shows the date your class was officially dropped.

2. Request a refund [here](https://crc.losrios.edu/admissions/cost-of-attendance/refunds/refund-application) to get the money out of your eServices account by the deadline. You can submit this request online or in person at the Business Services Office.

Important Information About UTP Refunds

Fall or Spring Semester
For the spring or fall semester, the UTP fee is refundable if you drop your courses within the fee refund period. If you drop to less than one unit, then you are expected to return the UTP sticker.
Summer Semester
For the summer semester, the UTP fee is refundable if you drop all of your units within the refund period. A minimum fee of $11 will be withheld from your refund if you have already picked up a UTP sticker for the summer semester. You are expected to return the UTP sticker if you drop all units.

Refunds for Semester Parking Permits
To get a refund for a semester parking permit:

- Go to the Business Services Office to fill out a paper refund application before the deadline. Your parking permit decal must be attached to your application. You cannot do this step online. Your refund will be processed within 6-8 weeks.

Important Information About Refunds

Credit Balances in eServices
Money in your eServices account is not automatically refunded to you. If you have a credit balance in your eServices account and you do not request a refund by the last day of instruction of the semester, then you forfeit that money.

Exceptions for Military Students
If you have to withdraw from classes for military purposes, then you will be refunded 100% of your fees and tuition. This is true even if you drop after the deadline or request your refund after the end of the semester.

How long will it take to get my refund?
Refunds are issued within six to eight weeks. If you paid by credit card, then a refund will be issued to the credit card you paid with. All other methods of payment will be refunded by check and mailed to the address on file with Admissions and Records.

Financial Aid | Cosumnes River College

Get the Financial Help You Need

Money shouldn't get in the way of getting a college education. The Financial Aid Office is here to help you get the financial support you need to afford college.

Financial Aid Eligibility

Generally, to be eligible for financial aid, students must:

- Demonstrate financial need (for most programs)
- Be a US citizen or an eligible non-citizen
- Have a valid Social Security number (with the exception of students from the Republic of the Marshall Islands, Federated States of Micronesia, or the Republic of Palau)
- Be registered with Selective Service ([/2020-2021-catalog/while-you-are-here/financial-aid#ss]), if you're a male (you must register between the ages of 18 and 25)
- Be enrolled or accepted for enrollment as a regular student in an eligible degree or certificate program
- Be enrolled at least half-time to be eligible for Direct Loan Program funds
- Maintain satisfactory academic progress
- Sign the certification statement on the Free Application for Federal Student Aid (FAFSA) stating that:
  - You are not in default on a federal student loan and do not owe money on a federal student grant
  - You will use federal student aid only for educational purposes
- Show you're qualified to obtain a college or career school education by one of the following:
  - Having a high school diploma or a recognized equivalent such as a General Educational Development (GED) certificate
  - Completing a high school education in a homeschool setting approved under state law (or – if state law does not require a homeschooled student to obtain a completion credential – completing a high school education in a homeschool setting that qualifies as an exemption from compulsory attendance requirements under state law)
  - Enrolling in an eligible career pathway program and meeting one of the ability-to-benefit alternatives ([/2020-2021-catalog/while-you-are-here/financial-aid#benefit])

Registering for Selective Service

Most male students must be registered with Selective Service to receive federal student aid. You also must register if you are a male and are not currently on active duty in the US armed forces. If you are a citizen of the Federated States of Micronesia, the Republic of the Marshall Islands or the Republic of Palau, then you are exempt from registering for selective service.

You can call Selective Service toll-free at (888) 655-1825 for general information about registering, register online at sss.gov ([https://www.sss.gov](https://www.sss.gov)), or register when you submit your Free Application for Federal Student Aid (FAFSA) ([https://fafsa.ed.gov](https://fafsa.ed.gov)).

Ability-to-Benefit Alternatives

If you were enrolled in college or career school prior to July 1, 2012, or if you are currently enrolled in an eligible career pathway program*, then you may show you're qualified to obtain a higher education by one of the following:

- Passing an approved ability-to-benefit test* (if you don't have a diploma or GED, a college can administer a test to determine whether you can benefit from the education offered at that school)
- Completing six credit hours or equivalent course work toward a degree or certificate (you may not receive aid while earning the six credit hours)
Free Application for Federal Student Aid (/2020-2021-catalog/while-you-are-here/financial-aid/free-application-for-federal-student-aid)
The Free Application for Federal Student Aid (FAFSA) is a form you fill out to get financial aid. Financial aid includes fee waivers, grants, work study, loans, and scholarships.

California Dream Act Application (/2020-2021-catalog/while-you-are-here/financial-aid/california-dream-act-application)
The California Dream Act is a law that allows some undocumented and nonresident students to receive certain types of financial aid. To apply, students submit the California Dream Act Application (CADAA).

Promise Programs (/2020-2021-catalog/while-you-are-here/financial-aid/promise-programs)
Promise programs offer first-time, full-time students up to two years of tuition-free education at Cosumnes River College.

Grants (/2020-2021-catalog/while-you-are-here/financial-aid/grants)
A grant is money given to you by the federal or state government that you don't usually have to pay back.

Federal Work-Study (/2020-2021-catalog/while-you-are-here/financial-aid/federal-work-study)
The Federal Work-Study (FWS) program provides jobs to students to help them pay for their educational expenses.

Federal Direct Loans (/2020-2021-catalog/while-you-are-here/financial-aid/federal-direct-loans)
A federal direct loan is money you borrow from the government that you have to pay back with interest. We encourage students to apply for grants and scholarships before taking out a student loan. A loan is a serious and long-term obligation.

Scholarships (/2020-2021-catalog/while-you-are-here/financial-aid/scholarships)
A scholarship is money given to you to help pay for your education or related expenses. Scholarships come from a variety of sources, such as your college or a private organization.
Free Application for Federal Student Aid | Cosumnes River College

What is FAFSA?

The Free Application for Federal Student Aid (FAFSA) ([https://fafsa.ed.gov/](https://fafsa.ed.gov/)) is a form you fill out to get financial aid. Financial aid includes fee waivers, grants, work-study, loans, and scholarships. Submit the FAFSA each year you are in college – it only takes about 30 minutes to complete when you are prepared.

Though undocumented students cannot apply for aid through the FAFSA, they may be eligible for state financial aid through the California Dream Act ([https://dream.csac.ca.gov/](https://dream.csac.ca.gov/)).

Deadline to Submit FAFSA

Submit the FAFSA as early as you can. This will help you figure out how to pay for college before classes begin.

Academic Year 2020-2021

The 2020-2021 academic year includes fall 2020, spring 2021, and summer 2021.

- Date FAFSA available: October 1, 2019
- Deadline to submit FAFSA: March 2, 2020*
- Tax filing year to use for FAFSA: 2018

* You can submit the FAFSA after the “Deadline to Submit” date until June 30 of the following year, but priority is given on a first-come, first-served basis. You may not be considered for a Cal Grant if you submit your application after this date.

Federal School Code

Cosumnes River College’s federal school code is 007536. Make sure you include this on your FAFSA if you want to receive financial aid at Cosumnes River College.
The California Dream Act is a law that allows undocumented and nonresident students (US citizens and eligible non-citizens) who qualify for a non-resident exemption under Assembly Bill 540 (AB 540) to receive certain types of financial aid. The California Dream Act is unrelated to the federal Deferred Action for Childhood Arrivals (DACA) program.

Instead of submitting the Free Application for Federal Student Aid (FAFSA), students for whom any of the following are true can submit the California Dream Act Application (https://dream.csac.ca.gov/) (CADAA) to receive financial aid. You are eligible to complete the CADAA if you:

- Are undocumented
- Have a valid or expired DACA status
- Are a U visa holder
- Have Temporary Protected Status (TPS)
- Meet the non-resident exemption requirements under AB 540

Financial Aid Available for Undocumented Students

Undocumented students may qualify for the following types of financial aid:

- State grants, including the California College Promise Grant (formerly BOG Fee Waiver), Cal Grants, Chafee Grants, and Student Success Completion Grant
- Assistance from EOPS, CARE, or CalWORKs
- Some scholarships
- Los Rios Promise Program
Promise Programs
| Cosumnes River College

Los Rios Promise

At Cosumnes River College, we believe in you and your goals, and we want to see you achieve them – that’s why we’re making the Los Rios Promise. Promise programs offer first-time, full-time students up to two years of tuition-free education at any Los Rios college.

The Los Rios Promise covers tuition for 12 to 18 units but does not cover the cost of books or other fees. Learn about other types of financial aid (https://crc.losrios.edu/student-resources/financial-aid/types-of-financial-aid) that can help cover your expenses.

Deadline for Los Rios Promise Program Enrollment and FAFSA Completion

Eligible students must enroll in classes and submit the FAFSA/CADAA by the following deadlines to receive Los Rios Promise funds:

<table>
<thead>
<tr>
<th>2019-2020</th>
<th>2020-2021</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Summer 2019:</strong> June 3, 2019</td>
<td><strong>Summer 2020:</strong> June 17, 2020</td>
</tr>
<tr>
<td><strong>Fall 2019:</strong> August 14, 2019</td>
<td><strong>Fall 2020:</strong> September 8, 2020</td>
</tr>
<tr>
<td><strong>Spring 2020:</strong> January 9, 2020</td>
<td><strong>Spring 2021:</strong> February 1, 2021</td>
</tr>
</tbody>
</table>

Eligibility

To be eligible for the Los Rios Promise, you must:

- Be a California resident
- Be a first-time college student*
- Enroll in and maintain at least 12 units for fall and spring semesters by the deadline
- Complete the Free Application for Federal Student Aid (FAFSA) or the California Dream Act Application (CADAA) by the deadline

* Courses taken during high school (through dual enrollment or advanced education) are considered "pre-college" and do not prevent you from taking advantage of the Los Rios Promise. Students who transfer from a college other than a Los Rios college are not eligible for the Los Rios Promise.

Los Rios Promise Funds for Summer Tuition Fees

To use Los Rios Promise funds to pay for your summer tuition fees, you must do both of the following by the Los Rios Promise Program Enrollment and FAFSA Completion deadline:

- Enroll in any number of units for the summer term
- Enroll in at least 12 units for the fall semester

Eligibility for a Second Year

To apply for the Los Rios Promise Program for a second year, you must have been enrolled in at least 24 units by the Los Rios Promise Program Enrollment and FAFSA Completion deadline for the previous year.
Grants | Cosumnes River College

What is a Grant?

A grant is money given to you by the federal or state government that you don't usually have to pay back.

Types of Grants for Community College Students

Learn more about the types of grants available to community college students, eligibility, and how and when to apply.

Cal Grant B

Cal Grants are awarded by the State of California and do not have to be repaid.

What it Covers

Cal Grant B Entitlement and Competitive awards provide up to $1,670 for books and living expenses, plus up to an additional $2,000 for full-time community college students. If you transfer to an eligible four-year college or university, Cal Grant B also helps pay for tuition, fees, and living expenses.

Eligibility

Cal Grant B Entitlement awards are for first-year, low-income students whose academic program is at least one academic year.

Cal Grant B Competitive awards are for disadvantaged and low-income students who have a minimum 2.0 grade point average (GPA) and are enrolled in an academic program that is at least one year long.

How to Apply

To apply for a Cal Grant, you must submit the following by March 2 each year you are eligible:

- FAFSA [https://fafsa.ed.gov/] or the California Dream Act [https://dream.csac.ca.gov/] application* (if you do not have a social security number)
- Verified Cal Grant GPA [http://www.csac.ca.gov/pod/cal-grant-gpa-information]

* DACA and AB 540 students are not eligible for Cal Grant Competitive awards.

Cal Grant C

Cal Grants are awarded by the State of California and do not have to be repaid. [http://www.csac.ca.gov/pod/cal-grant-gpa-information]

What it Covers

Cal Grant C awards pays $547 toward tuition, books, tools, and equipment for students in occupational, technical, or vocational programs at community colleges.

Eligibility

Cal Grant C awards are for students enrolled in vocational programs that are at least four months long. Funding is available for up to two years, depending on the length of your program.

How to Apply

To apply for a Cal Grant C award, you must submit the following by March 2 each year you are eligible:

- FAFSA [https://fafsa.ed.gov/] or the California Dream Act [https://dream.csac.ca.gov/] application (if you do not have a social security number)
- Verified Cal Grant GPA [http://www.csac.ca.gov/pod/cal-grant-gpa-information]
California College Promise Grant
The California College Promise Grant (formerly BOG Fee Waiver) is just for California community college students and does not have to be repaid.

What it Covers
The California College Promise Grant waives enrollment fees for eligible students. It does not cover the cost of books or other expenses.

Eligibility
You may qualify for the California College Promise Grant if you are a California resident or are exempt from nonresident fees under AB 540 and you meet the criteria of Type A, Type B, or Type C described below.

Type A
You are receiving Temporary Aid For Needy Families (TANF), Supplemental Security Income (SSI/SSP), or General Assistance.

Type B
You meet the income standards listed below. Please note:

- Family size means the number of people in your household, including yourself
- Total family income means adjusted gross income and/or untaxed income for the year listed

<table>
<thead>
<tr>
<th>FAMILY SIZE</th>
<th>2017 TOTAL FAMILY INCOME (FOR 2019/2020 SCHOOL YEAR)</th>
<th>2018 TOTAL FAMILY INCOME (FOR 2020/2021 SCHOOL YEAR)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$18,210</td>
<td>$18,735</td>
</tr>
<tr>
<td>2</td>
<td>$24,690</td>
<td>$25,365</td>
</tr>
<tr>
<td>3</td>
<td>$31,170</td>
<td>$31,995</td>
</tr>
<tr>
<td>4</td>
<td>$37,650</td>
<td>$38,625</td>
</tr>
<tr>
<td>5</td>
<td>$44,130</td>
<td>$45,255</td>
</tr>
<tr>
<td>6</td>
<td>$50,610</td>
<td>$51,885</td>
</tr>
<tr>
<td>7</td>
<td>$57,090</td>
<td>$58,515</td>
</tr>
<tr>
<td>8</td>
<td>$63,570</td>
<td>$65,145</td>
</tr>
</tbody>
</table>

Note: For each additional family member, add $6,480

Type C
You submitted the Free Application for Federal Student Aid (FAFSA) or the California Dream Act application (if you don’t have a social security number) and it shows you have unmet financial need.

How to Apply
To apply, fill out the California College Promise Grant [application](https://home.cccapply.org/money/california-college-promise-grant) online. Alternatively, you can fill out the application below and return the completed application to the Financial Aid Office.

- 19-20 California College Promise Grant Application (/shared/doc/financial-aid/forms/19-20_CCPG_Application.pdf) PDF (For Summer 2019, Fall 2019, Spring 2020)
- 20-21 California College Promise Grant Application (/shared/doc/financial-aid/forms/20-21_CCPG_Application.pdf) PDF (For Summer 2020, Fall 2020, Spring 2021)

Maintaining the California College Promise Grant
If you qualify for the California College Promise Grant, then make sure you continue to meet the following academic and progress standards to keep receiving the grant funds.

- **Academic**: Maintain a grade point average (GPA) of 2.0 or higher. If your cumulative GPA falls below 2.0 for two consecutive primary terms (fall/spring semesters), then you may lose your grant eligibility.
• **Progress**: Complete more than 50% of your coursework. If the cumulative number of units you complete is not more than 50% in two consecutive primary terms (fall/spring semesters, or fall/winter/spring quarters), then you may lose your grant eligibility.

• **Combination of academic and progress standards**: Any combination of two consecutive terms of cumulative GPA below 2.0 and/or cumulative unit completion of not more than 50% may result in loss of grant eligibility.

### Chafee Grant for Foster Youth

Chafee Grants are awarded by the State of California to current or former foster youth. Chafee Grants do not have to be repaid.

#### What it Covers

A Chafee Grant can be used to pay for tuition, fees, books, supplies, transportation, living expenses, and child care.

#### Eligibility

To qualify for a Chafee Grant, you must meet the following criteria:

- You are a current or former foster youth who was a ward of the court, living in foster care, for at least one day between the ages of 16 and 18
- If you are or were in Kin-GAP, a non-related legal guardianship, or were adopted, you are only eligible if you were a dependent or ward of the court, living in foster care, for at least one day between the ages of 16 and 18
- You have not reached your 26th birthday as of July 1 of the award year
- You have not participated in the program for more than five years (consecutive or otherwise)

#### How to Apply

To apply for a Chafee Grant, you must submit the following each year you are eligible:

- [FAFSA](https://fafsa.ed.gov/) or the [California Dream Act](https://dream.csac.ca.gov/) application (if you do not have a social security number)
- The [Chafee Grant](https://chafee.csac.ca.gov) application

### Federal Pell Grant

Federal Pell Grant are awarded by the federal government and do not have to be repaid.

#### What it Covers

Federal Pell Grant can be used for tuition, fees, books, supplies, transportation, living expenses, and child care.

#### Eligibility

Federal Pell Grant is based on financial need, cost of attendance, the number of financial aid eligible units enrolled, and how long you plan to attend college. Eligible students can receive the Federal Pell Grant for up to six years (12 full-time semester or the equivalent), or 600%.

Pell Grant are usually only given to undergraduate students who have not earned a bachelor's degree or higher. In some cases, a student enrolled in a post-baccalaureate teacher certification program can receive a Federal Pell Grant. You are not eligible to receive a Pell Grant if you are incarcerated or are subject to an involuntary civil commitment upon completion of a period of incarceration for a forcible or non-forcible sex offense.

DACA and undocumented AB 540 students are not eligible to receive Federal Pell Grant.

#### How to Apply

Submit the [FAFSA](https://fafsa.ed.gov/) every year to see if you qualify for a Federal Pell Grant. The amount of other student aid you qualify for does not affect the amount of your Federal Pell Grant.

### Federal Supplemental Educational Opportunity Grant (FSEOG)

Federal Supplemental Educational Opportunity Grants are awarded by the federal government and do not have to be repaid.

#### What it Covers

A FSEOG can be used for tuition, fees, books, supplies, transportation, living expenses, and child care. You can receive $100 to $600 per year.
Eligibility
FSEOGs are awarded based on financial need, how early you apply, number of financial aid eligible units enrolled, and total amount of Financial Aid.

FSEOGs are only given to undergraduate students who have not earned a bachelor's or a professional degree.

DACA and AB 540 students are not eligible to receive FSEOGs.

How to Apply
Submit the FAFSA (https://fafsa.ed.gov) each year to see if you qualify for a FSEOG. Cosumnes River College has a limited amount of FSEOG funds, so make sure you submit your FAFSA as early as possible.

Student Success Completion Grant (SSCG)

What it Covers
The Student Success Completion Grant (SSCG) provides up to $4,000 per year to pay for educational costs.

Eligibility
To qualify for a SSCG, you must be:

- A Cal Grant B or C recipient
- Enrolled in at least 12 units each semester

Students enrolled in 12 to 14.99 units will receive $649 for that semester. Students enrolled in 15 or more units will receive $2,000 for that semester.

How to Apply
Students who qualify will be notified. No additional application is necessary for eligibility for the SSCG.
Federal Work-Study
| Cosumnes River College

What is Federal Work-Study?

The Federal Work-Study (FWS) program provides jobs to students to help them pay for their educational expenses.

Eligibility

To be eligible, you must:

- Have a complete financial aid file
- Have unmet financial need
- Be enrolled in at least six financial aid course eligible units at Cosumnes River College*
- Maintain satisfactory academic progress

*If you are enrolled at multiple Los Rios colleges, then you must have an approved consortium on file for those units to be counted towards your enrollment status.

You are not guaranteed a FWS job just because you are eligible for FWS. FWS jobs are limited, so make sure you apply for a FWS job as early as possible.

Hours

FWS students work an average of 17 hours per week during the fall and spring semesters. Students may be employed for no more than 26 hours per week during a semester and no more than 40 hours per week between semesters. The number of hours may change depending on the needs of the department. Summer FWS hours are based on funding availability.

You may not work more than the number of hours you were awarded.

Pay

FWS students are paid an hourly rate at minimum wage. On average, FWS students earn up to $7,000 during the school year. Paychecks are distributed on the tenth of each month.

Disclaimer

We reserve the right to reduce your FWS award at the end of the fall or spring semester for hours not worked or due to ineligibility. Your FWS award may also be reduced if your financial need changes. You will be notified of any change via email and it is your responsibility to notify your supervisor of the change.
Federal Direct Loans
| Cosumnes River College

What is a Federal Direct Loan?

A federal direct loan is money you borrow from the government that you have to pay back with interest. We encourage students to apply for grants and scholarships before taking out a student loan. A loan is a serious and long-term obligation.

Loan Eligibility

To be eligible for a federal student loan, you must:

- Submit the Free Application for Federal Student Aid (FAFSA) (https://fafsa.ed.gov/)
- Demonstrate that you are qualified to enroll in college by one of the following means:
  - You have a high school diploma
  - You have a General Education Development (GED) Certificate
  - You passed the California High School Proficiency Exam (CHSPE)
- Be a US citizen or eligible non-citizen with a social security number (SSN)
- Be enrolled in an eligible degree or certificate program
- Maintain satisfactory academic progress
- Register with the US Selective Service (for males age 18 to 25)
- Have never been convicted of selling or possessing illegal drugs
- Certify that you will use federal financial aid only for educational purposes
- Certify that you are not in default on a federal student loan and do not owe money on a federal student grant

All borrowers must sign the Master Promissory Note (MPN) annually. New borrowers must also complete entrance loan counseling through studentloans.gov (https://studentloans.gov).

Types of Federal Loans

Subsidized Direct Loans

Subsidized direct loans are given to eligible students who demonstrate financial need.

The federal government pays the interest on subsidized loans while you are enrolled in school at least half-time (six units in the fall or spring semester; three units in the summer semester). If you graduate, drop below half-time, or withdraw from school, then you have a six-month grace period where the federal government will continue to pay the interest on your loan. After the six-month grace period, you are responsible for paying the interest on your loan.

Unsubsidized Direct Loans

Unsubsidized direct loans are given to eligible students, regardless of their financial need. The combined amount of an unsubsidized direct loan and all other financial aid that you receive cannot exceed the cost of attendance.

Interest accrues from the time the loan is disbursed, and interest payments begin immediately but can be deferred until you are done with school. It is advantageous to pay the interest while you are in school. This way, the debt will be the principal amount only when repayment begins. Regular monthly payments begin six months after you graduate, drop below half-time status, or withdraw from school.
## Annual Loan Limits

<table>
<thead>

## Borrower's Rights and Responsibilities

When you accept a loan, you accept legal rights and responsibilities that last until the loan is repaid.

### Borrower's Rights

You have the right to:

- Receive a copy of your promissory note either before or at the time the loan is made.
- Receive a disclosure statement before repayment on your loan begins, including information about:
  - Interest rates
  - Fees
  - Loan balance
  - The number of payments
  - The amount of each payment
- A grace period after you leave school or drop below half-time status and before your loan payments begin (if applicable)
- Prepay all or part of your loans without a repayment penalty
- Receive written notice if your loan is sold to a new holder
- Apply for deferment for your loan payments for certain specified periods (if eligible)
- Request forbearance from the holder of your loan if unable to make payments and don't qualify for deferment
- Receive proof when your loan is paid in full

### Borrower's Responsibilities

You agree to:

- Repay your loan(s), including accrued interest and fees, even if you do not:
  - Complete or find satisfaction in your education
  - Complete the program within the regular timeframe
  - Obtain employment
- Attend exit counseling before you leave school or drop below half-time enrollment
- Notify your loan holder within ten days if you:
  - Change your name, address, or phone number
  - Drop below half-time status
  - Withdraw from school
  - Transfer to another school
  - Change your graduation date
- Direct all correspondence to your loan holder or servicer
- Make monthly payments on your loan after leaving school, unless you are granted a deferment or forbearance
- Notify your loan holder of anything that might change your eligibility for an existing deferment

### Loan Exit Counseling

All students who receive a loan must complete mandatory online loan exit counseling through the Department of Education. Loan exit counseling provides important information regarding repayment, deferment, and default prevention.

### How to Complete Loan Exit Counseling

Visit [studentloans.gov/ExitCounseling](https://studentloans.gov/ExitCounseling) to complete loan exit counseling. You will need your FAFSA PIN to complete the loan exit counseling. Be sure to select Cosumnes River College (federal school code: 007536) when asked, otherwise the Financial Aid Office will not receive confirmation that you completed the requirement.

### When to Complete Loan Exit Counseling

Loan recipients must complete loan exit counseling when they do any of the following:
- Withdraw from college
- Drop below half-time units
- Transfer to another college
- Graduate

Failure to complete loan exit counseling may result in the delay of your financial aid processing.
What is a Scholarship?

A scholarship is money given to you to help pay for your education or related expenses. Scholarships come from a variety of sources, such as your college or a private organization.

Examples of types of scholarships:

- Merit scholarships are based on a student's achievements.
- School scholarships are given to students by the school they attend.
- Work scholarships require students to work to receive scholarship money.
- Field of Study scholarships are given to students pursuing a specific field of study or academic program.
- Need scholarships are based on financial need.
- Student-specific scholarships can be based on a student's nationality, gender, race, religion, medical history, and so on.

The Financial Aid office maintains a list of local, state, and national scholarships. Enrollment verification is usually required.

LEARN MORE ABOUT SCHOLARSHIPS ➤ (HTTPS://CRC.LOSRIOS.EDU/SCHOLARSHIPS)
Academic Freedom

Statement of Principles on Academic Freedom (American Association of University Professors)

- The purpose of this statement is to promote public understanding and support of academic freedom and tenure and agreement upon procedures to ensure them in colleges and universities. Institutions of higher education are conducted for the common good and not to further the interest of either the individual teacher or the institution as a whole. The common good depends upon the free search for truth and its free exposition.

- Academic freedom is essential to these purposes and applies to both teaching and research. Freedom in research is fundamental to the advancement of truth. Academic freedom in its teaching aspect is fundamental for the protection of the rights of the teacher in teaching and the freedom of the student in learning. It carries with it duties correlative with rights.

- Teachers are entitled to freedom in the classroom in discussing their subject, but they should be careful not to introduce into their teaching controversial matter, which has no relation to their subject.

- College and university teachers are citizens, members of a learned profession, and officers of an educational institution. When they speak or write as citizens, they should be free from institutional censorship or discipline, but their special position in the community imposes special obligations. As scholars and educational officers, they should remember that the public may judge their profession and their institution by their utterances. Hence they should at all times be accurate, should exercise appropriate restraint, should show respect for the opinions of others, and should make every effort to indicate that they are not speaking for the institution.

Academic Honors

The distinction of honors and highest honors is noted on a student's transcript for each semester in which a student has enrolled in twelve (12) units or more, and has earned a grade point average (GPA) of at least 3.0 (honors) or 3.5 or higher (highest honors). Students earning highest honors will be notified by email of their eligibility to join the honor society, Phi Theta Kappa.

Honors at Graduation

Students who maintain a high grade point average are eligible for honors at graduation. Students who maintain a grade point average of 3.0 or better are eligible for graduation with honors, and students who maintain a grade point average of 3.5 or better are eligible for graduation with highest honors. All college coursework that a student has completed is used to calculate honors at graduation (including coursework taken outside of Los Rios). The published lists of students are compiled from the data available at the time of publication and may be subject to subsequent revision.

Academic Renewal

A student may petition to have previous sub-standard grades (a D or F) earned at Cosumnes River College discounted. Courses and grades which no longer reflect a student's current educational objective and current level of academic success may upon petition be discounted in the computation of the grade point average (Title 5, Section 55046). The following conditions must apply:

- A minimum of twelve (12) consecutive months shall have elapsed since the end of the semester or summer session in which the work to be alleviated was recorded; and a minimum of twelve (12) semester units (or its equivalent) with a grade of C or Pass/Credit or better shall have been attained. The coursework must have been completed at a regionally accredited college.

- Current educational objectives must be discussed with a counselor and the counselor's recommendation must be included on the petition.

- No more than thirty (30) units of substandard grades may be discounted.

- Under no circumstances may course work be discounted if it was used to fulfill requirements for a degree or certificate that has been awarded.

- All grades remain on the permanent record and transcript of grades. However, a proper notation on the transcript will indicate the specific grades that were discounted from the grade point average.

- Once elected, the academic renewal cannot be reversed.
Academic renewal is not intended for courses that are required and/or will be repeated.

Students with questions regarding this policy or who want to initiate a petition should contact the Counseling office.

**Attendance**

For students to successfully complete their college work, regular class attendance is necessary, and students are expected to attend all sessions of classes in which they are enrolled (Los Rios Regulation R-2222 [Los Rios Regulation R-2222](/shared/doc/board/regulations/R-2222.pdf)).

All students who remain enrolled in a class after the last day to withdraw (see the academic calendar [Los Rios Regulation R-2222](https://crc.losrios.edu/academic-calendar)) will be issued a letter grade for the course. If a student has stopped attending but not dropped the class, the student may receive an F grade for the course on their permanent record. Exception to this policy involves completion of the Student Petition, with appropriate signatures and documentation of extenuating circumstances.

**Excessive Absences**

Students are expected to attend all sessions of the class in which they are enrolled. Any student with excessive absences may be dropped from class (Title 5, Section 58004).

Per Los Rios Regulation R-2222, a student may be dropped from any class when that student’s absences exceed six percent (6%) of the total hours of class time. Instructors shall state in each course syllabus what constitutes excessive absences for that course.

**Non-Attendance at First Class**

Per Los Rios Regulation R-2222, students who fail to attend the first session of a class may be dropped by the instructor.

**Auditing Courses**

Cosumnes River College does not permit auditing of classes. Auditing is defined as attending a course without having enrolled in the course, without responsibility for completing assignments, and without receiving a grade or credit.

**Catalog Rights**

For purposes of graduation from any of the colleges of the Los Rios Community College District, students who remain in attendance in one regular session (semester or summer session) may elect to meet the requirements in effect at the Los Rios college from which the student intends to graduate, in one of three ways:

1. Requirements in effect at the time of admission to a Los Rios college
2. Requirements in effect at the time the student originally enrolled in a regionally accredited college or university
3. Requirements in effect at the intended date of graduation from a Los Rios college

Please note:

- A college may authorize or request substitution for discontinued courses.
- Students changing their major field of study may be required to complete those requirements for the major in effect at the point of change.
- For purposes of this section, “attendance” means taking classes in at least one session (semester or summer session) in each calendar year. Absence for attendance at another regionally accredited institution shall not be considered an interruption in attendance, Los Rios Policy P-7242 [Los Rios Policy P-7242](/shared/doc/board/policies/P-7242.pdf).

**Change of Address and/or Name**

Requests to have a student’s name changed are submitted directly to the Admissions & Records office. In order for this type of request to be processed, documentation (such as a marriage license, court documents, or naturalization papers) is required to verify a legal name change.

Students should report a change of address immediately. Changes can be submitted online in eServices [Los Rios Policy P-7242](https://ps.losrios.edu/student/signon.html) or by submitting a Change of Data form to the Admissions & Records office. Cosumnes River College is not responsible for misdirected mail if the address change is not provided by the student.

Students can submit birth date and social security number corrections to the Admissions & Records office along with proper documentation (official birth certificates or social security verification).

**Course Repetition and Repeatability**
Repetition of courses must be conducted by all California community colleges in compliance with Title 5, Sections 55040 through 55046.

**Course Repetition Where Substandard Grade is Recorded**

Where a student has received a substandard grade in a course taken at a college, a student may repeat that course up to a maximum of two (2) times in an effort to alleviate the substandard academic grade. Substandard grade is defined as a notation of D, F, NC (No Credit), NP (No Pass), or W (Withdrawal). This regulation is effective across all Los Rios colleges.

The grade and credits earned in the final enrollment shall be used exclusively in determining the grade points earned for that particular course (Title 5, Section 55042).

**Repeatable Courses**

Courses taken where a grade of C or better was earned cannot be repeated. There are, however, certain specialized courses that are designated as "repeatable" and are listed as such in the course description. These include:

- Courses for which repetition is necessary to meet the major requirements of CSU or UC for completion of a bachelor's degree
- Intercollegiate athletics and their related conditioning courses may be repeated to meet requirements for California Community College Athletic Association (CCCAA) eligibility.
- Intercollegiate academic or vocational competition courses with the primary purpose to prepare students for competition
- Variable unit courses that are open entry/exit such as math, reading, and writing laboratory courses. Students may re-enroll in these courses as many times as necessary to complete one time the entire curriculum of the course.
- Work Experience courses, which can be taken again when there is new or expanded learning on the job for a maximum of six (6) to sixteen (16) units.

**Repetition Without Substandard Grades**

Unless a specific exception applies, a student who has received a satisfactory grade shall not repeat the course. Satisfactory grade is defined as A, B, C, P (Pass), or CR (Credit). There are special circumstances that allow for repetition. However, the student must submit a petition requesting the course repetition. These include:

- Students may repeat a course where a course is required by a statute or regulation as a condition of continued paid or volunteer employment, or as a result of a significant change in industry or licensure standards such that repetition is necessary for employment or licensure. These repetitions are not limited and are granted based on the college's verification of established legal mandates (Cal. Code Regs., Title 5, section 55040).
- Students may repeat a course if there has been a significant lapse of time since the first grade was obtained, and:
  - If the college has a properly established recency prerequisite for a course or program (Title 5, Section 55043).
  - If the college finds that another institution of higher education to which the student seeks to transfer has established a recency requirement which the student shall not be able to satisfy without repeating the course in question (Title 5, Section 55043).
- The college finds that the student's most recent previous grade is, at least in part, the result of extenuating circumstances. Extenuating circumstances are verified cases of accident, illness, or other circumstances beyond the student's control. This is a one-time exception.
- A special course that can be repeatable by petition so that a particular student can be approved to repeat it as a disability-related accommodation.

**Limitations on Active Participatory Courses**

Active participatory courses are those courses where individual study or group assignments are the basic means by which learning objectives are obtained. These include kinesiology/physical education (PE) active participatory courses, as well as visual and performing arts active participatory courses (theatre arts, music, and art). Some courses in these categories are related in content and have been placed in groups that the Los Rios colleges are calling "families" of courses. Each family of courses allows for skill development beyond an introductory level.

Students are limited to taking a maximum of four courses in any one family across all four Los Rios colleges, regardless of how many courses there are. Sometimes a family of courses may include more than four. For example, the Modern Dance Technique family of courses across the four Los Rios colleges includes five courses – DANCE 330 through DANCE 334 (Modern Dance I, II, III, IV, and V).

In addition, if a student gets a substandard grade [a notation of D, F, NC (No Credit), NP (No Pass), or W (Withdrawal)] in any course within a family, the substandard grade counts as one of the four course limitations in the family. The list of families of courses is available in the Counseling office. Please consult with a counselor for more information.

**Course Time Conflict/Course Overlap**

Students may not enroll in two classes that meet during part of the same hour, except through a petition process. The student must state their justification for enrolling in the overlapping class, and instructors must indicate how the missed time will be made up (Title 5, Section 58031).
In some circumstances, a previous sub-standard grade (a D or F) can be alleviated. You may petition to discount these units in computing your grade point average (GPA) if they meet the criteria set out by the Admissions and Records policies. However, no discount will be given for coursework required for a degree or certificate that has been granted.

</tbody>
</table>

Grade Point Average
The grade point average is found by taking the (Total Grade Points Earned) divided by (Total units attempted with a letter grade).

Progress Percentage
The progress percentage is found by taking the (Total units with W, I and NC) divided by (Total units enrolled).

Pass/No Pass Grading
You may choose one course each semester from courses that allow Pass/no Pass (P/NP) grading. A petition must be filed with the admissions office before the deadline published in the Class Schedule. A grade earned with an "A", "B" or "C" grade will be recorded as P with Grade Points Per Unit. A "D" or "F" grade will be recorded as NP with no Grade Points Per Unit. Units attempted for P/NP grades are not computed in the grade point average but are used for determining progress probation and dismissal. Once you have filed for P/NP grading in a course, it cannot be changed to a letter grade. No more than 15 units of Pass/No Pass may be applied toward an AA or AS degree.

Incomplete Grading
An instructor may assign an incomplete grade, "I", when the instructor believes the student cannot complete the requirements of the class before the end of the semester due to unforeseeable emergency and justified reasons. To receive credit for the class, the student must finish the incomplete work within one year after the end of the semester. After the work is completed and evaluated, or when the time has expired, a final grade will be assigned. A student receiving an incomplete may not re-enroll in the course.

In Progress
If you receive an "in-progress" grade, you must re-enroll in the class in the next semester. If you don't re-enroll, a grade will be assigned in lieu of the "in-progress."
Withdrawal from Class
A student may officially drop a class without notation on the permanent academic record/transcript prior to the point in which 15% of a class has occurred (see the academic calendar for withdrawal deadlines). Withdrawals occurring after this time, and before the point in which 75% of the class has occurred, shall result in a W notation on the permanent academic record/transcript. Official withdrawals are those that have been processed via eServices or in the Admissions and Records office.

A W grade on the permanent academic record/transcript is used for determining progress probation and progress dismissal. No withdrawals are permitted during the last 25% of a course (except due to extenuating circumstances verified cases of accidents, illness, or other circumstances beyond the control of the student), for which a student may request withdrawal through the student petition process. After consultation with the instructor and with administrative approval, the grade may be recorded as a W rather than as a less than satisfactory or failing grade on the permanent academic record/transcript. In all other cases, after the 75% date, a student will receive a grade in the course.

Military withdrawal is available for students who are members of an active or reserve military service, and who receive orders compelling a withdrawal from courses. Students requesting military withdrawal must file a student petition and include supporting documentation.

Excused withdrawal is available when a student is permitted to withdraw from a course(s) due to specific events beyond the control of the student making his or her ability to complete a course(s) impractical. These events may include a job transfer outside the geographical region, an illness in the family where the student is the primary caregiver, when the student who is incarcerated in a California state prison or county jail is released from custody or involuntarily transferred before the end of the term, the student is the subject of an immigration action, or other extenuating circumstances. Excused withdrawal shall not be counted in progress probation and dismissal calculation. Excused withdrawal shall not be counted toward the permitted number of withdrawals or counted as an enrollment attempt.

Probation and Dismissal
There are two types of probation: academic and progress.

Academic Probation
A student who has attempted at least twelve (12) units is placed on academic probation if the student has earned a cumulative grade point average below 2.0.

Progress Probation
A student who has enrolled in a minimum of twelve (12) semester units is placed on progress probation when W, I, or NP grades are recorded in one-half or more of all units in which a student has enrolled.

Unit Limitation
A student on either academic or progress probation may be limited to 12 or fewer units, or to a course load recommended by the student's counselor.

Removal from Probation
A student on academic probation is removed from probation and achieves good standing when the student's cumulative grade point average is 2.0 or higher.

A student on progress probation is removed from probation and placed in good standing when less than half of the student's units are recorded as W, I, or NP.

Remedial Unit Limitation
The California Community Colleges Board of Governors has adopted regulations limiting the number of remedial course units a student may take to 30. These courses are usually numbered 1 through 99. Students may petition for a waiver to the 30-unit limitation through a counselor. However, federal financial aid does not allow a student to receive aid for more than 30 remedial units.

Transcripts
Order Transcripts Online
Current and former students can order transcripts and authorize the release of student records online. Students must submit a separate order for each Los Rios college they attended.

Order Transcripts Online

Unit/Academic Load
Per Los Rios Regulation R-7211, fifteen (15) units each semester is considered a full load. Twelve (12) units each semester is a minimum full-time load and is usually acceptable to qualify for scholarships, grants, loans, and holding student offices.
Fall/Spring Semester
Eighteen (18) units per semester is a maximum load. Unit limit shall be district-wide. A petition to exceed the maximum load must be submitted in writing to the college at which the additional units will be taken prior to registration. A student may petition up to a maximum of six (6) additional units district-wide through this process.

Summer Session
Eight (8) units per summer session is a maximum load. Unit limit shall be district-wide. A petition to exceed the maximum load must be submitted in writing to the college at which the additional units will be taken prior to registration. A student may petition up to a maximum of four (4) additional units district-wide through this process.

Special Considerations
Full governmental subsistence for veterans and dependents requires the unit load of twelve (12) units (with reduced benefit amounts dependent on the total number of enrolled units).

The following categories require the minimum unit load indicated:

- International students – twelve (12) units
- Student athletes – twelve (12) units, including kinesiology/physical education

Unit of Credit
Units of credit are assigned to courses based on the “Carnegie Unit,” which assigns one unit of credit for three hours of work by the student per week. Usually this means one hour of lecture or discussion led by the instructor and two hours of outside preparation by the student. In laboratory courses, three hours of work in the laboratory are normally assigned one unit of credit which may include some additional preparation outside of class time. Students can find the number of units of credit with each course description.
Enrollment Verification
| Cosumnes River College

Enrollment verification for child care, health insurance, or car insurance can be printed out via eServices or requested by fax or in-person. All other requests can be processed immediately by the National Student Clearinghouse for a fee.

Verifications for Child Care, Health Insurance, and Car Insurance

eServices

You can print or save an enrollment verification certificate for free through eServices (https://ps.losrios.edu/student/signon.html). From your eServices dashboard:

1. Click Student Center
2. Click Enrollment Verification (under Academics)
3. Follow the instructions to get to your printable verification

Fax and In-Person Requests

We do not accept verification requests over the phone. Faxed and in-person requests are processed in five to seven business days after we receive the request. We do not fax back verifications – all verifications must be picked up in person at Admissions and Records. You must provide a photo ID when you pick up your enrollment verification.

Other Enrollment and Degree Verifications

Requests from the following types of companies or individuals will be directed to the National Student Clearinghouse:

- Credit issuers
- Travel and consumer product companies
- Housing providers
- Scholarship providers
- Employers and employment agencies
- Verifications required by students or parents that do not include child care, health insurance, or car insurance

For your convenience, Los Rios has authorized the National Student Clearinghouse to act as its agent for verification of student enrollment and degree status. You can obtain an official Enrollment Verification Certificate at any time via the National Student Clearinghouse website at nscverifications.org (http://nscverifications.org/welcome-to-verification-services/).
Alternative Credit/Study Options | Cosumnes River College

In addition to regular classes, students may receive college credit when they participate in the following alternative credit and study options.

Advanced Placement (AP) Exams

Cosumnes River College grants credit for College Board Advanced Placement (AP) examinations. A student who meets the following requirements may receive credit for exams they successfully passed:

- Official copies of test scores are on file with Admissions and Records
- Student is in good standing, which is defined as having completed twelve (12) units of credit and having a minimum 2.0 grade point average (GPA)

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of AP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

Review the AP Credit Chart (https://crc.losrios.edu/ap-scores-chart) to see how Cosumnes River College grants credit for AP exams.

College-Level Examination Program (CLEP)

Cosumnes River College grants credit for College-Level Examination Program (CLEP) examinations. CLEP scores fulfill general education areas only; they do not fulfill graduation competencies, requirements for any major at Cosumnes River College, or enrollment limitations (such as prerequisite requirements) for any course at Cosumnes River College.

A student may receive credit for CLEP exams they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Visit College Board's College-Level Examination Program website (https://clep.collegeboard.org) to learn more.

CLEP scores are not accepted for transfer to the University of California. Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of CLEP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

Review the CLEP Credit Chart (https://crc.losrios.edu/clep-scores-chart) to see how Cosumnes River College grants credit for CLEP exams.

International Baccalaureate (IB) Tests

Cosumnes River College may award college credit for international baccalaureate (IB) higher-level course completion, if the course work is compatible with the college's curriculum. No credit will be granted for lower-level course work completed in the IB program.

A student who meets the following requirements may receive credit for IB tests they successfully passed:

- Official copies of test scores are on file with Admissions and Records
- Student is in good standing, which is defined as having completed twelve (12) units of credit and having a minimum 2.0 grade point average (GPA)

Review the IB Credit Chart (https://crc.losrios.edu/ib-scores-chart) to see how Cosumnes River College grants credit for IB tests.

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of IB scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.
Students who have earned credit from an IB test should not take a comparable college course because transfer credit will not be granted for both.

**Credit by Examination**

Credit by examination is a process by which students may earn credit in recognition of knowledge and skills gained from previous experience or training when such knowledge and skills are deemed to be substantially similar to the student learning outcomes of the course for which credit is being sought. A student may receive credit for some courses by passing an exam if they meet the following requirements:

- Completed 12 units at Cosumnes River College
- Have a cumulative GPA of 3.00 or better at Cosumnes River College

Under special circumstances these requirements may be waived by petition to the Dean of Student Services and Enrollment Management.

A maximum of 15 credit units of catalog courses may be earned through credit by examination. Credit by examination may not be applicable to all courses. Eligibility for credit by examination is not permissible under the following situations:

- The student has completed or enrolled in a more advanced course, which follows this course in sequence
- The course (or its equivalent) appears on the student's transcript with a grade other than a W
- The exam would duplicate coursework for which credit was granted previously
- The student does not meet the pre-requisite or co-requisite for the course

Under special circumstances these restrictions may be waived by petition to the Vice President of Student Services.

Please note that some four-year colleges and universities do not accept units granted through credit by examination. Students are advised to meet with a counselor for more information.

Please follow these steps to participate:

1. Find a professor who is willing to administer the exam. The examining instructor determines the scope and form of the exam.
2. Complete the appropriate paperwork at the Admissions and Records Office. Staff will verify your eligibility.
3. Have the examining professor sign the petition and schedule the examination.
4. Have the appropriate area dean sign the petition.
5. Return the completed petition to the Admissions and Records Office for enrollment in a test section and provide payment of appropriate enrollment fees.
6. Take the exam as scheduled. (The examining professor will submit a grade of "Pass" or "No Pass" to the Admissions and Records Office. See "Pass/No Pass" Grading for further information.)

Please note that all Cosumnes River College policies are in effect with respect to credit by examination, except as indicated here.

**Credit for Military Service**

Veterans may receive credit for military service if they present papers showing honorable discharge from active duty of one year or more in the United States armed forces.

**How to Apply**

After you have completed one semester at Cosumnes River College, submit a copy of your DD-214 (member copy 4) separation paper and a petition to the Admissions and Records Office.

You may be eligible to receive the following credit (if applicable):

- Three (3) units of living skills graduation requirements
- One (1) unit of elective credit

In some circumstances, veterans may also receive credit for satisfactory training completed in service school.

**Guidance from the American Council on Education**

Credit granted for military service is based on A Guide to the Evaluation of Educational Experiences in the Armed Services, published by the American Council on Education.
Students in the six-month reserve training program are not eligible for military credit. This is in accordance with the recommendation of the American Council on Education.

Students are encouraged to contact a counselor for more information.

Distance/Online Education

Cosumnes River College offers instruction via the internet. This includes online course sections where all work is carried out online, and partially online course sections where instruction is divided between online and in-person modalities.

To be successful in online courses, students need to be self-directed, motivated, and able to independently complete and electronically submit assignments on schedule. Students will also need reliable access to a computer and basic internet skills.

Online Classes

In online classes, classes meet online and all coursework is done online.

Partially Online or "Hybrid" Classes

Partially online classes feature a mix of online and in-person meetings and coursework. Class schedules will indicate the day/time of the in-person, on-campus class sessions.

Online Learning Platform

All online classes are offered through Canvas (https://canvas.losrios.edu), a cloud-based learning management system used by faculty and students within Los Rios Community College District.

Learn more about online education at Cosumnes River College (https://crc.losrios.edu/academics/online-education).

Experimental Offerings

An experimental offering is a course that is offered on a trial basis. Students enroll in experimental offerings through the regular registration process. Transfer institutions may not accept units earned in experimental offerings.

Honors Program and Honors Society

The Cosumnes River College Honors program is an enhanced transfer opportunity program designed specifically for academically-accomplished students and students seeking a challenge with the ability and desire for high achievement. Through its series of special Honors courses and co-curricular activities, the program provides opportunities for intellectual growth beyond those generally found in most lower division programs.

These one to three unit courses are intended to augment and enhance a student's knowledge and educational experience. In the broad plan of the program, some of these courses are linked to a particular course and are intended to provide in-depth, rigorous treatment of certain related topics. These classes may require concurrent or previous enrollment in another course. Prospective Honors Program students should possess the ability to think and work independently, write clearly and purposefully, and cooperate in the spirit of discovery and understanding.

Honors courses are special intensive courses in which students will confront and attempt to resolve difficult questions that arise in a careful study of the issues found in the discipline(s). Honors students are expected to research aspects of these questions and present their findings to the class in written form for seminar discussion. Field trips to attend events or to conduct research may be an integral part of the Honors course experience. Students who successfully complete units from Honors courses may be able to count these units as part of the Transfer Breadth Requirements. Students who complete 15 units or more in honors-designated courses will earn special recognition as an Honors Scholar, a distinction that may entitle the student to guaranteed transfer and scholarship opportunities at select transfer colleges and universities, including UCLA, in whose Transfer Alliance Program the Cosumnes River College Honors Program is a participating member.

Independent Study

An independent study course involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses, pursuant to an agreement among the college, faculty member, and student(s). Independent studies require regular meetings between the student and instructor. Additionally, the instructor may require examinations or other measures of evaluation, field trips, term papers, and other assignments.

Please note that some four-year colleges and universities do not accept units granted through independent study. Students are encouraged to meet with a counselor for more information.

For the appropriate petition and course proposal form, please contact Admissions and Records (https://crc.losrios.edu/admissions-records).

Reserve Officer Training Corps (ROTC)
Aerospace Studies
Air Force ROTC is available to Cosumnes River College students through a program offered at CSU Sacramento. There is no obligation to join the military to take the courses. Students may take courses to explore an interest in a military career. Two-, three-, and four-year programs are available, leading to a commission in the United States Air Force. Scholarships are available to qualified students. Classes are conducted at CSU Sacramento. Topics include military history, management, leadership, problem solving, ethics, public speaking, world politics, international relations, and current events.

To apply for the program or for more information, contact the Unit Admissions Officer at (916) 278-7315. It is recommended that applications be submitted no later than the first semester of the sophomore year.

Military Science
Army ROTC is available to Cosumnes River College students at CSU Sacramento. The Military Science Department offers hands-on training in management and leadership. There is no obligation to join the military by taking the course. The program stresses the following leadership dimensions: oral and written communications, oral presentations (formal briefings), initiative, sensitivity, influence, planning and organizing, delegation, administrative control, problem analysis, judgment, decisiveness, physical stamina, and mission accomplishment. Also stressed are current events, national and international politics, military affairs, ethics training and human relations with emphasis on eliminating racial and gender discrimination. Management and leadership are taught using the US Army as a model. Two- and three-year scholarships are available, covering up to $9,000 per year for tuition, $225 per semester for books and supplies, $200 per semester for lab fees, and $150 a month tax free stipend during the academic year.

To apply for the program or for more information, contact the Unit Admissions Officer at (916) 278-7682. It is recommended that applications be submitted no later than the first semester of the sophomore year.

Study Abroad
Study abroad can be an enlightening, maturing, and life-changing experience. Students are challenged to re-examine themselves, their attitudes, and their studies as they learn to understand new and different cultures. In cooperation with the American Institute for Foreign Study, Los Rios Community College District offers unique study opportunities in cities such as:

- London, England
- Barcelona, Spain
- Florence, Italy

Requirements
To study abroad, students must:

- Be at least 18 years old
- Be in good academic standing with 12 college units completed by the time you go abroad
- Have a minimum overall grade point average (GPA) of 2.25

During the 13-week Study Abroad program, all students take 12 units – a three-unit Life and Culture class, an additional Los Rios class, and two other classes from the list of offerings.

Financial Aid
Financial Aid is available for study abroad.

Upcoming Study Abroad Opportunities
Learn more about current and upcoming study abroad opportunities [here](https://crc.losrios.edu/study-abroad).

Work Experience and Internship Program
Work experience is an academic program in which students apply what they have learned in the classroom to a job or internship and work to earn college credits. There are two types of programs: vocational and general.

For more information, please visit the Work Experience and Internship Program [here](https://crc.losrios.edu/wexp).
Advanced Placement Test Scores
| Cosumnes River College

Students may earn credit for College Entrance Board Advanced Placement (AP) tests with scores of 3, 4, or 5. AP scores can be used to meet Cosumnes River College AA/AS general education requirements (2020-2021-catalog/while-you-are-here/alternative-credit/study-options/advanced-placement-test-scores#aa-as-ge), California State University (CSU) general education requirements (2020-2021-catalog/while-you-are-here/alternative-credit/study-options/advanced-placement-test-scores#csu-ge), and Intersegmental General Education Transfer Curriculum (IGETC) (2020-2021-catalog/while-you-are-here/alternative-credit/study-options/advanced-placement-test-scores#igetc).

A student may receive credit for AP exams they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of AP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

© The maximum UC credit for AP calculus exams is 8 quarter units or 5.3 semester units.

^ The maximum UC credit for both AP English tests is 8 quarter units or 5.3 semester units.

% AP test meets IGETC science course and lab requirement but only grants three units toward IGETC. Student will need to earn at least seven units in IGETC Area 5 to be certified.

$ Offered May 2013 and beyond.

¨ The maximum UC credit for all AP physics exams is 8 quarter units or 5.3 semester units.
**Students need to complete a course that covers California State and Local Government to complete CSU American Institutions requirement.**

For more information about transferring to the University of California (UC), see [how UC campuses accept AP credit](http://admission.universityofcalifornia.edu/counselors/exam-credit/ap-credits/index.html).
Cosumnes River College grants credit for College-Level Examination Program (CLEP) examinations. CLEP scores may be used to meet Cosumnes River College AA/AS general education requirements (/2020-2021-catalog/while-you-are-here/alternative-credit/study-options/college-level-examination-program-scores#aa-as-ge) and California State University (CSU) general education requirements (/2020-2021-catalog/while-you-are-here/alternative-credit/study-options/college-level-examination-program-scores#csu-ge). They do not fulfill graduation competencies, requirements for any major at Cosumnes River College, or enrollment limitations (such as prerequisite requirements) for any course at Cosumnes River College.

A student may receive credit for CLEP exams they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Visit [College Board’s College-Level Examination Program](https://clep.collegeboard.org/) website to learn more.

CLEP scores are not accepted for transfer to the University of California. Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of CLEP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

### Exceptions

Cosumnes River College does not offer credit for the following CLEP exams, and these exams do not satisfy associate degree general education requirements:

- College Composition
- College Composition – Modular
- College Mathematics
- English Composition (with or without essay)
- Financial Accounting
- Freshman College Composition
- German
- Information Systems and Computer Applications
- Introduction to Educational Psychology
- Introduction to Business Law
- Principles of Accounting
- Principles of Management
- Principles of Marketing
- Social Sciences and History

CLEP Credit Toward California State University General Education Requirements

This table describes how passing CLEP scores meet California State University (CSU) general education (GE) breadth requirements as well as how they translate into credit.

<table>
<thead>
<tr>
<th>CLEP EXAM</th>
<th>CLEP SCORE</th>
<th>CSU GE AREA</th>
<th>SEMESTER UNITS OF GE CREDIT</th>
<th>SEMESTER UNITS *</th>
<th>REMOVAL DATE FOR GE BREADTH **</th>
</tr>
</thead>
<tbody>
<tr>
<td>Western Civilization II</td>
<td>50</td>
<td>D</td>
<td>3</td>
<td>3</td>
<td>N/A</td>
</tr>
</tbody>
</table>

* These unit values are used only in determination of eligibility for admissions to CSU and should not be confused with the unit values applied toward GE Certification.

** Students seeking certification in GE Breadth prior to transfer must have passed the CLEP exam before this date.

*** If a student passes more than one CLEP examination in the same language other than English (such as two exams in Spanish), then only one examination may be applied to the baccalaureate (BA or BS). For each examination in a language other than English, a passing score of 50 is considered "Level I" and earns six units of credit towards the baccalaureate (BA or BS); the higher score listed for each test is considered "Level II" and earns additional units of credit and placement in Area C2 of GE Breadth, as noted.

Exceptions

CSU does not offer credit for the following CLEP exams, and these exams do not satisfy CSU GE breadth requirements:

- College Composition
- College Composition – Modular
- College Mathematics
- English Composition (with or without essay)
- Freshman College Composition
- Social Sciences and History
Cosumnes River College may award college credit for international baccalaureate (IB) higher-level (HL) course completion, if the course work is compatible with the college’s curriculum. IB test scores may be used to meet Cosumnes River College AA/AS general education requirements, California State University (CSU) general education requirements, and Intersegmental General Education Transfer Curriculum (IGETC). No credit will be granted for lower-level course work completed in the IB program.

A student may receive credit for IB tests they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of IB scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

Students who have earned credit from an IB exam should not take a comparable college course because transfer credit will not be granted for both.

College Safety and Security
| Cosumnes River College

At Cosumnes River College, we are committed to maintaining a safe learning environment and supporting an ongoing comprehensive safety program. The Los Rios Police Department (LRPD) employs sworn police officers who are certified through California Peace Officers Standards and Training (POST) and are responsible for protecting life and property across the district.

LRPD has excellent working relationships with other law enforcement agencies and emergency service providers in our neighboring communities. These strong partnerships help support more effective responses in emergency situations.

Learn more about Los Rios Police Department [here](https://police.losrios.edu).

  Each year, the Los Rios Police Department publishes the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Report.
Crime Prevention

Cosumnes River College

Cosumnes River College actively supports crime prevention through a number of programs, including:

Emergency Automobile Assistance

Though they are not mechanics, Los Rios Police officers are equipped and trained to start cars with dead batteries or unlock non-electric car doors. Proper identification is required for the performance of these services.

Firearms

California Penal Code Section 626.9 (h) prohibits the possession of a firearm on college grounds.

Alcohol

Consumption of, or being under the influence of, alcohol while on campus is strictly prohibited. Violators are subject to suspension, expulsion, and/or criminal prosecution (Los Rios Policy P-2443) (/shared/doc/board/policies/P-2443.pdf).

Emergency Telephones

Outdoor, emergency telephones have been installed at strategic locations throughout the campuses. These blue phones, when accessed, will automatically connect the caller to the Los Rios Police Department.

Illegal Drugs

Cosumnes River College is committed to being a drug-free campus. Violators will be subject to disciplinary procedures. The use, sale, or possession on campus of, or presence on campus under the influence of, any controlled substance is strictly prohibited. Violators are subject to suspension, expulsion, and/or criminal prosecution (Los Rios Policy P-2441) (/shared/doc/board/policies/P-2441.pdf) and (Los Rios Policy P-2443) (/shared/doc/board/policies/P-2443.pdf).

Children on Campus

It is not appropriate for children to attend classes with their parents. All children on campus must be under the direct supervision of a parent, guardian, or other authorized adult. Unattended or disruptive children will be reported to the proper authorities.

Parking

Vehicles that do not have a valid semester parking decal or daily permit properly displayed will be issued a parking citation. There is a $283 fine for parking in designated disabled spaces (including hatch marks next to disabled spaces) without a state-issued disabled decal or plate.

Sexual Harassment

Sexual harassment in any situation is unacceptable and is in violation of state and federal laws and regulations. Corrective action will be taken where evidence of sexual harassment is found (Los Rios Policy P-2424) (/shared/doc/board/policies/P-2424.pdf).
Los Rios Police Department (LRPD) enforces the California Vehicle Code (CVC) and board-approved regulations on grounds designated for vehicle parking and traffic.

For more information, see parking regulations (https://police.losrios.edu/parking-resources/parking-regulations).
To report an on-campus crime or incident, see [crime and reporting](https://police.losrios.edu/crime-and-reporting) on the Los Rios Police Department website.
Clery Report | Cosumnes River College

Each year, the Los Rios Police Department publishes the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Report (also known as the Annual Clery Report). This report includes information about our safety and security policies and specific crime statistics.

Academic Rights and Responsibilities | Cosumnes River College

The classroom (including laboratories, field trips, independent study, and so on) is the essential part of any college where freedom to learn should flourish. The instructor has the responsibility for the manner of instruction and the conduct of the classroom. The instructor should not act in any way that denies the rights of students as set forth below (Los Rios Regulation R-2411 (/shared/doc/board/regulations/R-2411.pdf)).

Student Academic Rights

Student Publications

In preparing student publications, the editorial staff and faculty advisors shall be free from censorship and advance copy approval except as provided by published district policy, statutes, or college regulation. These publications should do the following:

- Adhere to canons of responsible journalism, such as avoidance of libel, indecency, undocumented allegations, attacks on personal integrity, and the techniques of harassment and innuendo.
- State on the editorial page that the opinions expressed are not necessarily those of the college or the student body.

Support Causes

Students shall have the right to:

- Take stands on issues
- Examine and discuss questions of interest to them
- Support causes by orderly means which are in harmony with the regular functioning of the institution

Free Assembly and Free Speech

Students shall have the right to hear speakers on any subject and college recognized student organizations shall have the right to present speakers on any subject. In addition, students shall have the right of free assembly on each campus subject to regulations that assure the regular functioning of the institution.

The policies and regulations shall include reasonable provisions for the time, place, and manner of conducting these activities, but shall not prohibit the right of students to exercise free expression including, but not limited to, the use of bulletin boards, the distribution of printed materials or petitions, and the wearing of buttons, badges, and other insignia.

Expression which is obscene, libelous, or slanderous according to current legal standards, or which so incites students as to create a clear and present danger of the commission of unlawful acts on college premises, or the violation of lawful district or college regulations, or the substantial disruption of the orderly operation of the college, shall be prohibited.

Free to Organize

Students shall have the right to form an organization around any particular interest. This right includes the freedom to organize and to join student organizations subject to published college and district regulations.

Voice in Decision-Making

Students shall have the right to be informed on all college matters that can be shown to be directly relevant to them by having a voice in decision making that affects their academic future, with the exception of staff appointment, termination, and tenure.

In case of conflict in determining what college matters are relevant to students, the determination will be made by a college-designated student, faculty, and administrative committee.
In addition, student representatives shall be members of all faculty and administrative committees related to students' concerns; such student representatives shall have a vote as committee members.

Confidentiality

Students shall have the right to have their academic records treated in a confidential and responsible manner with due regard to the personal nature of the information these records contain. Students' records will be released only on the written consent of the students or as provided by law. Learn more about access to student records (https://crc.losrios.edu/access-to-student-records).

Academic Evaluation

Students shall have the right of protection against prejudiced or capricious academic evaluation. At the same time, students are responsible for maintaining standards of academic performance established in advance for each course in which they are enrolled.

Grievance Procedure

Students shall have the right to file a grievance as outlined in Los Rios Regulation R-2412 (/shared/doc/board/regulations/R-2412.pdf), in the event of an alleged breach of their rights. Cosumnes River College's designated grievance officer will hear grievances of students who believe their academic rights have been denied or violated.

Student Responsibilities

The Expectations of the College

Admission to college assumes the expectation that the student will:

- Be a responsible member of the college community
- Obey the law
- Comply with the published rules and regulations of the college
- Respect the rights, privileges, and property of the other members of the college community
- Not interfere with legitimate college affairs

Students enrolled in a class are responsible for meeting standards of performance and conduct established by the Los Rios Community College District and the instructor. Students are responsible for registering, "adding," and "dropping" classes in a timely fashion to make sure that other students have an opportunity to take classes. Students are responsible for completing and submitting all class assignments, examinations, tests, projects, reports, and so on by scheduled due dates, or face penalties.

If any problem arises regarding coursework or attendance, the student will be held responsible for initiating communication and contact with the instructor. In addition, students will be held responsible for behavior and conduct adverse to the preservation of order as established by the college and the instructor. Students are responsible for meeting their degree requirements as provided in the college catalog.

Students also have the responsibility to use information technology resources effectively. Each user has the responsibility to:

- Use the resources appropriately and efficiently
- Respect the freedom and privacy of others
- Protect the stability and security of the resources
- Understand and fully abide by established college policies and applicable public laws

In the case of student conduct that involves an alleged or proven violation of criminal law, the disciplinary authority of the college will not be used to duplicate the function of criminal authority. Disciplinary action may be taken if the conduct also involves a violation of district or college policy.
Access to Student Records (FERPA)  
| Cosumnes River College

Use and Release of Student Information

The Family Educational Rights and Privacy Act of 1974 (FERPA) was designed to protect the privacy of educational records and to establish the rights of students to inspect and review their educational records. It also provides control over the release of educational record information. The original intent of this legislation was to keep elementary and high school records private and to give parents access to their child's school records.

After a student turns eighteen or attends an institution of higher education (a college or university), the rights of access to the student's records transfer to the student. This means that all academic information regarding a college student goes directly to the student unless the student has given specific, written permission to release that information to someone else.

While parents understandably have an interest in their child's academic progress, they are not automatically granted access to a student's records without written consent of the student. Parents are encouraged to consult with the student if academic information is needed.

A student can give permission for a third party to access their records by filing a Student Consent for Release of Records Form (/shared/doc/admissions-records/forms/student-consent-for-release-of-student-records.pdf) (PDF) with the Admissions and Records office.
Alcohol, Drug, and Smoking Policy | Cosumnes River College

Alcohol and Drug Policy

The abuse of illicit drugs and alcohol disrupts classes, compromises your physical and mental health, subjects you to criminal penalties, and impairs your ability to benefit from the learning experience. We therefore ask the college community to actively support a drug- and alcohol-free learning environment by knowing and making others aware of college policies and the substantial health and legal consequences of abuse.

District Policy

Policy P-2443: Drug and Alcohol-Free Workplace and College Premises (/shared/doc/board/policies/P-2443.pdf) states that the district “is committed to maintaining a drug- and alcohol-free workplace in accordance with the requirements of the US Drug-Free Workplace Act of 1988, and a drug- and alcohol-free college environment for students and employees in accordance with the requirements of the Drug-Free Schools and Community Act Amendment of 1989.”

Legal Sanctions

The Los Rios Standards of Student Conduct prohibit the use, sale, or possession on campus of, or presence on campus under the influence of, any controlled substance. Controlled substances include cocaine, marijuana, LSD, heroin, methadone, mescaline, peyote, and methaqualone, among others.

If you abuse drugs or alcohol on campus, or appear on campus or at a college-sponsored function under the influence of drugs or alcohol, you can be suspended, expelled, and/or criminally prosecuted. The penalties for the more common offenses are:

- Possession or use of alcohol: year in jail and/or fine
- Possession of marijuana: criminal citation and fine
- Possession of cocaine: imprisonment in a state prison
- Sales of any illegal drug: imprisonment in a state prison
- Possession or use of alcohol by a minor: one year in jail and/or fine
- If you are a student employee, you may be terminated
- You are required to report any convictions within five days of the occurrence
- You will be ineligible for financial aid

Smoking Policy

Per section 2.23 of Regulation R-1411: Use of Facilities (/shared/doc/board/regulations/R-1411.pdf), smoking, vaping, and the use of tobacco is prohibited on all district/college property. Smoking is defined as inhaling, exhaling, burning, or carrying any lighted or heated cigar, cigarette, pipe, or any other lighted or heated tobacco or other product intended for inhalation, in any matter or in any form. Smoking also includes the use of e-cigarettes. An e-cigarette is any oral device that provides a vapor of nicotine or any other substance for inhalation. E-cigarettes do not include products approved by the United States Department of Food and Drug Administration for medical treatment.
Computer and Internet Use Policy
| Cosumnes River College

Computer Use Policy

The following rules apply to all computer labs on campus. Specific labs may have additional rules.

General Rules

- Equipment use in the lab is intended for class assignments only – use of computers is closely monitored for compliance with acceptable use standards
- Computers are available on a first-come, first-served basis
- Food and/or drinks (including water bottles) are not allowed in computer labs at any time
- Children (under 18) are not allowed to use computer equipment unless they are current Cosumnes River College students
- Report problems with computers and/or printers to computer lab staff
- A valid login may be used for assigned purposes only – sharing access with others is not permitted
- All downloading and saving must be to removable media
- Playing games on college computers is prohibited except for class assignments
- When you're done, log off the computer but don't turn the computer off
- Directions from any lab assistant or instructor concerning equipment/facilities or student conduct must be followed in order to continue use of the facilities

Respect Those Around You

- Bring your own headphones for sound control.
- Pets are not allowed, except for service animals.
- Keep noise to a minimum
- Use one workstation per person
- Keep backpacks out of the walkways
- Turn off or silence cell phones and pagers and answer phone calls outside of the lab

Software

- Software may not be copied from computers or network drives
- Installing software or games on computers is prohibited

Internet Use Policy

Internet access is limited to classroom assignments only.

The acceptable use standards concerning internet use must be followed where applicable. The following activities are not allowed:

- Transmitting unsolicited information, which contains profane language or panders to bigotry, sexism, or other forms of discrimination
- Using the internet to gain unauthorized access to any computer
- Engaging in personal attacks (writing bullying, intimidating, threatening, or harassing entries)
- Making threats (directed towards others or yourself) without expecting the recipients of those threats, the college, and the police to consider them real
- Transmitting information that contains obscene, indecent, lewd, or lascivious material or other material that explicitly or implicitly refers to sexual conduct. This includes displaying such material where other individuals could potentially view it
- Inappropriate mass mailing, which includes multiple mailing to news groups, mailing lists, or individuals

Attempts by students to obtain, manipulate, delete, or change the contents of another user's files, passwords, etc. are regarded as infractions of the California Computer Crime Penal Code. Attempts to "break" the operating system constitute a felony under this law.
Copyright and Piracy Policy
| Cosumnes River College

What is a Copyright?

A copyright is a legal protection that gives the developer of an original piece of work (intellectual or artistic) exclusive rights for a certain time period. Copyright infringement is the unauthorized use of copyrighted material.

What is Piracy?

Piracy is the recreational downloading of copyrighted materials. Piracy is a violation of both federal law and college policy. The Recording Industry Association of America (RIAA) and Motion Pictures Association of America (MPAAP) have been cracking down on piracy in the US and targeting university and college networks, since this is where the highest amount of copyright infringements occur.

What is Peer-to-Peer (P2P) Software?

Peer-to-Peer (P2P) software allows users to download and distribute files from computer to computer across networks using P2P protocols, regardless of whether the user has paid for the files. When users have not paid for these files, they break federal and international copyright laws.

Piracy is not the only downside of using P2P software. P2P software allows users to access your computer and potentially hack into your private data. The result is exposure of your computer to significant security risks from viruses, worms, and hackers that could lead to possible loss of data, identity theft, and other liabilities.

College Actions for Violation

Sharing music, videos, or other copyrighted materials using Peer-to-Peer (P2P) applications over the network exposes you and anyone you share files with to legal action.

If a notice is sent from a trusted agency to Cosumnes River College, then the student’s account will be blocked from accessing the WiFi network. The student in question may have to go through the college’s disciplinary process to regain access.

Summary of Civil and Criminal Penalties for Violation of Federal Copyright Laws

Copyright infringement is the act of exercising, without permission or legal authority, one or more of the exclusive rights granted to the copyright owner under section 106 of the Copyright Act (Title 17 of the United States Code). These rights include the right to reproduce or distribute a copyrighted work. In the file-sharing context, downloading or uploading substantial parts of a copyrighted work without authority constitutes an infringement.

Penalties for copyright infringement include civil and criminal penalties. In general, anyone found liable for civil copyright infringement may be ordered to pay either actual damages or “statutory” damages affixed at not less than $750 and not more than $30,000 per work infringed. For “willful” infringement, a court may award up to $150,000 per work infringed. A court can, in its discretion, also assess costs and attorneys’ fees. For details, see Title 17, United States Code, Sections 504, 505.

Willful copyright infringement can also result in criminal penalties, including imprisonment of up to five years and fines of up to $250,000 per offense.

Disciplinary Procedures and Due Process | Cosumnes River College

The following are the disciplinary and due process procedures for when a student is referred to the Office of Student Conduct.

1. A student who is referred for discipline is required to meet with the Student Conduct Officer. This referral means the student's alleged behavior is believed to have been a violation of the Los Rios Student Standards of Contact.

2. The student will receive a certified letter via US standard mail notifying them of their referral. In the notification, the student is instructed to make an appointment for an investigative meeting with the Student Conduct Officer.

3. At the informal, investigative meeting, the Student Conduct Officer shall interview the student for the purpose of discussing the alleged misconduct and the disciplinary action that should be taken (if any).

4. At the investigative meeting, the parties shall have the right to present statements, testimony, evidence, and witnesses, except that neither party shall have the right to be represented by an attorney.

5. The investigative meeting is mandatory. If the student fails to make an appointment and/or does not attend the meeting, then the Student Conduct Officer may review the case and initiate disciplinary action without input from the student.

6. After the investigative meeting, the Student Conduct Officer may initiate disciplinary action by filing a notice with the Vice President of Student Services and serving such notice on the student charged. This decision depends entirely on the information obtained during the investigation.

7. The student has the right to request an appeal to the disciplinary action with the Vice President of Student Services no later than seven (7) days after the service of the notice of disciplinary action. A copy of the appeal form will be mailed to you along with your notice of disciplinary action.

8. After an appeal hearing, a written decision will be mailed to the student from the Office of the President within ten days of the conclusion of the hearing.

9. At this point, the final decision for disciplinary action rests with the college president. The president may approve, reject, or modify the written decision. The decision of the college president for disciplinary action is final.

Refer to Regulation R-2442: Due Process (/shared/doc/board/regulations/R-2442.pdf) for complete information regarding student standards of conduct and due process.

Contact

For additional information on student conduct, please contact the Student Conduct Officer:

Shannon Cooper (Dean, Counseling and Student Services)
Email: coopers@crc.losrios.edu (mailto:coopers@crc.losrios.edu)
Phone: (916) 691-7350
Cosumnes River College's Honor Code serves as a bridge between the catalog's formal treatment of academic integrity and the day-to-day decisions of the members of our academic community. Its focus is on core academic values, the appropriate expression of those values in behavior, and the way those values create and sustain our academic community. It is intended as a straightforward tool for communicating and clarifying the college's fundamental expectations. It is also intended to be used frequently and easily.

Suggested Honor Code Uses

- As a syllabic supplement
- In conjunction with major assignments
- In conjunction with field trips/special events
- As a classroom management tool
- As documentation in the context of:
  - Referrals for 'Student Code of Conduct' violations
  - Grievance processes
  - Student disciplinary appeal processes

I understand that Cosumnes River College (CRC) values academic integrity. Academic integrity requires:

**Honesty**, which means:
- A commitment to truthfulness
- The refusal to steal or mislead, cheat or plagiarize

**Fairness**, which means:
- The willingness to treat others as I would wish to be treated upon careful consideration

**Respect**, which means valuing, in attitude and practice:
- All human beings
- Myself
- My community at CRC and beyond

**Responsibility**, which means:
- Recognizing that the quality of a CRC education and the quality of the CRC student experience depend upon my behavior
- Accepting, at all times, the consequences of my actions

I understand that I, as a member of the Cosumnes River College community, am responsible for upholding this value, supporting academic quality, academic rigor, and an appropriate college atmosphere.

* This code is modeled after that of Santa Monica Community College, Santa Monica, California.
Plagiarism and Cheating Policy
| Cosumnes River College

Academic Integrity and Responsibility

Academic integrity and responsibility mean acting honestly, conscientiously, and honorably in all academic endeavors. Students are accountable for all that they say and write. Since trust is the foundation of an intellectual community, and since student work is the basis for instructors to evaluate student performance in courses, students should not misrepresent their work nor give or receive unauthorized assistance.

Academic Dishonesty

In contrast to academic integrity and responsibility, academic dishonesty takes the form of plagiarism and/or cheating.

Plagiarism

The word plagiarism comes from the Latin word “plagiarius,” meaning kidnapper. Plagiarism is generally the taking of words, sentences, organization, and ideas from another source without acknowledging that source.

Plagiarism may include:

- Submitting papers, examinations, or assignments written/completed entirely or in part by others
- Directly copying portions of another's work without enclosing the copied passage in quotation marks for written work or without citing appropriately in an oral presentation and without acknowledging the source in the appropriate scholarly convention whether the work is presented in written or oral form
- Using a unique term or concept without acknowledging the source
- Paraphrasing or summarizing a source’s ideas without acknowledging the source
- Replicating a visual presentation, representation, or performance without acknowledging the source

Cheating

Cheating is similar to plagiarism in that it involves representing another's work as one's own. However, cheating often involves more overtly deceptive or fraudulent acts of academic dishonesty designed to gain credit for academic work that is not one's own.

Cheating may include:

- Giving or receiving unauthorized assistance during an examination
- Fabricating or altering a source of data in a laboratory or experiment
- Collaborating with others when collaboration is not permitted, or when the contributions of others are not made clear
- Using unauthorized materials or aids during an examination, including calculators, dictionaries, or information accessed via any electronic devices
- Acquiring, without permission, tests or other academic material belonging to a member of the college faculty or staff
In compliance with the Student Right-to-Know and Campus Security Act of 1990, completion and transfer rates for students attending Cosumnes River College can be found on the California Community College State Chancellor's Office Student Right-to-Know Rate Disclosure Website (http://srtk.cccco.edu/index.asp).
Service Animals on Campus
| Cosumnes River College

Students and employees with a disability* who need a service animal may use a service animal (including a service animal in training) on district and college property. Therapy animals and pets are not allowed.

*Disability must be consistent with guidelines set forth by the Americans with Disabilities Act (ADA) and the Fair Employment and Housing Act (FEHA).

Service Animal Guidelines

Service animals are subject to the following guidelines:

1. A service animal is any dog or a miniature horse that is trained to do work or perform tasks for an individual with a disability.

2. Faculty, staff or student owners of service animals that wish to bring the animal to campus, are requested, but not required, to register their service animal with the Vice President of Student Services or Vice President of Administrative Services. Registration provides a quick way to demonstrate the service animal is properly on campus.

3. If owner applies for registration, owner must provide documentation of their service animal’s current shot/vaccination records at the time of registration. Visitors should check in with the Vice President’s offices.

4. If owner applies for registration, owner must provide documentation of appropriate licenses.

5. If owner applies for registration, owner should carry proof of service animal registration when accompanied by that service animal on campus.

6. The service animal must be in good health, and free of fleas and external parasites.

7. The service animal must be on a leash at all times.

8. Owner is responsible for all cleanup of animal feces.

9. Service animals that disrupt the learning environment and the ability of others to learn may be excluded from campus.

10. Service animals that are ill, unclean, noisy, or bedraggled will not be allowed on campus.

11. Service animals that show unprovoked aggressive tendencies or are deemed potentially dangerous will not be allowed on campus.

12. Service animals are not permitted to be in the following areas: mechanical rooms/custodial closets, any room where protective gear is worn, or any room that poses a potential danger to the animal.

13. Owner will be financially responsible for any damage or cleaning costs resulting from the animal being brought on to campus. Animals that cause damage may be excluded from the campus.

Individuals who bring a service animal to campus must extend courtesy and respect to colleagues, students, and visitors in the area. Owners are required to keep service animals on a leash and should consider safety, health, and the possible fears others may have in the presence of animals.
Social Media Policy | Cosumnes River College

Social Media Participation Guidelines

As an institution of higher learning, Cosumnes River College – by its very nature – embraces the free and open exchange of ideas. To that end, we are committed to the community's First Amendment rights and the core values of free speech.

We believe in fostering a thriving online community. We support the various channels of social networking – Facebook, Twitter, YouTube, Instagram, and so on – as valuable tools for engaging students, staff, faculty, alumni, friends, and supporters in a constructive two-way dialogue about Cosumnes River College and its mission.

At the same time, the long-term value, vibrancy, and success of any social media community depends on a shared philosophy of how to behave. It's important that members of our community become familiar with Facebook's Terms of Service (https://www.facebook.com/legal/terms), Twitter's Rules and Policies (https://help.twitter.com/en/rules-and-policies), YouTube's Policies (https://www.youtube.com/about/policies/#community-guidelines), Instagram's Terms of Use (https://help.instagram.com/58066965581870), and similar support sites for social media. The emphasis for all participants – including site administrators – should always be transparency, honesty, respect, and civility.

All content, information, and views expressed on social media belong to the individuals posting the content. These views do not necessarily reflect the official policies or positions of the college, district, or Board of Trustees. We are not responsible for unanswered posts or inaccurate information posted by others.

Here are guidelines for engaging in Cosumnes River College social media platforms:

- Be respectful of the rights and opinions of others. Be willing to agree to disagree and move on.
- Stay on topic. Our social media sites are established as forums for the open and honest discussion of matters and developments related to – and limited to – our mission (https://crc.losrios.edu/about-us/our-values).
- Be transparent and honest.
- Add value. Be part of the conversation but don't take it over.
- Avoid hateful speech, personal attacks, flaming, profanity, vulgarity, pornography, nudity, and abusive language.
- Keep personal information (for example, your phone number and address) out of your posts.
- Think before you post. Almost everything you write or post to a social media site – words, pictures, video – is public or can be discovered. If you post on any of our social media sites, then you consent that what you post can be published and you waive any expectation of privacy regarding the post. What you choose to add to the conversation today will live on long after the subject matter has come and gone as a topic of conversation.
- We encourage you to post comments and “like” articles, photos, and videos you enjoy.

On our Facebook, Twitter, YouTube, and Instagram pages and other social media platforms, our goal is to post interesting, entertaining, and educational content. We welcome your comments and suggestions. We encourage conversation and dialogue, but we want to ensure a respectful online environment and invigorating conversation for the broader college community. Our page administrators review posts and comments regularly to ensure any issues or concerns are addressed in a timely manner.

We may or may not reply to comments, but if it's provocative, fair, and insightful, chances are others will engage in the conversation.

We reserve the right to determine and remove from Cosumnes River College social media sites any of the following:

- Comments, links, images, or videos that are illegal or encourage illegal activity, or are obscene, defamatory/libelous/slanderous, indecent, lewd, lascivious, sexually harassing or explicit in nature, or pose risks to the health or safety of individuals
- Comments that personally attack or threaten any person
- For students, anything that would violate District policies regarding student regulations (https://losrios.edu/about-los-rios/board-of-trustees/policies-and-regulations)
- For staff and faculty, anything that would violate District policies regarding staff and faculty regulations (https://losrios.edu/about-los-rios/board-of-trustees/policies-and-regulations)
- Successive off-topic posts by one or more individuals or groups
- Repetitive posts copied and pasted or duplicated by one or more individuals or groups
- Solicitations or advertisements
- Any materials that infringe upon the intellectual property or other rights of any third party
Standards of Conduct  
| Cosumnes River College

Code of Conduct

A student who enrolls at Cosumnes River College may rightfully expect that students, faculty, and administrators will maintain an environment in which there is freedom to learn.

Student conduct must comply with federal and state laws, college rules and regulations, and Regulation R-2441: Standards of Conduct (/shared/doc/board/regulations/R-2441.pdf). Students who violate such rules and regulations are subject to disciplinary action.

Disciplinary Offenses

Any student found to have committed, or to have attempted to commit, the following misconduct is subject to appropriate disciplinary action:

- Continued disruptive behavior, continued willful disobedience, habitual profanity or vulgarity, or the open and persistent defiance the authority of, or persistent abuse of, members of the college community
- Assault, battery, or any threat of force or violence upon members of the college community
- Willful misconduct which results in injury or death to members of the college community, or which results in cutting, defacing, or other injury to any real or personal property owned by the district
- The use, sale, or possession on campus of, or presence on campus under the influence of, any controlled substance (See alcohol, drug, and smoking policies)
- Willful or persistent smoking in any area where smoking has been prohibited by law or district policy (See alcohol, drug, and smoking policies)
- Persistent, serious misconduct where other means of correction have failed to bring about proper conduct
- Violation of College rules and regulations including those concerning student organizations, the use of college facilities, or the time, place and manner of public expression and distribution of materials
- Obstruction or disruption of teaching, research, administrative disciplinary procedures or other college activities, including its community service activity, or of other authorized activities on college-controlled premises
- Theft of or non-accidental damage to property of the college or a member of the college community while on campus or at college-sponsored events
- Unauthorized entry to or use of college facilities
- Dishonesty, such as cheating, plagiarism, or furnishing false information to the college; forgery, alteration, or misuse of college documents, records, or identifications (See plagiarism and cheating policies)
- Knowing possession or use of explosives, dangerous chemicals or deadly weapons on college property or at a college function without prior authorization of the college president or designated representative
- Use, possession, distribution or being under the influence of alcoholic beverages, narcotics or dangerous drugs on college property or at college-sponsored events (See alcohol, drug, and smoking policies)
- Soliciting or assisting another to do any act which would subject a student to expulsion, suspension, probation or other discipline pursuant to Regulation R-2441: Standards of Conduct
- Violation of any order of a college president, notice of which has been given prior to such violation, and which order is not inconsistent with any of the other provisions of this policy. This notice may be given by publication in the college newspaper, by posting on an official bulletin board designated for this purpose or by any other means reasonably calculated to inform students of its provisions.
- Attempting to commit an act that would be cause for disciplinary action identified above
Student Grievance and Class-Related Concerns | Cosumnes River College

Steps to Resolution

1. Students should speak with their professor about the concern.
2. Students who feel as though they are unable to speak with their professor or resolve the situation, should then contact the instructional division area dean.

Note: Most complaints, grievances, or disciplinary matters should be resolved at the campus level. This is the quickest and most successful way of resolving issues involving the college. You are encouraged to work through the campus complaint process first.

Contact

For information on how to file a formal grievance, please contact the Student Grievance Officer:

Yolanda Garcia (Dean, Student Services & Enrollment Management)
Email: yolanda.garcia@crc.losrios.edu
Phone: (916) 691-7333

Additional Grievance Information

Issues that are not resolved at the college or district level may be presented via resources provided by the California Community Colleges Chancellor's Office. Complainants are encouraged to use the official form provided by the Chancellor's office (https://www.cccco.edu/Complaint-Process-Notice), however, that form is not required and complaints will not be considered defective or rejected if you do not use the form.

A student may file a grievance or grieve an action or decision of the district or one of its colleges when the student's status and/or rights have been adversely affected.

Grievances relating to grades are subject to Education Code Section 76224(a), which reads:

"When grades are given for any course of instruction taught in a community college district, the grade given to each student shall be the grade determined by the instructor of the course and the determination of the student's grade by the instructor, in the absence of mistake, fraud, bad faith, or incompetence, shall be final."

In addition to complaints being filed by students or employees, complaints may be initiated by other individuals or entities, such as a family member, representative, organization, or other third party wishing to file on behalf of an individual or group alleged to have suffered unlawful discrimination or harassment (Los Rios Regulation R-2423 (/shared/doc/board/regulations/R-2423.pdf)).

Equal Opportunity
| Cosumnes River College

Equal Opportunity is the Law

Cosumnes River College is an equal opportunity employer/program. Auxiliary aids and services are available upon request to individuals with disabilities through Disability Support Programs and Services (https://crc.losrios.edu/dsps).

As a recipient of federal financial assistance, it is against the law for Cosumnes River College to discriminate against any individual in the US based on the following: race, color, religion, sex (including pregnancy, childbirth, and related medical conditions, sex stereotyping, transgender status, and gender identity), national origin (including limited English proficiency), age, disability, or political affiliation or belief, or, against any beneficiary of, applicant to, or participant in programs financially assisted under Title I of the Workforce Innovation and Opportunity Act, on the basis of the individual’s citizenship status or participation in any WIOA Title I-financially assisted program or activity.

Cosumnes River College must not discriminate in any of the following areas:

- Deciding who will be admitted, or have access, to any WIOA Title I-financially assisted program or activity
- Providing opportunities in, or treating any person with regard to, such a program or activity
- Making employment decisions in the administration of, or in connection with, such a program or activity

Recipients of federal financial assistance must take reasonable steps to ensure that communications with individuals are as effective as communications with others. This means that, upon request and at no cost to the individual, Cosumnes River College is required to provide appropriate auxiliary aids and services to qualified individuals with disabilities.

What to Do If You Believe You Have Experienced Discrimination

If you think that you have been subjected to discrimination under a Workforce Innovation and Opportunity Act (WIOA) Title I financially assisted program or activity, then you may file a complaint within 180 days from the date of the alleged violation with either Cosumnes River College’s Equal Opportunity Officer (or the person whom the recipient has designated for this purpose) or the Civil Rights Center.

Cosumnes River College Equity Officer

Email: equity@crc.losrios.edu

Phone: (916) 691-7740

Civil Rights Center (https://www.dol.gov/agencies/oasam/centers-offices/civil-rights-center)

US Department of Labor
200 Constitution Avenue NW, Room N-4123
Washington, DC 20210

If you file your complaint with Cosumnes River College, then you must wait either until Cosumnes River College issues a written Notice of Final Action, or until 90 days have passed (whichever is sooner), before filing with the Civil Rights Center (see address above).

If Cosumnes River College does not give you a written Notice of Final Action within 90 days of the day on which you filed your complaint, then you may file a complaint with Civil Rights Center before receiving that notice. However, you must file your Civil Rights Center complaint within 30 days of the 90-day deadline (in other words, within 120 days after the day on which you filed your complaint with the recipient).

If Cosumnes River College does give you a written Notice of Final Action on your complaint, but you are dissatisfied with the decision or resolution, then you may file a complaint with the Civil Rights Center. You must file your Civil Rights Center complaint within 30 days of the date on which you received the Notice of Final Action.

La Igualdad De Oportunidades Es La Ley
Es contra la ley que este beneficiario de asistencia financiera federal discrimine de la siguiente manera: contra cualquier individuo en los Estados Unidos, sobre la base de raza, color, religión, sexo (incluyendo embarazo, parto y afecciones médicas relacionadas, estereotipos sexuales, estatus de transexuales e identidad de género), origen nacional (incluyendo la competencia limitada en inglés), edad, incapacidad, o afiliación o creencia política o contra cualquier beneficiario de, solicitante o participante en programas con asistencia financiera bajo el Título 1 del Workforce Innovation and Opportunity Act (WIOA), sobre la base del estatus de ciudadanía del individuo o la participación en cualquier programa o actividad con asistencia financiera del Título de WIOA.

El destinatario no debe discriminar en ninguna de las siguientes áreas: decidir quién será admitido, o tendrá acceso, a cualquier programa o actividad con asistencia financiera del Título 1 de WIOA; proporcionar oportunidades o el tratar a cualquier persona con respeto a dicho programa o actividad; o, tomar decisiones de empleo en la administración de, o en relación con, tal programa o actividad.

Los destinarios de la asistencia financiera federal deben tomar medidas razonables para garantizar que las comunicaciones con las personas sean tan efectivas como las comunicaciones con los demás. Esto significa que, previa solicitud y sin costo para el individuo, se requiere que los destinarios proporcionen ayuda y servicios auxiliares adecuados a personas calificadas con discapacidades.

Qué Hacer Si Usted Cree Que Ha Experimentado Discriminación

Si usted piensa que ha sido sometido a discriminación bajo una ley de Workforce Innovation and Opportunity Act I (WIOA) Título I programa o actividad asistida financieramente, usted puede presentar una queja dentro de 180 días a partir de la fecha de la presunta violación con cualquier.

El funcionario de Igualdad de Oportunidades del destinario (o la persona a la que el destinatario ha designado para este propósito):

Cosumnes River College Oficial de Equidad
Email: equity@crc.losrios.edu
Teléfono: (916) 691-7740

Civil Rights Center (https://www.dol.gov/agencies/oasam/centers-offices/civil-rights-center)
US Department of Labor
200 Constitution Avenue NW, Room N-4123
Washington, DC 20210

Si presenta su queja con el destinatario, debe esperar hasta que el destinatario emita una Notificación por escrito de la Acción Final. o hasta que hayan pasado 90 días (lo que ocurra primero), antes de presentar su queja con el Civil Rights Center (véase la dirección anterior).

Si el destinatario no le da una Notificación por escrito de la Acción Final dentro de los 90 días del día en que usted presento su queja, usted puede presentar una queja ante el Civil Rights Center antes de recibir ese aviso. Sin embargo, usted debe presentar su queja de Civil Rights Center dentro de 30 días de la fecha límite de 90 días (en otras palabras, dentro de los 120 días después del día en que usted presento su queja con el destinatario).

Si el destinatario le da una Notificación por escrito de la Acción Final sobre su queja, pero usted no está satisfecho con la decisión o resolución, usted puede presentar una queja ante el Civil Rights Center. Usted debe presentar su queja de Civil Rights Center dentro de 30 días de la fecha en que recibió Notificación de le Acción Final.
At Cosumnes River College, we value equity and diversity. That's why we work toward just and fair inclusion into a society in which all people can participate, prosper, and reach their full potential.

No person shall be unlawfully discriminated against, harassed, or excluded from any benefits, activities, or programs because they possess of any of the following characteristics (actual or perceived):

- Ethnic group identification
- Race or color
- Sex, gender, gender identity, or gender expression
- Pregnancy or childbirth-related condition
- Sexual orientation or sexual identity
- Religion or religious creed
- Age (over forty)
- National origin or ancestry
- Physical or mental disability
- Medical condition
- Political affiliation or belief
- Military and veteran status
- Marital status

In addition, retaliation against a person who files a complaint, refers a matter for investigation, participates in an investigation, or serves as an advocate for a complainant or respondent is prohibited by district policy.

For more information or to file a complaint, contact the Cosumnes River College Equity Officer at equity@crc.losrios.edu or (916) 691-7740.
Sexual Harassment or Assault
| Cosumnes River College

Title IX (Sex Discrimination)

Title IX of the Educational Amendments of 1972 and subsequent amendments bans sex discrimination in schools, whether it be in academics or athletics. Title IX states: “No person in the United States shall, on the basis of sex, be excluded from participation in, be denied benefits of, or be subjected to discrimination under any education program or activity receiving federal financial assistance.”

The underlying intent of Title IX is to eliminate any form of discrimination based on gender that may interfere with a student's physical well-being, emotional well-being, and academic performance. Colleges and universities receiving federal funds bear an affirmative duty to ensure that no student (male or female) is deprived of an educational opportunity or benefit due to such discrimination.

Gender Harassment

Sex discrimination in the form of gender harassment consists primarily of repeated comments, jokes, and innuendoes directed at persons because of their gender or sexual orientation. This behavior typically is not aimed at eliciting sexual cooperation, but, like racial harassment, it contaminates the learning and work environment and has no place at Cosumnes River College.

Examples of gender harassment include the following:

- Disparaging women's intellectual abilities and potential
- Using sexist statements in classroom discussions
- Disparaging the lifestyles or behaviors of gays or lesbians

Sexual Harassment Policy

It is the desire of the Los Rios Community College District Board of Trustees to provide for all students and employees an educational environment and workplace free from sexual harassment. Sexual harassment in any situation is unacceptable and is in violation of state and federal laws and regulations. Where evidence of harassment is found, appropriate corrective action shall be taken.

Definition of Sexual Harassment

Sexual harassment means unwelcome sexual advances, requests for sexual favors, and other verbal, visual, or physical conduct of a sexual nature, made by someone from or in the work or educational setting, under any of the following conditions:

- Submission to the conduct is explicitly or implicitly made a term or a condition of an individual's employment, academic status, or progress
- Submission to, or rejection of, the conduct by the individual is used as the basis of employment or an academic decision affecting the individual
- The conduct has the purpose or effect of having a negative impact upon the individual's work or academic performance, or of creating an intimidating, hostile, or offensive work or educational environment
- Submission to, or rejection of, the conduct by the individual is used as the basis for any decision affecting the individual regarding benefits and services, honors, programs, or activities available at or through the educational institution.

Sexual harassment includes, but is not limited to:

- Making unsolicited written, verbal, visual, or physical contact with sexual overtones. Some examples are:
  - Epithets
  - Derogatory comments or slurs of a sexual nature
  - Impeding or blocking movements or any physical interference with normal work
Derogatory posters or cartoons
Continuing to express sexual interest after being informed that the interest is unwelcome (reciprocal attraction is not considered sexual harassment)

Within the work environment, engaging in explicit or implicit coercive sexual behavior which controls, influences, or affects the career, salary, and/or work environment, or any other term or condition of employment

Within the educational environment, engaging in explicit or implicit coercive sexual behavior which controls, influences, or affects the educational opportunities, grades, and/or learning environment of the student

Making reprisals, threats of reprisal, or implied threats of reprisal following a negative response to a sexual advance. For example, within the work environment, either suggesting or actually withholding support for an appointment, promotion, or change of assignment; suggesting a poor performance report will be prepared; or suggesting probation will be failed. Within the educational environment, either suggesting or actually withholding grades earned or deserved; suggesting a poor performance evaluation will be prepared; or suggesting a scholarship recommendation or college application will be denied

Offering favors of educational or employment benefits, such as grades or promotions, favorable performance evaluations, favorable assignments, favorable duties or shifts, recommendations, reclassifications, and so on, in exchange for sexual favors.

Sexual Assault

Sexual assault includes, but is not limited to:

- Rape
- Forced sodomy
- Forced oral copulation
- Rape by a foreign object
- Sexual battery
- Domestic violence
- Dating violence
- Stalking
- Threat of sexual assault

Sexual assault is a form of sexual harassment and should be reported under the district's Discrimination and Harassment Procedures Policy P-2423 and Regulation R-2423.

Sexual Violence

Sexual violence means physical sexual acts perpetrated against a person's will or where a person is incapable of giving consent due to the victim's use of drugs or alcohol. An individual also may be unable to give consent due to an intellectual or other disability. Sexual violence includes, but is not limited to, rape, sexual assault, sexual battery, and sexual coercion.

Consent

Consent is the informed, affirmative, conscious decision by each participant to engage in mutually agreed-upon sexual activity.

Consent must be voluntary, and given without coercion, force, threats, or intimidation. Consent requires positive cooperation in a particular sexual act, or expression of intent to engage in that sexual act through the exercise of free will.

Consent can be withdrawn or revoked. Consent to one form of sexual activity (or one sexual act) does not constitute consent to other forms of sexual activity (or other sexual acts). Consent to sexual activity given on one occasion does not constitute consent to sexual activity on another occasion. The fact that two people are, or were in, a dating or sexual relationship does not constitute consent to engage in sexual activity. There must always be mutual and affirmative consent to engage in sexual activity. Consent to a sexual act may be withdrawn or revoked at any time, including after penetration. The victim's request for the perpetrator to use a condom or birth control does not, in and of itself, constitute consent. Once consent is withdrawn or revoked, the sexual activity must stop immediately.

Consent cannot be given by a person who is incapacitated. For example, a person cannot give consent if she/he is unconscious or coming in and out of consciousness. A person is incapacitated if she/he lacks the physical and/or mental ability to make informed, rational judgments. Examples of incapacitation include unconsciousness, sleep, and blackouts. Whether an intoxicated person (as a result of using alcohol or other drugs) is incapacitated depends on the extent to which the alcohol or other drugs impact the person's decision-making capacity, awareness of consequences, and ability to make fully informed judgments. A person with a medical or mental disability may also lack the capacity to give consent.
Being intoxicated by drugs or alcohol does not diminish a person's responsibility to obtain consent from the other party before engaging in sexual activity. Factors to be considered include whether the person knew, or whether a reasonable person in the accused's position should have known, that the victim did not give, or revoked, consent; was incapacitated; or was otherwise incapable of giving consent.

Sexual intercourse with a minor is never consensual when the victim is under 18 years old, because the victim is considered incapable of giving legal consent due to age.

**Domestic Violence**

Domestic violence is a form of sexual violence and is abuse committed against someone who is a current or former spouse, current or former cohabitant, someone with whom the abuser has a child, someone with whom the abuser has or had a dating or engagement relationship, or a person similarly situated under California domestic or family violence law.

Cohabitant means two unrelated persons living together for a substantial period of time, resulting in some permanency of relationship. Factors that may determine whether persons are cohabiting include, but are not limited to:

1. Sexual relations between the parties while sharing the same living quarters
2. Sharing of income or expenses
3. Joint use or ownership of property
4. Whether the parties hold themselves out as husband and wife
5. The continuity of the relationship
6. The length of the relationship

**Dating Violence**

Dating violence is a form of sexual violence and is abuse committed by a person who is, or has been, in a social or dating relationship of a romantic or intimate nature with the victim. This may include someone the victim just met; for example, a person they met at a party, were introduced to through a friend, or met on a social networking website.

**Stalking**

Stalking means a repeated course of conduct directed at a specific person (when based on gender or sex) that places that person in reasonable fear for his/her or others' safety, or to suffer substantial emotional distress.

**Resources**

For issues regarding sexual harassment and assault, the following resources are available:

- Los Rios Police, (916) 558-2221
- WEAVE Confidential Advocate, (916) 568-3011 or WEAVE@losrios.edu (mailto:WEAVE@losrios.edu)
- Claire Oliveros (Title IX Coordinator), (916) 691-7487 or oliverc@crc.losrios.edu (mailto:oliverc@crc.losrios.edu)
Types of Harassment

It is a priority of Cosumnes River College to prevent and respond to all forms of harassment, including bullying, psychological harassment, racial harassment, religious harassment, stalking, mobbing, hazing, and backlash.

Bullying

Bullying is physical and psychological harassing behavior perpetrated against an individual, by one or more persons. Bullying can occur on the playground, in school, on the job, or any other place.

HB 1576 defines bullying as recklessly or intentionally endangering the health or safety of a student by exposing the student repeatedly and over time to physical aggression or intimidation, whether through direct physical contact or through the use of information or communication technology, resulting in bodily injury or other harm to person or property. This definition does not supersede or limit any definition of bullying developed by the Board of Education or the actual codes of student conduct adopted by school boards pursuant to Section 221-279.6. Bullying is punishable as a Class 1 misdemeanor.

Workplace bullying is repeated, health-harming mistreatment of one or more persons (the targets) by one or more perpetrators that takes one or more of the following forms:

- Verbal abuse
- Offensive conduct/behaviors (including nonverbal) which are threatening, humiliating, or intimidating
- Work interference (sabotage) which prevents work from getting done

Psychological Harassment

Psychological harassment is humiliating or abusive behavior that lowers a person's self-esteem or causes them torment. This can take the form of verbal comments, actions, or gestures. Workplace mobbing is considered psychological harassment.

Racial Harassment

Racial harassment is the targeting of an individual because of their race or ethnicity. The harassment includes words, deeds, and actions that are specifically designed to make the target feel degraded due to their race of origin or ethnicity.

Religious Harassment

Religious harassment is verbal, psychological, or physical harassment used against targets because they choose to practice a specific religion. Religious harassment can also include forced and involuntary conversions.

Stalking

Stalking is the unauthorized following and surveillance of an individual, to the extent that the person's privacy is unacceptably intruded upon and the victim fears for their safety.

Mobbing

Mobbing is violence committed directly or indirectly by a loosely affiliated and organized group of individuals to punish or even execute a person for an alleged offense without a lawful trial. The "offense" can range from a serious crime, like murder to simple expression of ethnic, cultural, or religious attitudes. The issue of the victim's actual guilt or innocence is often irrelevant to the mob, since the mob relies on contentions that are unverifiable, unsubstantiated, or completely fabricated.

Hazing
Hazing is persecuting, harassing, or torturing in a deliberate, calculated, planned manner. Typically the targeted individual is a subordinate, for example, a fraternity pledge, a first-year military cadet, or somebody who is considered "inferior" or an "outsider." Hazing is illegal in many instances.

Backlash

Backlash or "victim blaming" occurs when the harasser or other people in the environment blame the victim for the harassment or the resulting controversies and conflicts after the harassment is reported or discovered.

Backlash results when people erroneously believe the victim could stop the harassment if they really tried, or that the victim must have done something to cause the harassment. The victim may be accused of trying to get attention, covering for incompetence, or in cases where the harassment is proven, lying about the extent of the effects.

Outdated attitudes about certain kinds of harassment remain and there is often social pressure for victims to keep quiet about abuse or suffer the consequences.
Discrimination and Harassment Complaint Procedures
| Cosumnes River College

How to File a Complaint

To file a complaint, fill out a Discrimination Complaint Form (/lrccd/shared/doc/legal/discrimination-complaint-form.pdf) (PDF) and submit it to your equity officer. This form is not required and a complaint will not be rejected based on failure to use the form.

For more information or to file a complaint, contact the Cosumnes River College Equity Officer at equity@crc.losrios.edu (mailto:equity@crc.losrios.edu) or (916) 691-7740.

Complaint Resolution

If it is determined that misconduct occurred, then Cosumnes River College will take immediate steps to halt misconduct and remedy any effects of that misconduct.

An equity officer will hold an informal conference if the complainant wants to try and resolve the complaint informally. The equity officer will provide information about applicable laws and rules. If an informal resolution is not reached or if the complainant disagrees with the recommendation made, then the complainant may engage in a formal resolution process.
Graduation and Transfer
| Cosumnes River College

Make a Plan for Transfer Success

Students who plan to transfer to the California State University (CSU) system, the University of California (UC) system, or to a private or out-of-state college or university should make an education plan with a counselor. This will ensure you meet the requirements for the specific institution you plan to attend.

Transfer eligibility is based on transferable college units and/or high school records and test scores. Each institution has its own admission requirements. To prepare for transfer:

1. Decide where you want to transfer
2. Talk to a counselor about that school's specific requirements
3. Create an education plan

In This Section

Graduation Requirements (/2020-2021-catalog/graduation-and-transfer/graduation-requirements)
Learn about graduating from Cosumnes River College, including how to petition for a degree or certificate and annual commencement ceremonies.

Commencement (/2020-2021-catalog/graduation-and-transfer/commencement)
Cosumnes River College has one commencement ceremony in May of each year, at the end of the spring semester.

While You Are Here (/2020-2021-catalog/graduation-and-transfer/preparing-to-transfer)
Students who plan to transfer should make an education plan with a counselor to ensure they meet the requirements for the specific institution they plan to attend.

Petition for a Certificate  
| Cosumnes River College

How to Petition for a Certificate

Students can file a petition for a certificate using our online certificate petition form [https://resources.crc.losrios.edu/services/admissions/gradpetition], or they can meet with a counselor [https://crc.losrios.edu/counseling] to file a certificate petition. Cosumnes River College does not automatically confer certificates because requirements vary from program to program.

Requirements

To petition for a certificate, students must:

1. Know their catalog year*
2. Complete all certificate requirements with a minimum grade point average (GPA) of 2.0
3. Complete at least 12 units toward the certificate at Cosumnes River College (this does not apply to certificates that are less than 12 units)

* Usually, students follow the current catalog year. However, if you are following certificate requirements from an old catalog, then you must have maintained catalog rights ([/2020-2021-catalog/graduation-and-transfer/graduation-requirements/petition-for-a-certificate#catalog-rights]).

Required Documentation

The following must be on file in the Admissions and Records Office for a certificate petition to be processed:

- Official transcripts of all coursework completed at colleges outside of the Los Rios Community College District
- Official copies of AP/IB/CLEP test scores, if applicable
- A copy of DD214-military discharge papers, if veteran desires credit for military units
- List of courses in progress if attending another college
- Official final transcripts will be required at the end of the semester for final certificate evaluation
- Copy of any required competency tests, if applicable

Students must complete all certificate requirements by the end of the semester in which they petition for a certificate.

Petition Deadlines for 2020-2021

- Summer 2020: Friday, June 19, 2020
- Fall 2020: Friday, October 2, 2020
- Spring 2021: Friday, March 5, 2021

Approval or Denial

You will be notified via email if your petition is approved or denied.

If denied, then you will be notified of the missing requirements and advised to submit a new petition. If approved, then your certificate of achievement will be posted to your transcript at the end of the semester.

We mail certificates to the address listed on your petition, unless you choose to pick up your certificate. You will be notified when your certificate is available for pick-up.

Catalog Rights

For the purpose of graduating or earning a certificate from any college in the Los Rios Community College District, a student who attends at least one session (whether quarter, semester, or summer) in each calendar year at any California community college, California State University, University of California, or any regionally accredited institution of higher education, may choose to meet the requirements in effect at the Los Rios college from which the student intends to graduate, as follows:

- Requirements that were in effect at the time the student was admitted to a Los Rios college
- Requirements that were in effect at the time the student originally enrolled in an accredited college
- Requirements that were in effect at the intended date of graduation from a Los Rios college

Certificate of Achievement vs. Certificate of Proficiency

A Certificate of Achievement requires 18 or more units, while a Certificate of Proficiency requires fewer than 18 units. In addition, a Certificate of Achievement is posted to a student's transcript, while a Certificate of Proficiency is not. A Certificate of Proficiency cannot be posted to a student's transcript unless it has been approved by the California Community College Chancellor's Office, per Title 5 Regulation 55070.b.
Petition for a Degree  
| Cosumnes River College

How to Petition for a Degree

Students can file a petition for a degree using our online degree petition form [here](https://resources.crc.losrios.edu/services/admissions/gradpetition), or they can meet with a counselor [here](https://crc.losrios.edu/counseling) to file a degree petition. Cosumnes River College does not automatically confer degrees because requirements vary from program to program.

Requirements

To petition for a degree, students must:

1. Know their catalog year*
2. Complete all degree requirements with a minimum grade point average (GPA) of 2.0
3. Complete at least 12 units toward the degree at Cosumnes River College

* Usually, students follow the current catalog year. However, if a student is following certificate requirements from an old catalog, then they must have maintained catalog rights ([2020-2021 catalog/graduation-and-transfer/graduation-requirements/petition-for-a-degree#catalog-rights](https://2020-2021-catalog/graduation-and-transfer/graduation-requirements/petition-for-a-degree#catalog-rights)).

Required Documentation

The following must be on file in the Admissions and Records Office for a degree petition to be processed:

- Official transcripts of all coursework completed at colleges outside of the Los Rios Community College District
- Official copies of AP/IB/CLEP test scores, if applicable
- A copy of DD214-military discharge papers, if veteran desires credit for military units
- List of courses in progress if attending another college
- Official final transcripts will be required at the end of the semester for final degree evaluation
- Copy of any required competency tests, if applicable

Students must complete all degree requirements by the end of the semester in which they petition for a degree.

Petition Deadlines for 2020-2021

- Summer 2020: Friday, June 19, 2020
- Fall 2020: Friday, October 2, 2020
- Spring 2021: Friday, March 5, 2021

Approval or Denial

You will be notified via email if your petition is approved or denied.

If denied, then you will be notified of the missing requirements and advised to submit a new petition. If approved, then your degree will be posted to your transcript at the end of the semester.

We mail degrees to the address listed on your petition, unless you choose to pick up your degree. You will be notified when your degree is available for pick-up.

**Catalog Rights**

For the purpose of graduating or earning a certificate from any college in the Los Rios Community College District, a student who attends at least one session (whether quarter, semester, or summer) in each calendar year at any California community college, California State University, University of California, or any regionally accredited institution of higher education, may choose to meet the requirements in effect at the Los Rios college from which the student intends to graduate, as follows:

- Requirements that were in effect at the time the student was admitted to a Los Rios college
- Requirements that were in effect at the time the student originally enrolled in an accredited college
- Requirements that were in effect at the intended date of graduation from a Los Rios college
Students may graduate from Cosumnes River College with the Associate in Arts (AA) or the Associate in Science (AS) degree by fulfilling the following requirements:

1. Satisfactory completion of 60 units of collegiate work with a 'C' (2.0) grade point average (GPA) in a curriculum that the district accepts toward the degree. At least 12 of the 60 units must be earned at Cosumnes River College.

2. Major: Complete an AA or AS Major Program of Study offered at Cosumnes River College. Courses used to complete requirements for the major must be completed with a grade of 'C' or better.

3. Demonstration of competency in reading, written expression, and mathematics.

4. Completion of Cosumnes River College's general education requirements with a minimum GPA of 2.0 in courses used for general education (21 units minimum) or possession of a Baccalaureate Degree (BA/BS) or higher from a regionally accredited college or university in the US.*

5. Students are held to the graduation requirements established at the time they begin college as long as they maintain their catalog rights.

Note: Effective beginning summer 2004, students who possess a BA/BS or higher degree from a regionally accredited college or university in the United States are deemed to have met the General Education and Graduation Competency Requirements for an AA/AS degree.

* See District Policy P-7241 and Regulation R-7241.

Graduation Competency Requirements

Demonstrate college-level competence in reading, written expression, and mathematics by completing the following:

1. **Reading Competency** (one of the following) –
   - Completion of Cosumnes River College's General Education pattern
   - Completion and certification of the CSU GE Breadth pattern
   - Completion and certification of the IGETC pattern

2. **Written Expression Competency** (one of the following) –
   - Completion with a grade of 'C' or better of ENGWR 300, ENGWR 341, ENGWR 480, HONOR 375, or BUS 310
   - Completion with a grade of 'C' or better of an equivalent college writing course at a regionally accredited college in the US

3. **Mathematics Competency** (one of the following) –
   - Completion with a grade of 'C' or better in MATH 110, 120, 125, or 144; ECON 310; HONOR 393; POLS 382; or PSYC 330
   - Completion with a grade of 'C' or better of a designated higher-level mathematics/statistics course
   - Completion with a grade of 'C' or better of a college math course at a regionally accredited college
   - Obtain a satisfactory score on a mathematics competency examination used district-wide for graduation

For the purpose of graduating or earning a certificate from any college in the Los Rios Community College District, a student who attends at least one session (whether quarter, semester, or summer) in each calendar year at any California community college, California State University, University of California, or any regionally accredited institution of higher education, may choose to meet the requirements in effect at the Los Rios college from which the student intends to graduate, as follows:

- Requirements that were in effect at the time the student was admitted to a Los Rios college
- Requirements that were in effect at the time the student originally enrolled in an accredited college
- Requirements that were in effect at the intended date of graduation from a Los Rios college
Commencement
| Cosumnes River College

Cosumnes River College has one commencement ceremony in May of each year, at the end of the spring semester. Students who meet the graduation requirements during the prior summer semester (August), prior fall semester (December), or during the spring semester may participate in the graduation commencement exercise.

All students who are eligible for an associate degree must petition for graduation.
While You Are Here
| Cosumnes River College

Make a Plan for Transfer Success

Students who plan to transfer to the California State University (CSU) system, the University of California (UC) system, or to a private or out-of-state college or university should make an education plan with a counselor. This will ensure you meet the requirements for the specific institution you plan to attend.

Transfer eligibility is based on transferable college units and/or high school records and test scores. Each institution has its own admission requirements. To prepare for transfer:

1. Decide where you want to transfer
2. Talk to a counselor about that school's specific requirements
3. Create an education plan

In This Section

Learn about the course identification numbering system (C-ID) and how to identify which courses are transferable.
Transfer Requirements

Students who plan to transfer to the California State University (CSU) system must meet certain requirements. The requirements differ based on whether you:

1. Were eligible for admission to a CSU directly after high school
2. Are only now eligible for admission through community college transfer

CSU accepts a maximum of 70 transferable semester units completed at a community college.

Eligible for Transfer After High School

High school eligibility is based on test scores, grade point averages, and completion of specific subject area requirements.

If you were eligible for admission to a CSU when you graduated from high school – but you decided to attend a community college first – then you can transfer to certain CSUs at any time, as long as you maintain a 2.0 grade point average for all transferable coursework.

Eligible for Transfer Through Community College

If you were not eligible for admission to a CSU when you graduated from high school, then you may be eligible for transfer after you complete the following at a California community college:

1. A minimum of 60 transferable units with a 2.0 grade point average*
2. Either of the following general education requirements:
   a. At least 30 units of CSU general education requirements, including:
      a. Area A1, A2, and A3
      b. Area B4
   b. Intersegmental General Education Transfer Curriculum (IGETC) requirements

In addition to general education and graduation requirements, we encourage you to complete lower-division preparatory courses for your major as required by the CSU to which you want to transfer. You can find lower-division major requirements at assist.org, the official state-wide repository for transfer and course articulation information.

* GPA requirements are higher for campuses or majors that are impacted or more competitive. The minimum GPA for international or non-resident students is 2.4 instead of 2.0.

Application Dates and Deadlines

Priority application deadlines for CSU:

- For fall admission, October 1 to November 30 of the prior year
- For spring admission, August 1 to 31 of the prior year
Transfer to University of California | Cosunmes River College

Transfer Requirements

Students who plan to transfer to the University of California (UC) system must meet certain requirements. The requirements are slightly different, based on whether you:

- Were eligible for admission to a UC directly after high school
- Are only now eligible through community college transfer

Eligible for Transfer After High School

If you were eligible for admission to a particular UC when you graduated from high school, then you are eligible to transfer at any time if you maintain a 2.0 grade point average in transferable coursework.

Eligible for Transfer Through Community College

Subject Requirement

If you met the scholarship requirement after high school – but not the subject requirement – then you must do all of the following to transfer to a UC:

1. Take transferable college courses in the missing subject areas
2. Earn a C or better in each required course
3. Have a 2.0 grade point average (GPA) in all transferable coursework

Examination Requirement

If you met the scholarship requirement – but not the examination requirement – then you must complete a minimum of 12 semester units of transferable work and maintain a 2.0 grade point average in transferable coursework.

Scholarship Requirement

If you did not meet the scholarship requirement, then you must do the following:

1. Complete 60 units of UC-transferable college credit with a grade point average of at least 2.4 (for California residents) or 2.8 (for non-residents)
2. Complete the following course pattern, earning a grade of C or better in each course:
   - Two transferable courses (3 units each) in English composition
   - One transferable course (3 units) in mathematical concepts and quantitative reasoning
   - Four transferable courses (3 units each) chosen from at least two of the following subject areas: the arts and humanities, the social and behavioral sciences, or the physical and biological sciences

   1 Students who satisfy the Intersegmental General Education Transfer Curriculum prior to transferring to UC will satisfy number 2 above.

Intersegmental General Education Transfer Curriculum (IGETC)

When you complete the IGETC pattern, you partially fulfill the 60-unit requirement for transfer to UC and complete the lower division general education breadth requirements. You should request your IGETC certification from the community college you last attended when your final transcript is sent to the UC campus.
The IGETC is best if you have not yet chosen a major or a campus. Once you have selected a major, it is important to begin fulfilling any required preparatory classes for that major. This is especially true for professional or "high-unit" majors. If you are preparing for an engineering or a high-unit science major at a UC campus, then it is not advisable to use the IGETC. Instead you should concentrate on fulfilling the 60-unit admission requirement by completing lower division major preparation courses as well as the basic admission requirements listed above.

Helpful Hints

- Connect with a counselor regularly to monitor your transfer progress.
- Many courses other than the ones listed in the IGETC will transfer to UC. The units from those other courses will count toward the 60 units required to transfer as a junior. Check the catalog for the transfer status of any course.
- Though transfers do not require an associate degree, it is easy to complete one while preparing to transfer. Learn about associate degree graduation requirements (https://crc.losrios.edu/2020-2021-catalog/graduation-and-transfer/graduation-requirements/associate-degree-graduation-requirements).
- Check with your counselor about other courses needed for your major. In many cases, it is to your advantage to complete all pre-major requirements as well as general education requirements before you transfer.
Even if Cosumnes River College does not have a transfer agreement with a private or out-of-state college to which you want to transfer, you can probably receive academic credit for most of your community college classes. Most four-year institutions give full credit for general education courses and other courses designated for transfer at community college.

In addition, many out-of-state colleges participate in the Western Undergraduate Exchange (WUE) (https://www.wiche.edu/WUE/students), which offers discounts to California students in certain majors.

Find Out Transfer Requirements

Many colleges require transfer students to have completed a certain number of units, so make sure you check the requirements of the college to which you want to transfer. Transfer requirements are generally outlined in a college's catalog.
The following Cosumnes River College courses fulfill California State University (CSU) lower-division general education requirements.

A. English Language Communication and Critical Thinking

Choose one course from each area for a minimum of nine units.

<table>

Intersegmental General Education Transfer Curriculum Requirements
| Cosumnes River College

Completion of all the requirements in the Intersegmental General Education Transfer Curriculum (IGETC) meet lower-division general education requirements at either a California State University (CSU) or University of California (UC) without the need after transfer to take additional lower division general education courses. All courses must be completed with grades of "C" or better.

Students can also visit assist.org (https://assist.org) to see which courses will complete lower-division major preparation requirements. Students must see a counselor to have the IGETC pattern certified before transferring. Students who have selected a specific campus for transfer should consult with a counselor before following the IGETC pattern.

Advanced Placement (AP) and International Baccalaureate (IB) examinations are appropriate for inclusion on the IGETC pattern.

Area 1: English Communication

Transfer Degree Requirements  
| Cosumnes River College

Cosumnes River College offers associate degrees for transfer (AD-T) to the California State University (CSU) system. Transfer degrees provide a clear pathway to a CSU major and bachelor’s degree. Associate of arts for transfer (AA-T) and associate of science for transfer (AS-T) are types of transfer degrees.

Benefits of a Transfer Degree

Students who receive an AA-T or AS-T degree are guaranteed:

- Admission to a CSU with junior standing
- Priority admission consideration 1 to their local CSU campus or to a program that is similar to their community college major

1 This priority does not guarantee admission to specific majors or campuses.

Students who have been awarded an AA-T or AS-T are able to complete their remaining requirements for the 120-unit baccalaureate degree within 60 semester or 90 quarter units at a CSU campus.

Current and prospective community college students are encouraged to meet with a counselor to review their options for transfer and explore additional degrees which may be under development at this time.

Requirements for a Transfer Degree

AA-T or AS-T degrees require the following:

1. Complete 60 semester units or 90 quarter CSU-transferable units, including both of the following:
   a. One of the following GE patterns (check with your counselor to determine the appropriate pattern for the degree you are pursuing):
      - The Intersegmental General Education Transfer Curriculum (IGETC)
      - The Intersegmental General Education Transfer Curriculum (IGETC) for STEM (see counselor)
      - The CSU General Education Requirements
      - The CSU General Education Requirements for STEM (see counselor)
   b. A minimum of 18 semester or 27 quarter units in a major or area of emphasis, as determined by the college

2. Obtain a minimum grade point average of 2.0 in 60 CSU-transferable units. AD-T degrees also require that students must earn a C or better in all courses used in the major or area of emphasis. Pass grades can be used from colleges where Pass denotes a C or better.

Cosumnes River College offers the following Associate Degrees for Transfer:

- A.S. for Transfer (AS-T) Agricultural Business, AST
- Anthropology, AAT
- Art History, AAT
- Studio Arts, AAT

• Sociology, AAT
• Theatre Arts, AAT
Course Transferability and C-ID
| Cosumnes River College

Transfer Credit

Courses accepted for transfer by the University of California (UC) and/or California State University (CSU) systems are identified as such in the course details next to "Transferable." Students who have questions regarding transferability of credit for specific courses to specific institutions should consult a counselor.

Course Identification Numbering System (C-ID)

The C-ID system is a statewide numbering system designed to identify comparable courses and facilitate articulation. Any community college course that bears a C-ID number signifies that it is equivalent in content, rigor, and student learning outcomes. Any course with a C-ID number can be assured that it will be accepted at other participating community college or CSU campuses. For example: C-ID COMM 110 at Cosumnes River College will be accepted by any other college that has been approved for the same C-ID COMM 110 number.

Students should consult a counselor for specific information and help evaluating course transferability. In addition, students should visit assist.org to confirm how each college's course will be accepted for the following:

1. Majors at CSU and UC campuses
2. CSU general education requirements
3. IGETC general education requirements

Please consult a counselor to find out if your courses meet requirements at private and out-of-state colleges and universities. See an up-to-date listing of Cosumnes River College C-ID approved courses at www.c-id.net.

Course Numbering (/2020-2021-catalog/programs-of-study/description-of-courses/course-numbering)
Cosumnes River College has a standardized course numbering system.

Prerequisites, Corequisites, and Advisories (/2020-2021-catalog/programs-of-study/description-of-courses/prerequisites-corequisites-and-advisories)
Learn about prerequisite courses, corequisite courses, advisory courses, and the challenge process.

To Be Arranged Scheduling (/2020-2021-catalog/programs-of-study/description-of-courses/to-be-arranged-scheduling)
Learn about courses scheduled as TBA, or To Be Arranged.
Cosumnes River College has a standardized course numbering system. The following numbers are designed to provide students with general information regarding the focus and intent of courses.

Course Number 1 to 99
Courses numbered 1 to 99 are credit courses that are considered developmental or basic skills and are not acceptable for the associate degree or transfer credit.

Course Number 100 to 299
Courses numbered 100 to 299 are applicable to an associate degree, but not transferable to a four-year institution.

Course Number 300 to 499
Courses numbered 300 to 499 are articulated for transfer with four-year institutions and are intended to meet major, general education, or elective credit requirements.
Enrollment Conditions

Many courses and educational programs have enrollment conditions, such as prerequisites, corequisites, or advisories on recommended preparation. These faculty-approved conditions are considered necessary and appropriate to ensure that students are adequately prepared to succeed in the course or educational program. It is the student's responsibility to meet any and all enrollment conditions.

Students may challenge a prerequisite requirement through the challenge process (/2020-2021-catalog/programs-of-study/description-of-courses/prerequisites-corequisites-and-advisories#challenge).

Prerequisite

A prerequisite is a course that a student is required to take to demonstrate current readiness for enrollment in another course or educational program. For example, in order to take ENGWR 301, a student must have already completed ENGWR 300 with a grade of C or better.

Corequisite

A corequisite is a course that a student is required to take during the same semester as another course, or prior to another course. For example, a student needs to take GEOL 300 at the same time as GEOL 301 (or before taking GEOL 301).

Advisory

An advisory is a condition of enrollment when a student is advised, but not required to meet before, or in conjunction with, enrollment in a course or educational program.

Verifying Prerequisites

Students enrolled in courses that have a prerequisite must provide verification to the instructor that they have met the prerequisite. Supporting evidence includes:

- A transcript that verifies the student has earned a C or better in the prerequisite course. Students can print an unofficial transcript in eServices (https://ps.losrios.edu/student/signon.html). Instructors have access to this information on their roster if the class was taken within Los Rios Community College District since 2003 (prior course information cannot be viewed).
- English and/or math placement results from Los Rios Community College District

If a student enrolls in a course and does not meet the prerequisite, then the instructor must drop the student from the course.

Verifying Corequisites

Your current class schedule provides verification of current enrollment in a corequisite course. Alternatively, if you took the corequisite previously, then your transcript shows prior completion of the corequisite course.

Challenge Process

If you do not have the supporting evidence to verify a prerequisite or corequisite but you believe that you should qualify to enroll in the course, then you may challenge a prerequisite or corequisite.

Criteria for challenging a prerequisite or corequisite include:

- You have knowledge or ability to succeed in the course with the prerequisite.
- The prerequisite course is not readily available.
- You believe that the prerequisite is discriminatory or being applied in a discriminatory manner.
• You believe that the prerequisite was established in violation of regulations and/or the established district-approved policy and procedures.

To challenge a prerequisite or corequisite:

1. Submit a Math Prerequisite Clearance/Challenge Form (/crc/main/doc/services/placement/math-clearance-challenge-form.pdf) (PDF) or English Prerequisite Clearance/Challenge Form (/crc/main/doc/services/placement/prerequisite-challenge-form.pdf) (PDF) – along with any supporting documentation – to the instructional department (locations are listed on form) at least one week prior to the start of instruction.

2. Your challenge will be reviewed by the department's prerequisite challenge committee.

3. You will be informed in writing of the committee's determination within five working days of the review.

Exception to the Prerequisite Process – English and Math

The prerequisite for all 300-level English courses (ENGWR, ENGED, and ENGCW) and mathematics courses (MATH and STAT) must be cleared prior to enrollment.

You will be automatically cleared to enroll in an English or math class if:

• You are currently enrolled in the appropriate prerequisite course at a Los Rios college (you must earn a C or better grade or you will be automatically dropped from the higher level course before the new semester begins).

• You have completed and passed the appropriate prerequisite course at a Los Rios college.

• You have been placed into the math or English course you want to add.

If you completed the equivalent prerequisite course with a grade of C or better at a college or university that is on the Approved Math External Equivalency List (/shared/doc/admissions-records/prerequisite/math-universal-transfer-credit-list.pdf) (PDF) or Approved English External Equivalency List (/shared/doc/admissions-records/prerequisite/english-universal-transfer-credit-list.pdf) (PDF) then:

• Submit unofficial or official transcripts (unless already on file with the Admissions and Records office) along with a Math Prerequisite Clearance/Challenge Form (/crc/main/doc/services/placement/math-clearance-challenge-form.pdf) (PDF) or English Prerequisite Clearance/Challenge Form (/crc/main/doc/services/placement/prerequisite-challenge-form.pdf) (PDF) to the Admissions and Records office. Please Note: In-progress coursework cannot be used.

• If verified through a transcript, then the external course will be posted as transfer credit on your unofficial transcript, which will clear enrollment for math courses. This process may take three to five business days, so plan ahead.

If you did not find your course on the approved equivalency lists above – but you believe you have the knowledge or ability to succeed in an English or math course through other college/university coursework (or other credentials) – then you may challenge the prerequisite via the challenge process.
Some or all of the class hours for courses may be offered using the "To Be Arranged" (TBA) course scheduling option. Please refer to the class schedule listing for sections of courses for specific TBA weekly or daily class hour requirements that may apply.

### Cross-Listed Courses

**Cosumnes River College**

When a course is listed under two (or more) different departments in the catalog, the course is referred to as “cross-listed,” “cross-referenced,” or “same as.” The cross-listed course has identical content under both departments' catalog listing.

If two (or more) courses are cross-listed, then a student can only earn credit for one of those courses. Students who are not sure which cross-listed they should enroll in are encouraged to consult with a counselor.

When a cross-listed course is repeatable, the course may be taken (under either name) the total number of times stated in the catalog descriptions of the cross-listed course.

Accounting | Cosumnes River College

The accounting program provides training for entry-level employment in private industry, government accounting or for self-employment as a provider of computer-based bookkeeping and/or tax services. In addition, those individuals already employed in accounting can work toward career advancement by taking additional courses. Generally, employment in this specialization also requires proficiency in computer applications and good communication skills.

Associate Degree

A.A. in Accounting

This program provides training for entry-level employment in private industry, government accounting, or for self-employment as a provider of computer-based bookkeeping and/or tax services. In addition, those individuals already employed in accounting can work toward career advancement by taking additional courses. Generally, employment in this specialization also requires proficiency in computer applications and good communication skills.

Highlights include:
* A traditional course of study in Accounting Fundamentals, Financial Reporting, Managerial Analytical Techniques, State and Federal Income Taxation, Cost Accounting, and Auditing
* State-of-the-art software and equipment to provide computerized accounting training
* Internships, work experience with local employers for college units, job shadowing, guest speakers from the accounting industry, field trips to accounting offices
* A lab with tutorial assistance

Note to Transfer Students:
If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

Catalog Date: June 1, 2020

Total Units: 36

The Accounting Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **SYNTHESIZE GENERAL ACCOUNTING THEORY AND PRACTICE INTO FINANCIAL RECORDS** This includes the ability to: A. Demonstrate a firm understanding and working knowledge of basic accounting terminology and the process by which transactions are analyzed and transformed into financial statements. B. Compute, classify, record, and verify numerical date, both manually and with computing equipment, in order to develop and maintain financial records.

- **ANALYZE BUSINESS INFORMATION AND INFER THE RESOLUTION OF KEY ISSUES (ANALYTICAL SKILLS)** This includes the ability to: A. Demonstrate intelligent interpretation and use of financial statements in managing and analyzing business operations. B. Demonstrate the ability to identify key issues, research relevant data, and think critically, and analytically about the possible solutions for the financial problem encountered.

- **COMPOSE EFFECTIVE ACCOUNTING INFORMATION DOCUMENTS AND COMMUNICATE THEM TO APPROPRIATE USERS (COMMUNICATION SKILLS)** This includes the ability to: A. Create accurate, professional, and appropriate accounting documents and reports for the business entity served. B. Receive and process written and oral financial information and prepare the appropriate response for management, investor, clients, or other fellow professionals. C. Work effectively, individually and as a member of a group.

- **INTEGRATE TECHNOLOGY INTO THE DEVELOPMENT OF ACCOUNTING INFORMATION (TECHNOLOGY SKILLS)** This includes the ability to: A. Demonstrate effective use of all technology applicable to the accounting field. B. Demonstrate proficiency in the use of accounting software, spreadsheets, and databases applicable to accounting practice and procedures.

- **ANALYZE, SUMMARIZE AND INTERPRET FINANCIAL INFORMATION (CRITICAL THINKING SKILLS)** This includes the ability to: A. Record, summarize, analyze, and interpret financial activities to permit individuals and organizations to make informed judgments and sensible business decisions. B. Comprehend an unrelated set of financial facts; identify and anticipate problems and find acceptable solutions for the business entity served.

- **EVALUATE ACTIONS FOR INTEGRITY AND HONESTY (ETHICS)** This includes the ability to: A. Practice high ethical standards in all contacts with employers, clients, co workers, and general public. B. Demonstrate the ability to act with integrity and honesty and choose an ethical course of action.

- **SUPPORT ACTIONS THAT IMPROVE THE ABILITY TO INTERACT EFFECTIVELY IN DIVERSE ENVIRONMENTS AND WITH DIVERSE PERSONS. (DIVERSITY)** This includes the ability to demonstrate the ability to relate and interact effectively in teams consisting of individuals with differing interest, gender, backgrounds, and professions.

Career Information

Account Clerk; Accounting Technician; Accountant Trainee; Auditor; Bank Employee/Examiner; Certified Public Accountant; Cost Accountant; Insurance Employment; Revenue Agent (FTB/IRS); Tax Preparer; Bookkeeper for: Accounts Receivable, Accounts Payable, General Ledger, Full-Charge Bookkeeper Some career options may require more than two years of college study.
Certificates of Achievement

Accounting Clerk Certificate

This Certificate is designed to provide the skills necessary for clerical level positions within an Accounting environment. These positions support Accounting professionals and para-professional positions.

Catalog Date: June 1, 2020

## Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **SYNTHESIZE GENERAL ACCOUNTING THEORY AND PRACTICE INTO FINANCIAL RECORDS** This includes the ability to: A. Demonstrate a firm understanding and working knowledge of basic accounting terminology and the process by which transactions are analyzed and transformed into financial statements. B. Compute, classify, record, and verify numerical data, both manually and with computing equipment, in order to develop and maintain financial records.

- **ANALYZE BUSINESS INFORMATION AND INFERENCE THE RESOLUTION OF KEY ISSUES (ANALYTICAL SKILLS)** This includes the ability to: A. Demonstrate intelligent interpretation and use of financial statements in managing and analyzing business operations. B. Demonstrate the ability to identify key issues, research relevant data, and think critically, and analytically about the possible solutions for the financial problem encountered.

- **COMPOSE EFFECTIVE ACCOUNTING INFORMATION DOCUMENTS AND COMMUNICATE THEM TO APPROPRIATE USERS (COMMUNICATION SKILLS)** This includes the ability to: A. Create accurate, professional, and appropriate accounting documents and reports for the business entity served. B. Receive and process written and oral financial information and prepare the appropriate response for management, investor, clients, or other fellow professionals. C. Work effectively, individually and as a member of a group.

- **INTEGRATE TECHNOLOGY INTO THE DEVELOPMENT OF ACCOUNTING INFORMATION (TECHNOLOGY SKILLS)** This includes the ability to: A. Demonstrate effective use of all technology applicable to the accounting field. B. Demonstrate proficiency in the use of accounting software, spreadsheets, and databases applicable to accounting practice and procedures.
ANALYZE, SUMMARIZE AND INTERPRET FINANCIAL INFORMATION (CRITICAL THINKING SKILLS) This includes the ability to: A. Record, summarize, analyze, and interpret financial activities to permit individuals and organizations to make informed judgments and sensible business decisions. B. Comprehend an unrelated set of financial facts; identify and anticipate problems and find acceptable solutions for the business entity served.

EVALUATE ACTIONS FOR INTEGRITY AND HONESTY (ETHICS) This includes the ability to: A. Practice high ethical standards in all contacts with employers, clients, co workers, and general public. B. Demonstrate the ability to act with integrity and honesty and choose an ethical course of action.

SUPPORT ACTIONS THAT IMPROVE THE ABILITY TO INTERACT EFFECTIVELY IN DIVERSE ENVIRONMENTS AND WITH DIVERSE PERSONS. (DIVERSITY) This includes the ability to: A. Demonstrate the ability to relate and interact effectively in teams consisting of individuals with differing interest, gender, backgrounds, and professions.

Accounting, Taxation Certificate

This certificate acknowledges student achievement and proficiency in preparing and reviewing the income tax returns of individuals and business entities together with an understanding of necessary federal and state tax administration compliance requirements that are necessary in the policies of the Internal Revenue Service and the Franchise Tax Board.

Total Units: 20

¹Business 341 recommended for students intending to enter public accounting professions.

Accounting (ACCT)

ACCT 101 Fundamentals of College Accounting

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course emphasizes a practical approach to the use of accounts, journals, ledgers, and financial statements. The course is recommended for students who intend to seek employment in a small service or merchandising business and is an excellent preparation course for further study in accounting and business.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: ACCURATELY RECORD BUSINESS TRANSACTIONS COMMONLY ENCOUNTERED IN SERVICE AND MERCHANDISING BUSINESSES.
- analyze and make appropriate journal entries to record common financial transactions.
- post entries to the general ledger and prepare a trial balance.
- use specialized journals to record transactions.
- prepare a payroll register and make appropriate journal entries.
- prepare a bank reconciliation and record the entries necessary to update the accounts.
- SLO 2: ACCURATELY REPORT AND INTERPRET THE RESULTS OF BUSINESS ACTIVITY FOR A GIVEN FISCAL PERIOD.
- evaluate, prepare, and record adjusting, correcting, and closing entries.
- prepare financial statements for a service and merchandise business.
- evaluate and assess the effects of transactions on the accounting equation and net income.
ACCT 103 Intermediate Accounting - Part I

Units: 4
Hours: 72 hours LEC
Prerequisite: ACCT 301 with a grade of "C" or better
Catalog Date: June 1, 2020

This course provides a continuing study of the measurement and reporting of the results of operations and the financial condition of profit-directed business entities. Special emphasis will be given to the valuation of assets using both the Financial Accounting Standards (FASB) and International Financial Reporting Standards (IFRS) as authority. This course is not intended for transfer to a four-year college.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: DEMONSTRATE AN UNDERSTANDING OF CONCEPTS, PRINCIPLES, AND PRACTICES OF FINANCIAL ACCOUNTING.
  Research, interpret and apply generally accepted accounting principles, procedures, and practices according to Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS).
  Prepare financial statements and identify related disclosures.

- SLO #2: ANALYZE AND ACCOUNT FOR COMPLEX BUSINESS TRANSACTIONS.
  Assess and apply the objectives and principles for managing cash, receivables, and inventories.
  Compute actual and estimated liabilities and disclose contingent liabilities.
  Account for depreciation, depletion, amortization, and disposal of assets.
  Compare future and present value of cash flows.

- SLO #3: IDENTIFY THE ETHICAL IMPLICATIONS INHERENT IN FINANCIAL ACCOUNTING AND REPORTING AND BE ABLE TO APPLY STRATEGIES FOR ADDRESSING THEM.

ACCT 104 Intermediate Accounting - Part II

Units: 4
Hours: 72 hours LEC
Prerequisite: ACCT 103 with a grade of "C" or better
Catalog Date: June 1, 2020

This course is a continuing study of the measurement and reporting of the results of operations and the financial position of business entities. An emphasis is placed on accounting for investments, stockholder's equity, long-term liabilities, leases and income taxes. This course is not intended for transfer to a four-year college.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO#1: DEMONSTRATE AN UNDERSTANDING OF CONCEPTS, PRINCIPLES, AND PRACTICES OF FINANCIAL ACCOUNTING.
  Research, interpret and apply generally accepted accounting principles, procedures, and practices according to Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS).
  Prepare financial statements and identify related disclosures.

- SLO#2: ANALYZE AND ACCOUNT FOR COMPLEX BUSINESS TRANSACTIONS.
  Demonstrate an understanding of the accounting and disclosure requirements for: current, contingent and long-term liabilities; stockholders equity; dilutive securities, earnings per share; investments; revenue recognition; income taxes; pension plans and post retirement benefits; leases; and accounting errors and changes.

- SLO#3: IDENTIFY THE ETHICAL IMPLICATIONS INHERENT IN FINANCIAL ACCOUNTING AND REPORTING AND BE ABLE TO APPLY STRATEGIES FOR ADDRESSING THEM.
ACCT 107 Auditing

The course focuses on procedures and practices used in the verification of financial statement balances and accounting records. External auditing functions are emphasized. The types of audits and auditing occupations, as well as the legal liabilities of the auditor are discussed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE AN UNDERSTANDING OF PROFESSIONAL ETHICS AND AUDITOR LIABILITY.
  - assess professional standards and ethics, such as Generally Accepted Auditing Standards (GAAS), in the execution of audit procedures and in the preparation of audit reports.
  - assess the various components of audit risk.
- SLO 2: PREPARE AN AUDIT PROGRAM AND VARIOUS AUDITOR'S REPORTS
  - differentiate among financial, operational, and compliance type audits.
  - demonstrate use of the techniques for accumulation and documentation of audit evidence to substantiate amounts reported on corporate financial statements.
  - assess the circumstances causing departures from the standard audit report such as scope limitations, non-conformity with Generally Accepted Accounting Principles (GAAP), inconsistency in accounting principles, inadequate disclosure, and substantial doubt about the company's ability to continue as a "going concern''.
- SLO 3: DEMONSTRATE AN UNDERSTANDING OF THE COMPONENTS OF THE INTERNAL CONTROL.
  - demonstrate the analytical skills needed to document, assess the usefulness of, and test for the existence of internal controls normally found in large accounting systems.
  - incorporate sampling methodologies into audit procedures.

ACCT 111 Cost Accounting

This course is an introduction to cost accounting methods, including job order, process and standard cost systems. Special attention will be given to management uses of cost accounting. This course is not intended for transfer to a four-year college.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EVALUATE AND APPLY ACCOUNTING CONCEPTS MANAGERS USE FOR PLANNING, CONTROL, AND DECISION-MAKING
  - Explain the importance of having an effective cost accounting system in a business
  - Identify the major elements of manufacturing costs
  - Evaluate investment decisions, including whether to keep or replace equipment, drop or retain product lines or organizational segments, and make or buy a product
  - Describe standard costing and be able to compute and analyze resulting variances
  - Describe cost-volume-profit analysis and use it to determine break-even points and other measurements of profitability
• SLO 2: ACCOUNT FOR COSTS USED IN MANUFACTURING AND SERVICE OPERATIONS AND ANALYZE THE BEHAVIOR OF THE TYPES OF COSTS
• Differentiate between job-order, process costing and activity-based costing, and be able to determine which method would be most appropriate for a particular product or process
• Prepare journal entries for the flow of costs in a manufacturing business using several different methods of accounting for those costs
• Demonstrate how factory overhead costs are budgeted, accumulated, and applied to product cost
• Analyze capital investment alternatives using several quantitative tools
• SLO 3: DEMONSTRATE UNDERSTANDING OF ETHICAL PRACTICES OF MANAGEMENT ACCOUNTANTS

ACCT 121 Payroll Accounting

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ACCT 101
Catalog Date: June 1, 2020

This is a study of payroll and personnel records, procedures and regulations. The course will include a study of the various California and Federal laws pertaining to the computation of earnings and withholdings. Payroll tax payment requirements and preparation of the employer's California and Federal payroll tax reports will be included. A comprehensive simulation project will be completed as part of the course. The project will include one quarterly payroll reporting cycle.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO 1: DEMONSTRATE KNOWLEDGE AND UNDERSTANDING AND THE ABILITY TO APPLY THE VARIOUS FEDERAL AND STATE LAWS THAT AFFECT EMPLOYERS IN THEIR PAYROLL OPERATIONS, INCLUDING RECORD KEEPING AND REPORTING REQUIREMENTS.
• Determine how these various laws and regulations apply to a particular business.
• Outline the record keeping and reporting procedures of a typical payroll accounting system.
• Calculate the gross payroll, withholding amounts, and net pay for an employer's payroll period, using multiple wage rates and earnings calculation methods.
• Create and maintain payroll records as required by federal and state payroll taxing authorities.
• Create all required federal and state payroll tax returns including the Employer's Quarterly Federal and State Tax Returns, reports required by the Federal Unemployment Tax Act, and other federal and state payroll tax and information reports as required.
• SLO 2: DEMONSTRATE AN UNDERSTANDING OF AND BE ABLE TO APPLY PROFESSIONAL ETHICAL BEHAVIOR IN ACCOUNTING AND BUSINESS.

ACCT 125 Federal and State Individual Taxation

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Advisory: ACCT 101 and 301
Catalog Date: June 1, 2020

This course is a study of basic Federal and State Income Tax regulations with an emphasis on the skills necessary for the preparation of individual income tax returns. Included are filing requirements, determination of taxable income, allowable deductions, tax computation, tax credits, other taxes, payment methods, and audit procedures.

This course is a California Tax Education Council (CTEC) qualifying education course, and is offered to members of the community to enable them to become registered tax return preparers (CRTP) in the state of California.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

SLO1: DEMONSTRATE UNDERSTANDING OF CONSTITUTIONAL ORIGINS, STATUTORY REQUIREMENTS, AND OTHER LEGISLATIVE AND ADMINISTRATIVE UNDERPINNINGS OF THE INCOME TAX SYSTEMS OF THE UNITED STATES AND CALIFORNIA.

- Compute the federal and state tax formula for individuals: gross income, adjusted gross income, taxable income, and income tax.
- Demonstrate an understanding of what constitutes "substantial authority" with respect to a position taken on a tax return, and be able to locate substantial authority for such a position.
- Know where each item of income and deduction belongs on the federal and state income tax returns for individuals.
- Prepare intermediate-level federal and state individual income tax returns.
- Conduct basic tax research using publicly-available research tools.
- Understand the basics of income tax administration, including the audit process, reporting requirements, and taxpayer and preparer penalties, particularly California tax practitioner requirements.
- SLO2: CALCULATE STATE AND FEDERAL TAXES USING APPLICABLE LAWS AND STANDARD FORMS.
- Compute the federal and state tax formula for individuals including gross income, adjusted gross income, taxable income and income tax.
- Identify where each item of income and deduction belongs on the federal and state income tax forms for individuals.
- Identify and calculate tax credits a taxpayer is entitled to claim on their tax return.
- Prepare basic, intermediate and advanced level federal and California individual income tax returns.
- SLO3: DEMONSTRATE AN UNDERSTANDING OF AND BE ABLE TO APPLY PROFESSIONAL ETHICAL BEHAVIOR IN ACCOUNTING, TAXATION AND BUSINESS.

ACCT 128 Taxation of Corporations, Partnerships, Estates, and Trusts

**Units:** 4

**Hours:** 72 hours LEC

**Prerequisite:** ACCT 125 with a grade of "C" or better

**Catalog Date:** June 1, 2020

This course provides a continuing study of federal and state income tax compliance with an emphasis on the taxation of business entities including corporations, partnerships, limited liability companies, S corporations, estates and fiduciary trusts. Included is coverage of related party transactions, filing requirements, differences in book and taxable income, tax computation, available credits, tax elections, and working with the Internal Revenue Service on tax administration matters. This course is designed for persons seeking civil service advancement, those who are currently or will be involved with company accounting operations, and persons engaged in tax preparation. It is recommended for accounting majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: STUDENTS WILL DEMONSTRATE UNDERSTANDING OF UNITED STATES AND CALIFORNIA INCOME TAX FILING REQUIREMENTS, PROCEDURES, AND TAX ELECTIONS OF C CORPORATIONS, PARTNERSHIPS, S CORPORATIONS, LLCS, ESTATES, AND TRUSTS.
- Demonstrate understanding of various tax issues unique to corporations including capital contributions, earnings and profits, dividend distributions, net operating losses, and affiliated groups.
- Demonstrate understanding of corporate AMT, AET, PHC tax, and various tax credits, and know when these may apply to the business.
- Demonstrate understanding of various tax issues unique to partnerships and S corporations including formation concepts, income allocation to partners/shareholders, inside and outside bases, capital accounts, and loss limitations.
- Demonstrate understanding of the tax and economic differences between the various forms of business (C corporation, partnership, S corporation, and LLC), and be able to recommend a suitable form of business upon its formation.
- Demonstrate understanding to identify a simple trust, complex trust, grantor trust and estate.
- SLO 2: STUDENTS WILL CALCULATE FEDERAL AND STATE INCOME TAXES USING APPLICABLE LAWS, STANDARD FORMS AND NECESSARY WORKING PAPERS.
- Compute the taxable income of a partnership or corporation when provided with the accounting information of the entity.
Compute trust accounting income and apply the rules of the Uniform Principal and Income Act.
Compute distributable net income and taxable income for a trust and an estate.
Complete basic income tax returns for C corporations, partnerships, S corporations, trusts, and estates, including working papers sufficient for manager review.
SLO 3: IDENTIFY THE ETHICAL IMPLICATIONS INHERENT IN TAXATION AND REPORTING AND BE ABLE TO APPLY STRATEGIES FOR ADDRESSING THEM.

ACCT 153 Governmental Accounting

Units: 3
Hours: 54 hours LEC
Prerequisite: ACCT 301 with a grade of "C" or better
Catalog Date: June 1, 2020

This course covers accounting and financial reporting for governmental units and institutions with emphasis on the principles of fund accounting and the comprehensive annual financial report as prescribed by the Governmental Accounting Standards Board. Additional topics include governmental budgeting and budgetary controls.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Apply the basic principles of fund accounting and their application to governmental and not-for-profit organizations
- Identify the authoritative bodies responsible for setting financial reporting standards for not-for-profit organizations, the federal government, and for state and local governments.
- Identify the minimum requirements for general purpose external financial reporting specified by the Governmental Accounting Standards Board (GASB) Statement Number 34.
- Practice working with common types of funds (general, special revenue, proprietary, debt service, capital projects, and permanent) used by a state or local governmental accounting system.
- SLO 2: Analyze and interpret financial and budgetary information for governmental and not-for-profit organizations
- Explain how budgetary accounting contributes to achieving control over governmental revenues and expenditures.
- Assess governmental financial performance using ratios and other outcome indicators.
- Understand the accounting, regulatory, taxation, and performance issues for not-for-profit organizations.
- SLO 3: Identify the ethical implications inherent in governmental accounting and reporting and be able to apply strategies for addressing them.

ACCT 160 Volunteer Income Tax Assistance

Units: 2
Hours: 24 hours LEC; 36 hours LAB
Prerequisite: None.
Advisory: ACCT 125
Catalog Date: June 1, 2020

This hands-on course provides training and a service learning opportunity in the preparation of federal and California individual income tax returns. After successfully completing 24 hours of IRS-approved training and passing the IRS individual income tax exam, the student volunteer will provide a minimum of 36 hours of free tax assistance to community clients who meet qualifying criteria for the service as set by the IRS.

This course is intended for the volunteer who will assist individual and family taxpayers with basic tax concerns.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: LEARN AND APPLY CURRENT INDIVIDUAL FEDERAL AND CALIFORNIA TAX LAWS AND REGULATIONS.
- List the types of income that are taxable.
- Classify deductions as for or from adjusted gross income.
- Describe the rules for determining the deductibility of deductions for adjusted gross income.
- Determine whether a taxpayer should use the standard deduction or itemized deductions when calculating taxable income.
- Determine when taxpayers qualify for certain tax credits.
- Determine when the taxpayer is liable for certain other taxes.
- Follow the VITA rules and requirements.
- Interview taxpayers.
- Pass the BASIC exam required by the Internal Revenue Service to prepare basic VITA tax returns

**SLO #2: PREPARE ACCURATE FEDERAL AND STATE CURRENT YEAR INDIVIDUAL INCOME TAX RETURNS**

- Use the appropriate tax software to complete basic income tax returns for individuals.
- Prepare tax returns appropriately so they can be transmitted electronically to the Internal Revenue Service and to the California Franchise Tax Board.

**SLO #3: DEFINE AND BE ABLE TO APPLY PROFESSIONAL ETHICAL BEHAVIOR IN ACCOUNTING, TAXATION AND BUSINESS**

- Pass the Internal Revenue Service Volunteer Standards of Conduct (Ethics) test that is required for the VITA program.

---

**ACCT 161 Volunteer Income Tax Assistance II**

**Units:** 2  
**Hours:** 24 hours LEC; 36 hours LAB  
**Prerequisite:** ACCT 160 with a grade of "C" or better  
**Catalog Date:** June 1, 2020

This hands-on course provides training and a service learning opportunity in the preparation of federal and California individual income tax returns. After successfully completing 24 hours of IRS-approved training and passing the IRS individual income tax exams, the student volunteer will provide a minimum of 36 hours of free tax assistance to community clients who meet the qualifying criteria for the service as set by the IRS.

This course covers the Advanced level which is intended for the volunteer who will assist individual and family taxpayers with more complex tax concerns.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1: UNDERSTAND CURRENT INDIVIDUAL FEDERAL AND CALIFORNIA TAX RETURNS LAWS AND REGULATIONS.
- List the types of income that are taxable.
- Classify deductions as for or from adjusted gross income.
- Describe the rules for determining the deductibility of deductions for adjusted gross income.
- Determine the difference between the standard deduction and itemized deductions.
- Describe the rules for determining the deductibility of itemized deductions.
- Determine when taxpayers qualify for certain tax credits.
- Determine when the taxpayer is liable for certain other taxes.
- Follow the VITA rules and requirements.
- Interview taxpayers.
- Pass the BASIC and ADVANCED exams required by the Internal Revenue Service to prepare advanced level VITA tax returns.

- SLO #2: PREPARE ACCURATE FEDERAL AND STATE CURRENT YEAR INDIVIDUAL INCOME TAX RETURNS.
- Use the appropriate tax software to complete advanced level income tax returns for individuals.
- Prepare tax returns in a manner for them to be transmitted electronically to the Internal Revenue Service and to the California Franchise Tax Board.
SLO #3: DEMONSTRATE AN UNDERSTANDING OF AND BE ABLE TO APPLY PROFESSIONAL ETHICAL BEHAVIOR IN ACCOUNTING, TAXATION AND BUSINESS.

Pass the Internal Revenue Service Volunteer Standards of Conduct (Ethics) test that is required for the program.

ACCT 162 Volunteer Income Tax Assistance III

Units: 2
Hours: 24 hours LEC; 36 hours LAB
Prerequisite: ACCT 161 with a grade of "C" or better
Catalog Date: June 1, 2020

This hands-on course provides training and a service learning opportunity in the preparation of federal and California individual income tax returns. After successfully completing 24 hours of IRS-approved training and passing the IRS individual income tax exams, the student volunteer will provide a minimum of 36 hours of free tax assistance to community clients who meet qualifying criteria for the service as set by the IRS.

This course covers tax law that pertains to military tax situations and situations involving rental properties and moving expenses. This level prepares the student to assist taxpayers not only across the full VITA spectrum but adds the additional assistance to military personnel and those taxpayers that own a rental property.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: UNDERSTAND CURRENT FEDERAL AND CALIFORNIA TAX RETURNS LAWS AND REGULATIONS FOR INDIVIDUALS.
- List the types of income that are taxable.
- Understand the rules for rental properties.
- Describe the rules for determining the deductibility of deductions for adjusted gross income, including moving expenses.
- Understand and apply the rules for determining the deductibility of itemized deductions.
- Determine when taxpayers qualify for certain tax credits.
- Determine when the taxpayer is liable for certain other taxes.
- Follow the VITA rules and requirements.
- Interview taxpayers including those that own rental properties or who are in the military.
- Pass the BASIC, ADVANCED and MILITARY exams required by the Internal Revenue Service to prepare and review complex VITA tax returns.
- SLO #2: PREPARE ACCURATE FEDERAL AND STATE CURRENT YEAR INDIVIDUAL INCOME TAX RETURNS.
- Use the appropriate tax software to complete advanced level income tax returns for individuals.
- Review completed returns prepared by other students/volunteers.
- Transmit income tax returns electronically to the Internal Revenue Service and to the California Franchise Tax Board.
- SLO #3: DEMONSTRATE AN UNDERSTANDING OF AND BE ABLE TO APPLY PROFESSIONAL ETHICAL BEHAVIOR IN ACCOUNTING, TAXATION AND BUSINESS.
- Pass the Internal Revenue Service Volunteer Standards of Conduct (Ethics) test that is required for the program.

ACCT 295 Independent Studies in Accounting

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- **SLO #4:** Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

---

**ACCT 301 Financial Accounting**

**Units:** 4  
**Hours:** 72 hours LEC  
**Prerequisites:** None.  
**Advisory:** ACCT 101, BUS 105, MATH 120, or MATH 125  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area II(b)  
**Catalog Date:** June 1, 2020  
**C-ID:** C-ID ACCT 110

This is the study of accounting as an information system. Emphasis is given to understanding the nature and purpose of accounting and its function in business. The principles and concepts underlying transaction analysis and recording; financial statement preparation, disclosures, and analysis; and ethical issues are addressed. The course includes units on inventories, internal control, cash and cash flows, receivables, fixed and intangible assets, current and long-term liabilities, stockholders' equity, income tax, and investments.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1:** APPLY ACCOUNTING CONCEPTS AND PRINCIPLES IN MAKING DECISIONS ABOUT BUSINESS OPERATIONS.
  - Interpret financial statements of corporate entities.
  - Use generally accepted accounting principles to develop and interpret financial information.
  - Explain the importance of operating, investing and financing activities reported in the Statement of Cash Flows.
  - Analyze and evaluate the use of accounting information for decision making by potential investors and creditors.
  - Analyze financial statements and financial condition using solvency and profitability analysis based on historical and current data.
- **SLO 2:** APPLY THE CONCEPTS AND PRINCIPLES UNDERLYING ACCOUNTING PROCEDURES.
  - Explain the nature and purpose of generally accepted accounting principles (GAAP) and International Financial Reporting Principles (IFRS).
  - Interpret the assumptions, concepts, and principles underlying generally accepted financial accounting procedures.
  - Prepare financial statements following generally accepted accounting principles.
  - Analyze the effect of financial transactions on the accounting equation.
ACCT 311 Managerial Accounting

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: ANALYZE FINANCIAL STATEMENTS AND FINANCIAL CONDITION USING SOLVENCY AND PROFITABILITY ANALYSIS BASED ON HISTORICAL AND CURRENT DATA
- SLO 2: EVALUATE AND APPLY ACCOUNTING CONCEPTS MANAGERS USE FOR PLANNING, CONTROL, AND DECISION MAKING
  - Determine the profit-maximizing price; determine price based on absorption or variable cost; markup percentages; target costs; billing rates.
  - Analyze capital budgeting decisions using several quantitative tools including present value and net present value, internal rate of return, cost of capital, as well as incremental costs vs. total costs.
  - Evaluate investment decisions in order to determine whether to keep or replace equipment, drop or retain product line or organizational segment, and make or buy product.
- SLO 3: ACCOUNT FOR COSTS USED IN MANUFACTURING AND SERVICE OPERATIONS AND ANALYZE THE BEHAVIOR OF THE TYPES OF COST
  - Apply responsibility accounting; determining cost and profit centers; assigning revenues and costs to responsibility centers; evaluating managers of responsibility centers.
  - Prepare budgets for sales, production, direct materials, direct labor, overhead, inventory, selling/administrative expense, and cash.
  - Recall and use job order cost systems and process costing methods.
  - Prepare process cost journal entries; compute equivalent units of production.
  - Recognize and use Activity Based Costing and traditional costing systems; unit-level, batch-level, product-level, customer-level, and organization-sustaining costs; allocate costs to pools.
  - Allocate service department costs to other departments using the direct method and the step method.
- SLO 4: IDENTIFY THE ETHICAL IMPLICATIONS INHERENT IN MANAGERIAL ACCOUNTING AND REPORTING AND BE ABLE TO APPLY STRATEGIES FOR ADDRESSING THEM

ACCT 341 Computerized Accounting

Units: 4
Hours: 72 hours LEC
Prerequisite: ACCT 301 with a grade of "C" or better
Transferable: CSU; UC
C-ID: C-ID ACCT 120
Catalog Date: June 1, 2020

This course is the study of the use and reporting of accounting data for managerial planning, cost control, and decision making purposes. The course includes broad coverage of concepts, classifications, and behaviors of costs. Topics include cost systems, the analysis and use of cost information, cost-volume-profit analysis, contribution margin, profit planning, standard costs, relevant costs, capital budgeting, and statement analysis.
This is a course using the computer to prepare financial statements and other accounting reports used in business. This course emphasizes the areas of study: general ledger, accounts payable, accounts receivable, banking, bank reconciliations, depreciation, fixed assets, inventory, job order and payroll. This course provides practical experience using contemporary computerized accounting software. Consult the class schedule for specific software.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: ANALYZE AND ACCURATELY RECORD TRANSACTIONS FOR SERVICE AND MERCHANDISING BUSINESS.
  - Analyze transactions, prepare and record the appropriate entries into the entity's books and records.
  - Post entries to the general ledger and prepare a trial balance.
  - Summarize and record entries using specialized accounting modules.
  - Prepare payroll and record the appropriate entries.
  - Prepare bank reconciliations and record the necessary journal entries.
- SLO #2: PREPARE AND INTERPRET FINANCIAL STATEMENTS AND OTHER ACCOUNTING REPORTS.
  - Complete the steps of the accounting cycle from transaction analysis through financial statement preparation.
  - Evaluate and assess the effects of the transactions to the operating activities of a service or merchandising business.
  - Prepare and analyze financial statements and other accounting reports.
- SLO 3: DEMONSTRATE AN UNDERSTANDING OF AND BE ABLE TO APPLY PROFESSIONAL ETHICAL BEHAVIOR IN THE USE OF TECHNOLOGY IN ACCOUNTING AND BUSINESS.

ACCT 495 Independent Studies in Accounting

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome - Area 4).
  - Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
  - Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
  - Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
  - Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
  - Explain the importance of the major discipline of study in the broader picture of society.
ACCT 498 Work Experience in Accounting

Units: 1 - 4  
Hours: 60 - 300 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Accounting.  
Transferable: CSU  
General Education: AA/AS Area III(b)  
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED TO ONE'S CAREER.
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.
- SLO 2: DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.
- SLO 3: DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.
Advertising/Public Relations
| Cosumnes River College

This program is part of Cosumnes River College's offerings in Radio, Television and Film Production and is designed for students interested in careers in public relations and advertising. This program trains students in public relations and advertising theory and exposes them to production techniques for the Internet, radio, television and print media.

Dean
 (916) 691-7226
 PowellJ@crc.losrios.edu

Associate Degree

A.A. in Advertising/Public Relations

This CRC program is part of CRC's offerings in Radio, Television and Film Production and is designed for students interested in careers in public relations and advertising. This program trains students in public relations and advertising theory and exposes them to production techniques for the Internet, radio, television and print media.

Highlights include:
* Instruction and practice in desktop publishing and graphics applications in the department's Apple digital media laboratory or PC computer lab
* Opportunities for practical experience selling and designing ads for campus publications
* Introductory production experience in radio and television advertising, writing and production
* Internship opportunities working in local media including Advertising Agencies, Public Relations firms, TV and Radio stations, post-production houses, corporate and government employers.

Note to Transfer Students:
If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

The Advertising/Public Relations Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- write in clear, concise English. (SLO-1)
- research critically, filter the results and present them in a cogent manner. (SLO-2)
- analyze, interpret, and exercise critical judgment in the evaluation of media productions. (SLO-3)
- demonstrate through projects that with the power of a communicator, comes moral and ethical responsibility. (SLO-4)
- produce creative, persuasive messages for a specific target audience. (SLO-5)
- define the role of advertising and marketing communications in achieving organizational objectives, including traditional business practices. (SLO-6)
- plan a complete marketing communication program including situation analysis, research, objective-setting, target audience definition, creative development, media planning, budgeting, and program outcome evaluation. (SLO-7)
- describe and discuss both traditional and non-traditional media and their uses. (SLO-8)
- employ production skills in those areas important to functioning successfully as an entry-level professional. (SLO-9)

**Career Information**

Career Options: Public Information Officer; Community Relations Specialist; Media Consultant; Public Relations Firm Representative, Media Sales, Copy Writer

Some career options may require more than two years of college study.
Agriculture | Cosumnes River College

Agriculture is a vital component of our local, state, and national economies and offers many exciting employment opportunities. In addition to the production of a wide range of valuable agricultural commodities, the Sacramento region is home to numerous multinational agricultural corporations and statewide governmental agencies. It is also a center for international agricultural trade and commerce.

**Associate Degree**

A.S. in General Agriculture

Agriculture is a vital component of our local, state, and national economies and offers many exciting employment opportunities. In addition to the production of a wide range of valuable agricultural commodities, the Sacramento region is home to numerous multinational agricultural corporations and statewide governmental agencies. It is also a center for international agricultural trade and commerce. This program is designed for students majoring in Agriculture while also allowing the student to select courses that fit his/her individual needs and desires.

As a General Agriculture major, you will:

* Study a general agriculture curriculum representing all of the departments of the Cosumnes River College agriculture program including: agriculture business, horticulture, welding, veterinary technology and plant science.

* Develop your leadership and communication skills.

* Identify the agricultural career you are most interested in and build a course of study to better qualify you for a profession.

**HIGHLIGHTS**

* As the only community college agriculture program in the Sacramento region, the CRC General Agriculture program provides an excellent opportunity for individuals who wish to pursue a career in agriculture and receive a General Agriculture Associate of Science degree.

* The faculty in this program works closely with the five California agricultural degree offering universities to provide a quality program for students interested in agriculture business, management and economics.

* The Sacramento region is fortunate to have some of the best high school agriculture programs in California. The faculty in the CRC Ag program works closely with these feeder schools to articulate coursework and facilitate the successful transition of agriculture students from high school to the university.

* Internships in agriculture are available for students interested in work experience opportunities.

**NOTE TO TRANSFER STUDENTS:** If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

The General Agriculture Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Upon completion of this program, the student will be able to:

- PSLO 1: Demonstrate knowledge and hands-on experience in the basic concepts of all aspects of agriculture.
- PSLO 2: Demonstrate the ability to logically breakdown aspects of a project/problem and be able to resolve an issue in the agriculture industry.
- PSLO 3: Demonstrate independent & group learning expressing effective communication skills, both orally & written.
- PSLO 4: Participate in leadership opportunities to develop life-long learning traits.

Career Information

Management; Supervision; Finance; Insurance; Government; Marketing; Distribution; International Trade; Sales and Service Nursing Management and Operations; Park Maintenance; Landscape Design, Teaching, Communication; Contracting & Maintenance; Fertilizer & Insecticide Application; Research; Retail/Wholesale; Estimator; Consultant; Government Agency employee; Welding Technician; Inspection; Welding Engineering; Sculpting; Home/Handicraft & Hobby; Construction; Trucking & Automotive. Some positions, however, require a four-year degree for which CRC’s program is a good base for transfer.

Certificates of Achievement

General Agriculture Certificate

This program is designed to prepare students for entry level employment in Agriculture.

The Plant-Based Nutrition and Sustainable Agriculture Certificate Program brings farm-to-fork into the classroom. It provides the science that supports the benefits of whole plant-based foods to the health of the individual as well as the environment. Students will gain knowledge in the function of plant-based foods towards the treatment and prevention of chronic diseases. The program addresses the environmental and social concerns with strategies and principles of sustainable agriculture. Students will master the theories and skills of plant-based food preparation bringing the food to the fork and into everyday food choices.

Contact the CRC Nutrition and Foods, Horticulture, and/or Ag Counselor regarding transferable courses.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **PSLO 1:** Demonstrate independent learning and effective communication skills.
- Demonstrate responsibility for personal action and choices.
- Communicate effectively both orally and in writing.
- **PSLO 2:** Explain the principles of nutrition and its effect on health.
- Relate the dietary causes of chronic diseases.
- Evaluate the role of plant-based foods on health and the environment.
- **PSLO 3:** Demonstrate a fundamental understanding of health behaviors on nutritional and health status.
- Schematize the effects of personal food choice on health, the environment and public policy.
- **PSLO 4:** Basic and advanced plant science/horticulture skills development and improvement.
- Demonstrate and apply the theories of sustainable and organic agriculture.
- Demonstrate a fundamental understanding of soils, soil development, soil building and preparation and sustainable soil management.
- Demonstrate a fundamental understanding of hydraulics and irrigation design, installation, and water management principles and practices.
- Create agriculture design concepts based on sound, sustainable soil management, water conservation, construction and maintenance, and integrated pest management best practices.
- **PSLO 5:** Effectively and accurately prepare and analyze raw ingredients and prepared foods.
- Evaluate food through sensory evaluation of texture, taste, color, presentation, smell and umami.
- Identify optimal cooking procedures/heat transfer to maximize nutrient content as well as the quality of the ingredients and dish as a whole.
- Analyze quality defects in cooked products and specify possible errors in techniques or ingredient selection.
- **PSLO 6:** Implement proper sanitary and safety techniques.
- Demonstrate appropriate food handling and sanitary techniques.
- Utilize kitchen tools/equipment appropriately.
Career Information

In restaurants, food service facilities, farms, urban farms, sustainable/organic farms, school garden, health education. Some of these career options may require more than the certificate and two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.
Agriculture is a vital component of our local, state, and national economies and offers many exciting employment opportunities. In addition to the production of a wide range of valuable agricultural commodities, the Sacramento region is home to numerous multinational agricultural corporations and statewide governmental agencies. It is also a center for international agricultural trade and commerce.

The Associate in Science in A.S. for Transfer (AS-T) Agricultural Business for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Demonstrate the ability to think critically and analyze problems and recommend a solution.
- Analyze, classify, examine, record, and interpret financial information to solve economic and accounting concerns.
- Examine and apply the concepts and principles underlying economic issues.
- Apply effective listening skills to comprehend spoken messages, analyze information critically and consider multiple perspectives.
- Explain the principles of management and how managers differentiate their leadership styles.
- Differentiate the various functions of marketing.
- Design a model plan to allocate resources for an agribusiness organization.

Career Information

Agriculture Business Management; Supervision; Finance; Insurance; Government; Marketing; Distribution; International Trade; Sales and Service. NOTE TO TRANSFER STUDENTS: The Associate Degree for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as “double-counting”). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions, because many universities require more lower division courses than those in this degree. Even the CSUs that accept this transfer degree may likely require more lower division courses to achieve the Bachelor degree. Specifically, courses in general chemistry, differential equations, linear algebra, and computer programming may better prepare the transfer student for certain universities. It is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

Associate Degrees

A.S. in Agriculture Business

The program is designed to prepare students for transfer to a four-year college/university in agriculture business or immediate employment in an entry-level agriculture business related career.

HIGHLIGHTS

* As the only community college agriculture program in the Sacramento region, the CRC Agriculture Business program provides an excellent opportunity for individuals who wish to pursue a career in agriculture, receive an Agriculture Business Associate in Science degree, or transfer to CSU or UC.

* The faculty in this program works closely with the five California agricultural degree offering universities to provide a quality transfer program for students interested in agriculture business, management and economics.

* The Sacramento region is fortunate to have some of the best high school agriculture programs in California. The faculty in the CRC Ag Business program works closely with these feeder schools to articulate coursework and facilitate the successful transition of agriculture students from high school to the university.

* Internships in Ag Business are available for students interested in work experience opportunities.

This course provides a survey to the business and economics of the agriculture industry; and, an introduction to the economic aspects of agriculture including the agricultural producer, consumer and food system. The management principles encountered in the day-to-day operation of an agricultural enterprise are stressed as they relate to the decision making process.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Analyze and account for complex issues in agricultural business
- examine how economic principles relate to commodity marketing sub sectors in agriculture
- analyze agriculture business organizations, and the principles and functions involved in their organization and operation
- SLO #2 Examine and demonstrate appropriate responses to key diversity issues in the workplace.
- examine people behavior in organization
- examine and assess nature of leadership and the role of the manager as a leader
- solve problems in the areas of personnel, ethics and planning
- SLO #3 Demonstrate an understanding of concepts, principles, and practices of management, planning and allocation of resources
- examine the four functions of management and how to relate to the agribusiness organization
- design a model plan to allocate resources for an agribusiness organization using a variety of computer software programs
- identify the basic laws, regulations, and agencies that interact with the agriculture community

This course introduces computer use in the workplace with emphasis on agribusiness situations. Computer applications including word processing, spreadsheets, databases, and presentation managers will be covered. Also included will be accessing information through the Internet and World Wide Web, telecommunications, an introduction to web page design and other software appropriate to agribusiness.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Create professional looking business documents and presentation materials.
- Operate proficiently in software used in agriculture including word processors, presentation managers, web browsers, and other specific agricultural software programs.
- SLO #2: Create a professional looking spreadsheet that includes accurate formulas, functions, and formatting.
- Design and apply proficient spreadsheet applications for agriculture.
- SLO #3: Develop and analyze database functions and use analytical tools to summarize data.
- Operate computer programs such as databases.
- Utilize telecommunications to access agricultural networks and other networks useful to agricultural applications
- SLO #4: Employ computer usage with a fundamental in agriculture.
- Evaluate computer applications as a management tool for agricultural businesses and recommend courses of action to address specific needs or problem areas.
- SLO #5: Demonstrate critical thinking and analyze problems.
- Identify and solve problems using computers to complete specific agricultural projects.
- Evaluate and select computer hardware and software appropriate to agricultural business applications.

AGB 320 Agriculture Accounting

This course introduces the principles of agriculture accounting systems and types of records, their use and how to compute and use measures of earnings and cost of production to improve agribusiness efficiency. Also included are farm income tax, Social Security, and employee payroll records.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Apply accounting concepts and principles in making decisions about agricultural business operations.
- SLO #2: Apply the concepts and principles underlying accounting procedures.
- SLO #3: Analyze, classify, record, and interpret financial information.
- SLO #4: Employ computer usage with a fundamental in agriculture.
- SLO #5: Demonstrate critical thinking and analyze problems.
AGB 321 Agriculture Economics

This course introduces the analysis of economic principles of resource allocation, production, cost analysis, and market price equilibrium with primary application to the agricultural sector; supply and demand in commodity pricing under perfect and imperfect competition; and agricultural credit, marketing and policy issues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Apply various economical principles in agriculture.
  - compare and contrast the role of agriculture in the economic structure of the country and the world
  - contrast and criticize the different economic systems
  - describe the monetary system in this country
- SLO #2: Demonstrate the ability to think critically critical thinking and analyze problems
  - interpret factors of production
  - define economic terms
  - analyze market conditions and predict price
- SLO #3: Apply the concepts and principles underlying economic issues.
  - differentiate legislation affecting the farm system
  - explain the country's fiscal policy
  - solve supply and demand schedules
  - construct graphs to utilize given data on cost factors

AGB 330 Agriculture Sales and Communication

This course involves the study of principles and practices of the selling process: selling strategies and approaches, why and how people buy, prospecting, territory management, and customer service. Self-management, communication, and interpersonal skills necessary in developing managerial abilities, leadership qualities, and facilitating teamwork within the agribusiness sector will be explored. Students will gain experience through role-play, formal sales presentations, and job shadowing. The course content is organized to give students an in-depth understanding of the factors and influences that affect the agribusiness industry on a day-to-day basis. Communication, leadership, and management skills are basic tools necessary for future career development within the agribusiness sector, as well as other aspects of life.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Explain and interpret the history of agriculture sales industry.
  - discuss the history and development of the agribusiness sales industry including its scope, variety, historical perspective, relationship to other industries, and current and future role U.S economy
- SLO #2: Design and relate effective sales messages.
- analyze and apply the component parts and dynamics of the sales process
- recognize and understand the characteristics needed to be a successful agribusiness salesperson
- SLO #3: Develop a sales philosophy and relationship strategy that connects with customers
- identify the major sources for agricultural sales prospects and the methods used to secure sales commitments from potential buyers
- explain the benefits of providing post-sales customer service
- SLO #4: Apply effective listening skills to comprehend spoken messages, analyze information critically and consider multiple perspectives
- demonstrate interpersonal and organizational communication skills, with particular emphasis on the uniqueness of the agribusiness sector. Become familiar with the principles of good listening, overcoming barriers in communication, and effective verbal and non-verbal communication
- SLO #5: Demonstrate a fundamental understanding of public speaking
- explore and demonstrate characteristics of a good public speaker through role-play situations, utilization computer presentation software, and delivering formal sales presentations
- SLO #6: Explain the principles of management and how managers adopt leadership styles.
- understand the nature of management.
- discuss the importance of teamwork in organizations. Understanding teams, becoming a team, team leadership, and team performance
- define leadership and the characteristics of successful leadership. Explain current theories of leadership and influences on choice of leadership
- SLO #7: Demonstrate individual responsibility and influence to ethically, effectively and appropriately communicate with diverse settings and people
- Recognize and apply social responsibility and ethics, in terms of factors affecting ethical choices, criteria for ethical decision-making, and managing company ethics

AGB 331 Agriculture Marketing

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course is a survey of marketing aspects of the agriculture industry. Students will acquire an overview of the structure and institutional aspects of the marketing system including global agricultural markets. Student projects will include industry studies of the marketing of selected locally grown commodities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO # 1 Define the function of marketing, where and how they are performed and implement them into a scenario that is provided by the instructor.
- SLO # 2 Identify general problems in the marketing system and develop a solution for a locally grown commodity.
- Identify and explain the problems of marketing specific commodities in local area.
- Diagram how to use marketing channels in our area.
- Analyze and evaluate current trends in marketing.
- SLO #3 Evaluate the role of government in agricultural marketing and summarize their effectiveness.
- Explain the role of marketing cooperatives.
- Analyze risk and develop plans for reducing risk in an agricultural company.
- Compare and contrast the marketing alternatives available to individual firms.
- Collect and analyze marketing information.
**AGB 495 Independent Studies in Agriculture Business**

**Units:** 1 - 3  
**Hours:** 54 - 162 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- **SLO #2:** Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- **SLO #3:** Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- **SLO #4:** Use information resources to gather discipline-specific information.

**AGB 498 Work Experience in Agriculture Business**

**Units:** 1 - 4  
**Hours:** 60 - 300 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Agriculture Business.  
**Transferable:** CSU  
**General Education:** AA/AS Area III(b)  
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student’s progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER (SLO 1)
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.

- DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER (SLO 2)
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.

- DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)
Allied Health | Cosumnes River College

This program offers core courses designed for students enrolled in the Health Information Technology, Medical Assisting, Pharmacy Technician, and other Allied Health programs.

Dean
Nancy Reitz

(916) 691-7390
reitzn@crc.losrios.edu

Associate Degree

A.S. in Pre-Health Occupations

This degree prepares students interested in a variety of Allied Health occupations. The degree will prepare students with a rigorous course of study prior to selecting the program of their chosen career. Students will complete coursework with an emphasis on basic science, healthcare delivery and culturally competent patient care. Students completing the degree will be prepared to enter programs for careers in Diagnostic Medical Sonography, Medical Assisting, Health Information Technology, Nursing and others. Students may also choose to complete this degree in preparation for transfer to a Health Sciences Baccalaureate degree program. Completion of the degree does not guarantee enrollment in any health occupation program.

Catalog Date: June 1, 2020

The Pre-Health Occupations Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- ARTICULATE CAREER OPTIONS AND NECESSARY EDUCATIONAL PATHWAYS (PSLO #1)
- DESCRIBE THE STRUCTURE AND FUNCTION OF EACH BODY SYSTEM (PSLO #2)
- DEMONSTRATE A WORKABLE KNOWLEDGE OF MEDICAL LANGUAGE (PSLO #3)
- DEMONSTRATE PROFESSIONALISM IN A RANGE OF CLINICAL INTERACTIONS AND SETTINGS (PSLO #4)
- DESCRIBE THE PRINCIPLES OF NUTRITION AND THEIR EFFECT ON HEALTH (PSLO #5)
- DESCRIBE THE ROLE THAT CULTURE AND DIVERSITY PLAY IN PATIENT CARE (PSLO #6)

Allied Health (AH)

AH 108 Introduction to Health Occupations

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | None. |
| Catalog Date: | June 1, 2020 |

This course provides an introduction to the health care field and to the core foundational skills needed by all health care workers. Topics include types of health care delivery systems and careers, history and trends of health care, law and ethics pertaining to health care, personal qualities of health care workers, confidentiality and reportable incidents, and infection control and safety procedures for health care settings. Students will be introduced to research tools in the campus library and on the Internet. Students will use these tools to research health care careers and relate them to their own interests, values, and abilities. This course is open to all students wishing to explore the health care industry. A field trip to a local health care facility may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- ASSESS THE IMPORTANCE OF THE HISTORY OF MEDICINE AND EVOLUTION OF THE HEALTH CARE DELIVERY SYSTEM (SLO #1)
- Differentiate between the various health care agencies and facilities, their delivery systems, organizational structure, and major services provided.
- COMPARE AND CONTRAST THE ROLES, RESPONSIBILITIES, AND EDUCATIONAL REQUIREMENTS OF DIFFERENT HEALTH CARE CAREERS (SLO #2)
- Evaluate their own interests and abilities and utilize various research resources to match these to potential health care careers.
- Demonstrate usage of reference materials in public and medical libraries (hard copy and Internet) to research health occupations.
- IDENTIFY AND APPLY LEGAL, ETHICAL AND INFECTION CONTROL PRINCIPLES TO COMMON SITUATIONS ENCOUNTERED IN THE HEALTH CARE SETTING (SLO #3)
- Identify and recognize the breadth and limitations within an occupational scope of practice.
- Understand the basic principles and procedures for controlling the spread of infections and promoting safety in the health care setting.
EXAMINE THE PERSONAL AND PROFESSIONAL CHARACTERISTICS, ATTITUDES, AND APPEARANCE OF HEALTHCARE WORKERS (SLO #4)

- Recognize the importance of cultural sensitivity and humility required of health care providers.
- Accurately spell and pronounce common medical terms and abbreviations used in health occupations.
- Adhere to professional appearance and behavioral standards expected of a health care worker.

AH 110 Medical Language for Health-Care Providers

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Catalog Date: | June 1, 2020 |

This course is an orientation to medical language: basic structure of medical terms and their components: prefixes, suffixes, roots, and combining forms with emphasis on analysis, meaning, spelling, and pronunciation. The course builds a medical vocabulary applicable to the specialties of medicine, the systems of the body, names of major diseases, and terms used in physical examination, diagnosis, and treatment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- POSSESS A BASIC WORKABLE KNOWLEDGE OF MEDICAL VOCABULARY – SLO #1
- Utilize medical terms correctly as they apply to the systems of the body, anatomy, physiology, disease, diagnosis, and treatment
- Revise health care reports into clear, non-medical terms
- Define medical abbreviations and translate into non-medical language.
- ANALYZE THE STRUCTURAL DESIGN OF MEDICAL TERMS - SLO #2
- Compose medical words with correct spelling and pronunciation
- Identify component parts of a medical word including prefixes, suffixes and combining forms.

AH 120 Human Disease

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Corequisite: | AH 110 and BIOL 102 (Corequisites may be taken previously. BIOL 100 or 430/431 are also acceptable) |
| Catalog Date: | June 1, 2020 |

This course is a study of pathological processes imparting basic knowledge to paramedical personnel. The student will study the basic concepts, terminology, etiology and characteristics of pathological processes. Diseases are classified according to both causative agent and the body system to which they relate.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EVALUATE THE BASIC CONCEPT AND CHARACTERISTICS OF THE DISEASE PROCESS IN THE HUMAN BODY – SLO #1
- Assess how the systems of the body work together to maintain health
- Examine the effects of disease on all related systems
- DISCUSS THE COMMON DISEASES OF EACH BODY SYSTEM - SLO #2
- Relate patient signs and/or symptoms to the potential disease process occurring within the body.
- Determine the possible etiology of a disease given the clinical manifestations
- Discuss diagnostic tools and potential treatment options for a given disease based on a patient’s clinical history.
AH 124 Pharmacology for the Health Care Professional

This course introduces pharmacology, the knowledge of basic pharmacological terminology and concepts, administration, common generic and trade name medications, with an emphasis on the clinical application of pharmacology of the treatment of disease.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- ANALYZE AND DEFINE PHARMACOLOGICAL TERMS – SLO #1
  - Demonstrate the correct spelling and pronunciation of commonly prescribed generic and proprietary drugs for each medical specialty
  - Select the correct definition of various drug abbreviations
  - Determine the correct definition of common terms used in pharmacology including routes of drug administration, drug interactions, adverse effects and reactions
- ASSESS COMMON MEDICATIONS AND THE CLASSIFICATION OF DRUGS USED TO TREAT MAJOR BODY SYSTEMS AND DISEASES – SLO #2
  - Given the generic name of a commonly prescribed drug, select its proprietary name, drug category, and the disease it is used to treat
  - Analyze healthcare records and correlate symptoms, diagnoses, and tests performed with drugs administered
  - Master the use of a drug guide to locate and understand the effects and usage of pharmacological agents and the drug names including chemical name, brand name, and generic name
  - Evaluate the process of approval of drugs for use in the United States
  - Examine the principles of drug dosage and the interpretation of prescriptive terms

AH 295 Independent Studies in Allied Health

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
  - Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
  - Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
  - Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
  - Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1: DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED TO ONE'S CAREER.**
  - Understand the effects of time, stress, and organizational management on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevance to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.

- **SLO 2: DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.**
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.

- **SLO 3: DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.**
Animal Science
| Cosumnes River College

This program offers courses designed for students in the Agriculture Business, Veterinary Technology, and Equine Science programs.

Dean

Total Units: 31 - 34

The Equine Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- Describe the processes involved and outline major events in the evolution and domestication of the horse.
- Formulate a disease and parasite prevention program for equine.
- Describe career opportunities and requirements for successful employment in the equine industry.
- Relate basic genetic principles to techniques in breeding selection and mating programs.
- Identify anatomy and describe physiology of the male and female equine reproductive tract.
- List and explain the correct use of specialized insemination tools.
- Develop and maintain bookkeeping and record systems.
- Develop a ranch plan for an equine facility, incorporating legal requirements and regulations.
- Identify parts of the equine gastrointestinal system and describe the function of each.
- Implement a sound feeding program based on the type and amount of work performed.
- Assess the function and importance of each nutrient as it pertains to equine nutrition.
- Demonstrate basic handling of the horse including catching, haltering, leading and tying.

Career Information

Many Equine Science graduates aim for a future in horse farm management at breeding facilities, lesson barns, and race and show training stables. Students may also qualify for employment as technologists, consultants, show and race facility managers and staff, high school and community or junior college riding and equine science instructors, government agents, journalists, and sales or service representatives for companies promoting horse feed, health, and care products. Other career opportunities are available through breed associations, humane organizations, agriculture extension services, recreational services, horse publications, and more. Many of these options require more than two years of college study. Classes beyond the associate degree may be required for career options or to fully prepare students for transfer to a university program.

Animal Science (ANSC)

ANSC 300 Introduction to Animal Science

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area IV |
| C-ID: | C-ID AG - AS 104 |
| Catalog Date: | June 1, 2020 |

This course provides a survey of the livestock industry, including the supply of animal products and their uses. A special emphasis is placed on the origin, characteristics, adaptation and contributions of farm animals to the agriculture industry. Students analyze the economic trends and career opportunities in animal agriculture.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Explain the importance of animal production financially, socially and environmentally.
- identify economically significant beef cattle, sheep, and swine breeds and areas of production
- evaluate animal contributions to human need
- SLO #2: Explain the basic physiology of each body systems and relate that knowledge to the overall function of the animal body.
- appraise livestock body conformation and how it relates to function
- examine life cycles and biotechnological principles of animal production
- identify basic nutritional needs and feeding practices of scientific livestock production
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Describe the processes involved and outline major events in the evolution and domestication of the horse.
- Identify and describe the instinctive behaviors of the horse.
- Evaluate cultural contributions to and ethnic influences on the horse industry.
- SLO #2 Identify a minimum of eight common breeds of horses and describe their differences.
- Formulate sound management practices pertaining to equine reproduction.
- Describe unique adaptations of the equine's digestive system and implement a sound feeding program.
- SLO #3 Formulate a disease and parasite prevention program for equines.
- Design an equine handling facility, incorporating the basic housing requirements.
- Handle horses properly, applying ground safety practices.
- Successfully manage horses on a limited scale.
- SLO #4 Describe career opportunities and requirements for successful employment in the equine industry.

ANSC 301 Introduction to Equine Science

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area IV |
| Catalog Date: | June 1, 2020 |

A survey of the equine industry including equine evolution, selection, nutrition and feeding, breeding, facilities, handling and health management. Emphasis on sound management practices. This course may include field trips and the instructor may or may not provide transportation.

ANSC 302 Equine Reproduction

| Units: | 2 |
| Hours: | 32 hours LEC; 12 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course combines the study of basic genetic principles with the study of the anatomical and physiological aspects of reproduction as they relate to equine reproduction, emphasizing genetic principles and reproductive aspects. Artificial insemination, embryo manipulation, and current innovations in productive biotechnology will also be examined. This course may include field trips and off-site laboratories and the instructor may or may not provide transportation.
Upon completion of this course, the student will be able to:

- SLO #1 Relate basic genetic principles to techniques in breeding selection and mating programs.
- Evaluate advantages and disadvantages of common mating systems.
- Compile the possible genetic and phenotypic ratios for two traits.
- SLO #2 Analyze the impact of natural versus artificial insemination.
- SLO #3 Identify anatomy and describe physiology of the male and female equine reproductive tract.
- Describe the origin and functions of the major hormones, both male and female, and explain the role of each in reproduction.
- Describe the correct fetal position, delivery process, approximate timeline and maternal behaviors for a normal parturition.
- Distinguish the signs of gestation and the stages of parturition.
- SLO #4 Analyze the advantages and disadvantages of artificial insemination.
- Determine motility concentration and volume of semen in a given specimen.
- SLO #5 Critique various methods of semen storage.
- List and explain the correct use of specialized insemination tools.
- Summarize latest developments in reproductive technology.
- Examine and interpret latest regulations by breed associations regarding registration of foals.

**ANSC 303 Equine Business Management**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

Fundamentals of equine business operations, including taxes, liability, insurance, software, and facility design. The class will emphasize the skills necessary to manage a ranch, barn, stable, boarding, breeding, or training facility. This course may include field trips and the instructor may or may not provide transportation.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1 Manage legal and tax aspects of an equine business establishment.
- SLO #2 Describe and implement practices and behaviors consistent with professionalism in the workplace.
- SLO #3 Differentiate between appropriate and inappropriate job behavior and conversation.
- Assess liability issues at the workplace and determine appropriate insurance coverage.
- Summarize contracts and write invoices.
- Develop and maintain bookkeeping and record systems.
- SLO #4 Develop a ranch plan for an equine facility, incorporating legal requirements and regulations.
- Evaluate a variety of office machines and software used in the equine industry.

**ANSC 304 Livestock Feeding and Nutrition**
The fundamentals of digestion and absorption in both ruminants and non-ruminants are discussed. The nutritive value of feeds as they relate to the formulation of livestock rations will be emphasized including by-product feeding. Includes proper selection, evaluation, and utilization of feeds. This course may include field trips and off-site laboratories and the instructor may or may not provide transportation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Identify the role of livestock feeding and its part in human nutrition.
- SLO #2 Identify career requirements and potential opportunities leading to successful employment.
- Identify cultural inputs that have shaped the livestock nutrition industry.
- SLO #3 Apply changing nutritional requirements based upon animal physiological development.
- Comprehend differences in digestive anatomy that contrast feeding practices.
- Demonstrate and comprehend animal behavior as it relates to feeding practices.
- SLO #4 Explain in a verbal and written format the role of nutrition an animal health and ultimately food safety.
- Collect and calculate data used in ration formulation.
- Formulate rations with economic feasibility.
- Define and recall biological and inorganic factors that impact feeding and nutrition industry.
- SLO #5 Evaluate economic factors and trends in feeding.
- Identify various primary and by-product feeds, forms and processing techniques.
- Analyze and comprehend various procurement strategies for feed stuff purchases.

ANSC 305 Equine Health

This course introduces the major organ systems of the horse. Emphasis is on preventive maintenance and necessary managerial practices needed to keep the equine athlete, broodmare or family horse in good health.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Describe the general anatomy of the equine.
- SLO #2 Identify and describe common dental problems and abnormalities.
- Age an equine by dental eruption and dentition.
- SLO #3 Identify, describe, and recognize infectious and non-infectious diseases, their clinical signs, treatment options and prognosis.
- Identify and describe common environmental factors that may cause health problems.
- Identify and describe common internal and external parasites and describe the symptoms they produce.
- Develop effective worming and vaccination schedules.
- Identify and describe the factors that can cause colic and describe the prognosis associated with each factor.
- Identify and describe the various types of wounds, and describe how to effectively manage each type.
- SLO #4-Describe the pathogenesis of Navicular Disease and the related foot problems that are differentials and identify and describe common methods of treatment.
- Identify and describe major types of fore and hind limb lameness and indicate how they relate to usability.
- Identify and describe the major factors responsible for laminitis and outline methods for its prevention and treatment.
- SLO #5 Identify and describe the normal reproductive patterns of the mare and the stallion.
- Identify and describe normal foaling behavior and presentation, and outline procedures for the proper care of the neonate.

**ANSC 306 Basic Equine Handling**

| Units: | 1 |
| Hours: | 54 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU; UC |
| Catalog Date: | June 1, 2020 |

This course offers an introduction to the fundamentals of horse handling, with an emphasis on safety. Course covers identification of equine behavioral patterns, handling skills such as catching, haltering, tying, lunging and round-pen training, and recognizing how human/horse interactions affect equine behavior.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1-Identify and explain basic equine behavior as it relates to riding situations.
- Identify and explain the parts, use, and proper care and storage of essential riding equipment.
- SLO #2-Demonstrate basic handling of the horse including catching, haltering, leading and tying.
- Groom the horse properly before and after riding.
- Saddle and bridle the horse properly.
- Mount and dismount the horse properly and safely.
- SLO #3-Recognize and practice basic horse handling safety skills while on the ground and when mounted.
- Demonstrate basic control of the horse in a round-pen situation at the walk and trot (jog) and recognize the footfall sequence for each gait.
- Safely load and unload a horse from a trailer.
- SLO #4-Demonstrate use of new and innovative techniques in equine handling.
- Demonstrate effective horse restraint.

**ANSC 307 Farrier Science**

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers horseshoeing principles and practices, including basic anatomy and physiology of the horse's limbs and feet, horseshoeing terminology, and guidelines for assessing a proper horseshoeing job. This course focuses on causes, treatment and prevention of common lameness problems.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1-Identify all bones, major ligaments, and tendons of the front and hind limbs and explain their physiological function.
- Diagram the internal and external parts of the hoof and analyze the function of each.
- Analyze the motion of various horses and appraise applicable trimming or shoeing techniques for maximum horse benefit.
- Assess a sample hoof and evaluate measures to gain proper balance.
- Analyze young horse potential foot problems.
- SLO #2-Design a plan to restore proper balance of the hoof.
- Diagnose unsoundness of hoof, appraise causes, and recommend remedies.
- Compare and contrast the different types and fitting of a horseshoe.
- Discuss alternatives for corrective shoeing.
- SLO #3-Evaluate a horseshoeing job for balance, symmetry, and correct angles.
- Compare and contrast various horseshoeing jobs for accuracy of placement, size and angle.

ANSC 495 Independent Study in Animal Science

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

ANSC 498 Work Experience in Animal Science
This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student’s progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER (SLO 1)**
  - Understand the effects of time, stress, and organizational management on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevance to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.

- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER (SLO 2)**
  - Link personal goals to long-term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.

- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)**

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Animal Science.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020
Anthropology | Cosumnes River College

Anthropology is the study of humans. Anthropologists study our species throughout time; focusing on our diverse modern culture and cultural adaptations, our biological classification as a species and our inclusion in the Order Primates, and our species past developments, including our first steps to our first civilizations. The goal of Anthropology is to study the similarities and differences in biological and cultural adaptations and features across the globe throughout our human history.

Associate Degrees for Transfer

A.A.-T. in Anthropology

The Associate in Arts in Anthropology for Transfer Degree (AA-T) is designed to meet common lower-division requirements for a major in Anthropology at California State University (CSU) campuses by completion of 60 transferable semester units with a minimum 2.0 GPA, to include either the California State University General Education Breadth pattern or the Intersegmental General Education Transfer Curriculum; students must earn a grade of C or better in all the courses for the major as described in the Required Program.

Anthropology is the study of humans. Anthropologists study our species throughout time; focusing on our diverse modern culture and cultural adaptations, our biological classification as a species and our inclusion in the Order Primates, and our species' past developments, including our first steps to our first civilizations. The goal of Anthropology is to study the similarities and differences in biological and cultural adaptations and features across the globe throughout our human history.

Anthropology is a holistic discipline, which means that anthropologists study all aspects of humans and our behavior. The field of Anthropology has been broken up into four main sub-fields: Cultural Anthropology, Biological Anthropology, Archaeology and Linguistics. Cultural Anthropology is concerned with the study of human culture and its variations across time and space. Biological Anthropologists aim to study our species from a biological perspective- examining our DNA, relationship to our closest animal relatives, the primates and the fossil evidence of our earliest human ancestors. Archaeology is the study of our past, focused specifically on reconstructing past behavior by looking at objects used by past people. Linguistic Anthropologists study human language and communication.

This degree offers courses that satisfy lower division General Education requirements in both the physical and social sciences, providing students with a solid foundation in anthropology as well as the standard prerequisites for upper division coursework leading to the baccalaureate degree. Students planning to transfer to a four-year school with a major in Anthropology should consult the lower division requirements at the university they plan to attend.

**Anthropology Electives:**

A minimum of 3 units from the following: 3

- ANTH 303  Introduction to Forensic Anthropology (3)
- ANTH 316  Global Forces in Culture Change (3)
- ANTH 324  World Prehistory (3)
- ANTH 331  The Anthropology of Religion (3)
- ANTH 332  Native Peoples of California (3)
- ANTH 334  Native Peoples of North America (3)
- ANTH 341  Introduction to Linguistics (3)
- ANTH 374  Birth to Death: The Anthropology of Primate Culture and Behavior (3)
- ANTH 336  Anthropology of Sex, Sexuality and Gender (3)

**Science Electives:**

- [[GEOL 300  Physical Geology (3)] and GEOL 301  Physical Geology Laboratory (1)]
- or [ GEOL 305  Earth Science (3)] and GEOL 306  Earth Science Laboratory (1)
- or GEOG 335  Introduction to Geographic Information Systems Applications (3)
- or PSYC 335  Research Methods in Psychology (3)

Total Units: 19 - 21

The Associate in Arts in Anthropology for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

  - Recognize the way in which research leads to generally accepted conclusions and the integration of new research data with the building of a body of scientific knowledge.
  - Recognize that the information presented in science textbooks and other established "authorities" is the result of research conducted in the field or the lab and is based on an accumulation of data.
  - Design a scientific inquiry.

- **CLEARLY EXPRESS SELF WHEN WRITING OR SPEAKING ABOUT ANTHROPOLOGY DEMONSTRATING KNOWLEDGE OF BASIC ANTHROPOLOGICAL TERMINOLOGY AND UNDERSTANDING MAJOR ANTHROPOLOGICAL CONCEPTS. (PSLO 2)**
  - Produce laboratory exercises or field projects which address background information, procedures, results and analysis of data developed during the event of activity.
  - Write essays explaining anthropological processes in clear and concise terms

- **DEMONSTRATE BOTH CONTENT KNOWLEDGE AND TEST TAKING SKILLS WHEN COMPLETING ESSAY, OBJECTIVE AND MULTIPLE CHOICE EXAMS. (PSLO 3)**
- Demonstrate problem solving abilities in major content areas of Anthropology including evolution, genetics, culture, archaeology and human evolution.
- Analyze the logic of multiple choice questions and choose the correct response from among related items.
- Write clear responses to essay question prompts without including extraneous information or omitting information necessary to provide a clear answer.
- Demonstrate content knowledge in the broad areas of anthropology including evolution, culture, genetics, archaeology and human evolution.
- UTILIZE APPROPRIATE FIELDWORK TECHNIQUES FOR ANTHROPOLOGY. (PSLO 4)
  - Conduct participation observation studies.
  - Take appropriate field notes while conducting participant observation studies.
  - Gather data in an appropriate, non-judgmental manner.
  - Perform skeletal measurements.
  - Identify major bones and features of both human and non-human primates.
- Design an anthropological experiment.
- Use diagrams, sketches and maps appropriately in field write-ups.
- EVALUATE ANTHROPOLOGICAL DATA, DRAW REASONABLE CONCLUSIONS, RECOGNIZE ETHICAL IMPLICATIONS OF THESE CONCLUSIONS AND APPLY THESE CONCLUSIONS TO PERSONAL, COMMUNITY AND SCIENTIFIC PROBLEMS. (PSLO 5)
  - Choose appropriate data to collect in order to address a specific hypothesis.
  - Collect data and keep organized records.
  - Use basic graphical and statistical analysis of data.
  - Reach and express logical conclusions drawn on anthropological data.
  - Present data in the form of posters, presentations, and/or written reports how anthropological information is relevant to personal and community issues.
  - Recognize the ethical implications of research on human subjects.
- EMPLOY INFORMATION GATHERING TOOLS TO INVESTIGATE ANTHROPOLOGICAL IDEAS. (PSLO 6)
  - Use the Internet in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.
  - Use the library in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.

Career Information

Anthropologists with baccalaureate or graduate degrees work as archaeological technicians or project directors for private, state or federal organizations, museum management, forensic specialists in police departments and crime labs, primatology and zoo curation, teaching, consultant or analyst for private, government or educational institutions, non-profit organizations, information technologies, tourism, public health services, and social work. NOTE TO TRANSFER STUDENTS: The Associate Degree for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as "double-counting"). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions, because many universities require more lower division courses than those in this degree. Even the CSUs that accept this transfer degree may likely require more lower division courses to achieve the Bachelor degree. It is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

Associate Degrees

A.S. in Anthropology

Anthropology is the study of humans. Anthropologists study our species throughout time; focusing on our diverse modern culture and cultural adaptations, our biological classification as a species and our inclusion in the Order Primates, and our species past developments, including our first steps to our first civilizations. The goal of Anthropology is to study the similarities and differences in biological and cultural adaptations and features across the globe throughout our human history.
Anthropology is a holistic discipline, which means that anthropologists study all aspects of humans and our behavior. The field of Anthropology has been broken up into four main sub-fields: Cultural Anthropology, Physical Anthropology, Archaeology and Linguistics. Cultural Anthropology is concerned with the study of human culture and its variations across time and space. Physical Anthropologists aim to study our species from a biological perspective - examining our DNA, relationship to our closest animal relatives, the primates and the fossil evidence of our earliest human ancestors. Archaeology is the study of our past, focused specifically on reconstructing past behavior by looking at objects used by past people. Linguistic Anthropologists study human language and communication.

The CRC Anthropology program offers courses that satisfy lower division General Education requirements in both the physical and social sciences. In addition, the program offers an Associate Degree in Anthropology that provides students with a solid foundation in anthropology as well as the standard prerequisites for upper division coursework leading to the baccalaureate degree. Students planning to transfer to a four-year school with a major in Anthropology should consult the lower division requirements at the university they plan to attend.

The Anthropology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Recognize the way in which research leads to generally accepted conclusions and the integration of new research data with the building of a body of scientific knowledge.

- Recognize that the information presented in science textbooks and other established “authorities” is the result of research conducted in the field or the lab and is based on an accumulation of data.

- Design a scientific inquiry.

- CLEARLY EXPRESS SELF WHEN WRITING OR SPEAKING ABOUT ANTHROPOLOGY DEMONSTRATING KNOWLEDGE OF BASIC ANTHROPOLOGICAL TERMINOLOGY AND UNDERSTANDING MAJOR ANTHROPOLOGICAL CONCEPTS. (PSLO 2)

- Produce laboratory exercises or field projects which address background information, procedures, results and analysis of data developed during the event of activity.

- Write essays explaining anthropological processes in clear and concise terms.

- DEMONSTRATE BOTH CONTENT KNOWLEDGE AND TEST TAKING SKILLS WHEN COMPLETING ESSAY, OBJECTIVE AND MULTIPLE CHOICE EXAMS. (PSLO 3)

- Demonstrate problem solving abilities in major content areas of Anthropology including evolution, genetics, culture, archaeology and human evolution.

- Analyze the logic of multiple choice questions and choose the correct response from among related items.

- Write clear responses to essay question prompts without including extraneous information or omitting information necessary to provide a clear answer.

- Demonstrate content knowledge in the broad areas of anthropology including evolution, culture, genetics, archaeology and human evolution.

- UTILIZE APPROPRIATE FIELDWORK TECHNIQUES FOR ANTHROPOLOGY. (PSLO 4)

- Conduct participation observation studies.

- Take appropriate field notes while conducting participant observation studies.

- Gather data in an appropriate, non-judgmental manner.

- Perform skeletal measurements.

- Identify major bones and features of both human and non-human primates.
• Design an anthropological experiment.
• Use diagrams, sketches and maps appropriately in field write-ups.
• EVALUATE ANTHROPOLOGICAL DATA, DRAW REASONABLE CONCLUSIONS, RECOGNIZE ETHICAL IMPLICATIONS OF THESE CONCLUSIONS AND APPLY THESE CONCLUSIONS TO PERSONAL, COMMUNITY AND SCIENTIFIC PROBLEMS. (PSLO 5)
• Choose appropriate data to collect in order to address a specific hypothesis.
• Collect data and keep organized records.
• Use basic graphical and statistical analysis of data.
• Reach and express logical conclusions drawn on anthropological data.
• Present data in the form of posters, presentations, and/or written reports how anthropological information is relevant to personal and community issues.
• Recognize the ethical implications of research on human subjects.
• EMPLOY INFORMATION GATHERING TOOLS TO INVESTIGATE ANTHROPOLOGICAL IDEAS. (PSLO 6)
• Use the Internet in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.
• Use the library in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.
• STUDENTS WILL EMBRACE CULTURAL DIVERSITY. (PSLO 7)
• Apply the concept of cultural relativism to real world situations.
• Develop the perspective of “global citizen” to encourage respect for the world's people and environment.
• Recognize factors of human biological and cultural variation.
• Celebrate the varied trajectory of our species from prehistory and into the future.

Career Information
Anthropologists with baccalaureate or graduate degrees work as archaeological technicians or project directors for private, state or federal organizations, museum management, forensic specialists in police departments and crime labs, primatology and zoo curation, teaching, consultant or analyst for private, government or educational institutions, non-profit organizations, information technologies, tourism, public health services, and social work.

A.S. in General Science
Areas of Study include:
• Physical Anthropology
• Astronomy
• Biology
• Chemistry
• Engineering
• Physical Geography
• Geology
• Physics

Eighteen (18) units of transfer level course work in science is required. Two laboratory courses must be included: one in the physical sciences and one in the biological sciences. Courses may be selected from astronomy, biology, chemistry, geology, physical geography, physical anthropology, and physics. The student, in consultation with a counselor, should choose science courses to meet his or her program, transfer, or general education requirements.

Students interested in transferring to a four-year university with a science major are encouraged to complete a science AS or AS-T degree such as Anthropology, Biology, Chemistry, Engineering, Geography, Geology, or Physics. This General Science degree may not include the majors-level transfer courses needed for many science majors. Students are strongly recommended to see a counselor for guidance.

</tbody>
</table>

1Courses used in A or B above will not count towards C, except units exceeding the 4 or 3 unit minimum in A and B. For example, a student completing the 5 unit CHEM 309 under B could apply 2 of those units towards C. A total of 18 science units is required.

*The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.*

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- explain the core perspectives of the scientific method and apply it to at least one scientific discipline. (SLO 1)
- solve introductory problems of a conceptual and/or numerical nature of at least one scientific discipline. (SLO 2)
- accurately apply the basic vocabulary and concepts of at least one scientific discipline verbally and in writing. (SLO 3)
- recognize the use and misuse of scientific concepts in society including politics and the media. (SLO 4)

**Anthropology (ANTH)**

**ANTH 300 Biological Anthropology**
This course is an introduction to the science of biological anthropology, and analyzes the human place in nature. Applying principles of genetics and evolution, this course will explore modern human variation and how we evolved, including the unique role of culture. The course also covers the classification and distribution of living and extinct human populations, how we determine the geological age of our ancestors, and our relationship to non-human primates such as monkeys and apes. Topics covered in this course include: the scientific method, principles and mechanisms of genetics and heredity, geological dating methods, classification of humans and our near relatives, social organization and behavior of living primates, comparative skeletal anatomy of humans and non-human primates. Local field trips may be required.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **APPLY GENERAL PRINCIPLES OF BIOLOGY, ANTHROPOLOGY AND GENERAL SCIENCE AS IT RELATES TO BIOLOGICAL ANTHROPOLOGY.**
  
  SLO 1
  
  - Describe the steps of scientific inquiry, including the formulation of scientific hypotheses and research design.
  
  - Describe the history of evolutionary thought and the mechanisms of evolution.
  
  - Define basic cellular and DNA components and functions.
  
  - Articulate concepts of transmission genetics (Mendelian inheritance) and solve problems using Punnett squares and pedigrees.
  
  - Explain how human physical variation is a result of both biology and adaptation to environmental conditions.
  
- **DESCRIBE THE CLASSIFICATION OF NON-HUMAN AND HUMAN PRIMATES IN A TAXONOMIC RELATIONSHIP FOCUSING ON THEIR EVOLUTIONARY ORIGINS AND SHARED BEHAVIOR.**
  
  SLO 2
  
  - Recognize and identify key features of primate classification, including defining physical characteristics of different taxonomic groups.
  
  - Discuss the classification of primates to illustrate evolutionary history.
  
  - Compare and contrast non-human primate and human behavior in areas such as conflict, cooperation, mating strategies and mate selection, feeding ecology, and use of the environment, utilizing socio-biological principles.
  
  - Compare and contrast anatomical features and structures of non-human primates and their relationship to behavior and environmental adaptation.
  
- **HYPOTHESIZE ABOUT A TRAJECTORY OF HUMAN EVOLUTION BASED ON KEY FOSSIL FINDS.**
  
  SLO 3
  
  - Summarize types of scientific dating methods and their applications to fossils
  
  - Construct a probable phylogeny for extinct hominids including evolutionary descent.
  
  - Evaluate current evidence of hominid fossils, genetic data and artifacts for their validity to understanding human evolution.
  
  - Recognize problems when evaluating fossil evidence.
This course is an introductory laboratory course designed to provide students with an opportunity to become familiar with the methods of the science of biological anthropology while investigating topics in laboratory and field situations. Topics covered in the course are: the scientific method, sources of biological variation and forces of evolution, human osteology (bone identification), human variation, taxonomy and comparative osteology of the primates, comparative behavior, and the fossil evidence for human evolution. A field trip to the local zoo will be included. This course is designed as a companion course to Anthropology 300 - Biological Anthropology.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **ARTICULATE GENERAL PRINCIPLES OF BIOLOGY, ANTHROPOLOGY AND GENERAL SCIENCE AS THEY RELATE TO PHYSICAL ANTHROPOLOGY.** (SLO 1)
  - Identify the steps of scientific inquiry and formulate basic scientific hypotheses.
  - Demonstrate knowledge of the basic principles of Mendelian and population genetics by solving Punnett squares and pedigrees.
  - Define basic cellular and DNA components and functions.
  - Explore the mechanisms of evolution.
  - **DEMONSTRATE KNOWLEDGE OF OSTEOLOGY, ANALYZE MEASUREMENTS OF BONES AND APPLY FORENSIC TECHNIQUES.** (SLO 2)
    - Identify bones and significant features of bones of the human skeleton.
    - Perform measurements to describe age and sex related variability in skeletal remains.
    - Analyze skeletal remains to determine probable cause of death and life history events.
  - DEVELOP UNDERSTANDING OF THE CLASSIFICATION OF PRIMATES AND HUMANS IN A TAXONOMIC RELATIONSHIP, THEIR EVOLUTIONARY ORIGINS AND SHARED BEHAVIOR. (SLO 3)
    - Recognize characteristics of living primates that are useful for identification and interpretation of non-human primate and human fossils.
    - Compare and contrast skeletons of prosimians, monkeys, apes, and humans to elucidate patterns of locomotion and dietary adaptation.
    - Compare and contrast behaviors of living primates as they relate to environmental adaptation.
    - UNDERSTAND A TRAJECTORY OF HUMAN EVOLUTION BASED ON KEY FOSSIL FINDS. (SLO 4)
    - Identify significant anthropoid, hominoid, and hominid fossils.
    - Evaluate alternative interpretations of fossil evidence.
    - Recognize specific characteristics used to differentiate hominid fossil species and how they relate to patterns of adaptation and evolution of the species.
    - Analyze the material cultural adaptations (artifacts) and the roles they have played in human evolution.
    - Describe the biological and behavioral adaptations of the genus Homo.

### ANTH 303 Introduction to Forensic Anthropology

| Units: | 1 |
| Hours: | 54 hours LAB |
| Prerequisite: | None. |
| Corequisite: | ANTH 300 |
| Advisory: | MATH 100, or placement through the assessment process. |
| Transferable: | CSU; UC |
| General Education: | CSU Area B3; IGETC Area 5C |
| C-ID: | C-ID ANTH 115L |
| Catalog Date: | June 1, 2020 |

This course is an introductory laboratory course designed to provide students with an opportunity to become familiar with the methods of the science of biological anthropology while investigating topics in laboratory and field situations. Topics covered in the course are: the scientific method, sources of biological variation and forces of evolution, human osteology (bone identification), human variation, taxonomy and comparative osteology of the primates, comparative behavior, and the fossil evidence for human evolution. A field trip to the local zoo will be included. This course is designed as a companion course to Anthropology 300 - Biological Anthropology.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **ARTICULATE GENERAL PRINCIPLES OF BIOLOGY, ANTHROPOLOGY AND GENERAL SCIENCE AS THEY RELATE TO PHYSICAL ANTHROPOLOGY.** (SLO 1)
  - Identify the steps of scientific inquiry and formulate basic scientific hypotheses.
  - Demonstrate knowledge of the basic principles of Mendelian and population genetics by solving Punnett squares and pedigrees.
  - Define basic cellular and DNA components and functions.
  - Explore the mechanisms of evolution.
  - **DEMONSTRATE KNOWLEDGE OF OSTEOLOGY, ANALYZE MEASUREMENTS OF BONES AND APPLY FORENSIC TECHNIQUES.** (SLO 2)
    - Identify bones and significant features of bones of the human skeleton.
    - Perform measurements to describe age and sex related variability in skeletal remains.
    - Analyze skeletal remains to determine probable cause of death and life history events.
  - DEVELOP UNDERSTANDING OF THE CLASSIFICATION OF PRIMATES AND HUMANS IN A TAXONOMIC RELATIONSHIP, THEIR EVOLUTIONARY ORIGINS AND SHARED BEHAVIOR. (SLO 3)
    - Recognize characteristics of living primates that are useful for identification and interpretation of non-human primate and human fossils.
    - Compare and contrast skeletons of prosimians, monkeys, apes, and humans to elucidate patterns of locomotion and dietary adaptation.
    - Compare and contrast behaviors of living primates as they relate to environmental adaptation.
    - UNDERSTAND A TRAJECTORY OF HUMAN EVOLUTION BASED ON KEY FOSSIL FINDS. (SLO 4)
    - Identify significant anthropoid, hominoid, and hominid fossils.
    - Evaluate alternative interpretations of fossil evidence.
    - Recognize specific characteristics used to differentiate hominid fossil species and how they relate to patterns of adaptation and evolution of the species.
    - Analyze the material cultural adaptations (artifacts) and the roles they have played in human evolution.
    - Describe the biological and behavioral adaptations of the genus Homo.
This course provides an overview of forensic anthropology, which is an applied field of biological anthropology. Forensic anthropologists answer questions of medicolegal significance by applying techniques designed for the analysis of human skeletal remains. This course will focus on the introductory techniques used for human skeletal identification and trauma analysis. This identification will provide understanding of the broader aspects of applied anthropology and its role working with law enforcement agencies, human rights issues as well as ethical considerations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DESCRIBE THE SCIENTIFIC METHODS AND THEORIES USED BY ANTHROPOLOGISTS WITHIN A FORENSIC CONTEXT (SLO 1)
- Recall and apply anatomical terminology to identify human skeletal anatomy (Objective 1a)
- Recognize accepted methodology to estimate sex, age, stature and ancestry to human skeletal remains (Objective 1b)
- DERIVE AN INTRODUCTORY ASSESSMENT OF THE CHANGES IN SKELETAL REMAINS OVER TIME DUE TO VARIOUS FACTORS (SLO 2)
- identify environmental conditions such as weather and burial conditions as possible modifiers to skeletal material (Objective 2a)
- Draft a preliminary hypothesis concerning possible antemortem changes in the skeleton such as trauma (Objective 2b)
- Propose an initial assessment of skeletal remains using published case studies (Objective 2c)
- ARTICULATE THE LEGAL AND ETHICAL RESPONSIBILITIES INVOLVED WITH WORKING WITH HUMAN REMAINS IN VARIOUS FORENSIC CONTEXTS (SLO 3)
- Discuss the responsibilities and potential issues involved in the positive identification of remains (Objective 3a)
- Appreciate the roles of forensic anthropologists in local and global settings (Objective 3b)
- Critique the effectiveness of forensic anthropology as a tool in scientific and social contexts (Objective 3c)

ANTH 310 Cultural Anthropology

This course is an introduction to the cultures and customs of human groups throughout the world with the aim of understanding how cultures function based on their world views. Topics include subsistence methods, religious belief systems, linguistics, economics, political organization, kinship, gender, marriage and family systems, social stratification, and globalization. This course stresses anthropological concepts such as culture, cultural relativism, holism, ethnocentrism, cross-cultural comparisons, world view, culture change, fieldwork, ethics and theory. A field trip may be required at the discretion of the instructor.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING OF CULTURAL ANTHROPOLOGY. (SLO 1)
- Recognize the scientific and humanistic approaches to cultural anthropology.
- Explain how cultural anthropologists use a four-field approach and an applied perspective.
- Evaluate cultural anthropological theories and understand how they have been used to view culture and society.
- Appraise field methods, such as ethnography, and ethical considerations in anthropology.
- EXPLORE DIVERSITY OF HUMAN CULTURE, INCLUDING CULTURAL TRADITIONS AND BELIEF SYSTEMS. (SLO 2)
- Employ important anthropological concepts such as cultural relativism, holism, world view, enculturation, ethnocentrism and culture.
- Utilize both an insider (emic) and outsider (etic) point of view to analyze cultural behavior and critique the benefits of each perspective.
Recognize how stratification occurs at the levels of family/kin, economic, social and political levels and how it impacts the culture as a whole.

Comprehend how environmental, social and political change can effect cultural adaptation, such as the switch from foraging to food production.

Demonstrate awareness of how groups delineate cultural boundaries such as sex, gender, race/ethnicity, religious beliefs and sub groups.

EVALUATE THE IMPORTANCE OF SYMBOLIC FORMS OF COMMUNICATION IN HUMAN CULTURES. (SL0 3)

Appraise the role of language in learning, enculturation and cross-cultural communication.

Recognize the importance of linguistic diversity and the problem of language extinction.

ASSESS GLOBAL TRENDS IN CULTURE CHANGE. (SLO 4)

Examine culture change for indigenous groups based on colonialism and globalization.

Appraise the creation of global culture and processes of cultural homogenization.

ANTH 313 Introduction to Cultural Anthropology: Medical Focus

This course is an introduction to the cultures and customs of human groups throughout the world with the aim of understanding how cultures function based on their world views. Topics include subsistence methods, religious belief systems, linguistics, economics, political organization, kinship, gender, marriage and family systems, social stratification, and globalization. This course emphasizes the intersection of culture and medical practices, perspectives on healing and health, and the notion that biology and culture matter equally in the human experience of disease. Through ethnographic examples the course stresses anthropological concepts such as culture, cultural relativism, holism, ethnocentrism, cross-cultural comparisons, world view, culture change, fieldwork, ethics and theory. This Introduction to Cultural Anthropology course is highly recommended for students pursuing degrees in the health fields. This class is not intended for students who have already completed Anthropology 310. A field trip may be required at the discretion of the instructor.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING OF CULTURAL ANTHROPOLOGY. (SLO 1)
- Recognize the scientific and humanistic approaches to cultural anthropology.
- Explain how cultural anthropologists use a four-field approach and an applied perspective.
- Evaluate cultural anthropological theories and understand how they have been used to view culture and society.
- Appraise field methods, such as ethnography, and ethical considerations in anthropology.

- EXPLORE DIVERSITY OF HUMAN CULTURE, INCLUDING CULTURAL TRADITIONS AND BELIEF SYSTEMS. (SLO 2)
- Employ important anthropological concepts such as cultural relativism, holism, world view, enculturation, ethnocentrism and culture.
- Utilize both an insider (emic) and outsider (etic) point of view to analyze cultural behavior and critique the benefits of each perspective.
- Recognize how stratification occurs at the levels of family/kin, economic, social and political levels and how it impacts the culture as a whole.
- Comprehend how environmental, social and political change can effect cultural adaptation, such as the switch from foraging to food production.
- Demonstrate awareness of how groups delineate cultural boundaries such as sex, gender, race/ethnicity, religious beliefs and sub groups.
- EVALUATE THE IMPORTANCE OF SYMBOLIC FORMS OF COMMUNICATION IN HUMAN CULTURES. (SL0 3)
Appraise the role of language in learning, enculturation and cross-cultural communication.
Recognize the importance of linguistic diversity and the problem of language extinction.
ASSESS GLOBAL TRENDS IN CULTURE CHANGE. (SLO 4)
Examine culture change for indigenous groups based on colonialism and globalization.
Appraise the creation of global culture and processes of cultural homogenization.
APPRAISE THE IMPORTANCE OF MEDICAL ANTHROPOLOGY IN THE HEALTH AND MEDICAL FIELDS. (SLO 5)
Recognize the importance of culture in the diagnosis, treatment, and cure of illness.
Examine ways in which medical anthropology can be applied to the care of patients.

ANTH 316 Global Forces in Culture Change

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligibility for ENGWR 300 or the equivalent skills demonstrated through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area V(f); CSU Area D1; IGETC Area 4A
Catalog Date: June 1, 2020

The course will focus on how global forces in culture change have an impact on groups of people within the United States and non-western cultures, such as European colonialism (including the slave trade), minority and indigenous people activism, and a redefinition of male and female roles with migration. The course considers such global forces as modernization, development, trade and finance, tourism, migration and refugees, transnationalism, ethnicity and diasporas, technology and digital media, and tribal cultures. Culture change will be illustrated through various ethnographic examples and includes issues such as women's issues, AIDS/HIV, underemployment, famine, terrorism, the digital divide, and overpopulation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING OF GLOBAL FORCES SHAPING THE CONTEMPORARY WORLD. (SLO 1)
  - Explain how colonialism and capitalism have shaped global inequality.
  - Understand the influence of non-governmental organizations, terrorist groups, and grass roots movements as "non-state" actors capable of shifting world power dynamics.
  - Evaluate the impact of population movements of unprecedented scale (migrants, refugees, and tourists) for the environment, cultural identity, and global politics.
- UNDERSTAND THE DYNAMICS OF CULTURE CHANGE FROM AN ANTHROPOLOGICAL PERSPECTIVE. (SLO 2)
  - Recognize how long-term ethnographic research is necessary for studying culture change over time.
  - Utilize anthropological theories to explain global culture change in the past, present, and future.
- UNDERSTAND THE MECHANISMS OF CULTURE CHANGE AND BE ABLE TO COMPARE AND CONTRAST THE RESPONSES OF DIFFERENT CULTURES. (SLO 3)
  - Recognize the importance of diffusion, invention, and forced culture change in contemporary cultures.
  - Evaluate how local cultural responses in turn can impact and change global forces.

ANTH 323 Introduction to Archaeology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligibility for ENGWR 300 or the equivalent skills demonstrated through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D1; IGETC Area 4A
C-ID: C-ID ANTH 150
Catalog Date: June 1, 2020
This course is an introduction to the concepts, methods and theoretical perspectives employed in the scientific study of archaeology. Emphasis will be placed on how data is retrieved from the archaeological record, and how it can be used to address questions about the development and evolution of human social systems. Topics will include archaeological theory, survey and excavation methods, laboratory analysis, reconstructing past environments, and drawing conclusions about the past from archaeological data. This course will draw upon examples from the New World as well as archaeological examples worldwide. A field trip may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- IDENTIFY THE APPROPRIATE ARCHAEOLOGICAL THEORIES AND METHODS USED TO INVESTIGATE ARCHAEOLOGICAL SITES. (SLO 1)
- Propose the appropriate dating technique to use on different archaeological materials.
- Critique the different theoretical approaches in archaeological investigations.
- Utilize appropriate mapping, excavation and collection techniques of archaeological sites and artifacts.
- Recognize appropriate mapping, excavation and collection techniques of archaeological sites and artifacts.
- INTERPRET ARCHAEOLOGICAL DATA TO FORM CONCLUSIONS ABOUT PAST USAGE OF ARCHAEOLOGICAL SITES. (SLO 2)
- Apply inquiry methods used by archaeologists to reconstruct past landscapes and social systems.
- Evaluate the effectiveness of different theoretical approaches at evaluating archaeological data.
- Analyze and describe how archaeological knowledge can be applied to the study of modern humans and our societies.

ANTH 324 World Prehistory

3 units
54 hours LEC
None.
CSU; UC
AA/AS Area V(b); AA/AS Area VI; CSU Area D1; IGETC Area 4A
June 1, 2020

This course is a broad survey of world prehistory, from an archaeological perspective. Patterns of culture change will be examined beginning at the emergence of human culture through the development of domestication of plants and animals, to the development of literate societies capable of recording their own history (in writing). Included are major cultural developments on every continent, emphasizing similarities and differences in the nature and timing of key technological, cultural, and social changes. The course will be focused around several key developments in human societies including the transition out of the last ice age, domestication of plants and animals, the establishment of "complex" societies, and the development of important technologies, including pottery and writing. Methodologies for learning about the past, major archaeological discoveries, important personalities, and contributions to the modern world are discussed in the context of understanding the strengths and limitations of a scientific approach to human prehistory.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- IDENTIFY THE APPROPRIATE ARCHAEOLOGICAL THEORIES AND METHODS USED TO INVESTIGATE ARCHAEOLOGICAL SITES. (SLO 1)
- Propose the appropriate dating technique to use on different archaeological materials.
- Recognize the different theoretical approaches in archaeological investigations, and how they have shaped the understanding of world prehistory.
- Interpret archaeological data to form conclusions about past usage of archaeological sites.
- PRODUCE A TRAJECTORY OF KEY EVENTS IN HUMAN PREHISTORY, INCLUDING HUMAN EVOLUTION AND DOMESTICATION OF PLANTS AND ANIMALS. (SLO 2)
- Evaluate current evidence of hominid fossils, artifacts, and archaeological sites and their validity in understanding human evolution.
- Recognize the potential problems in evaluating fossil evidence and interpreting archaeological sites.
- Evaluate the various theories concerning the inception of agriculture.
- Identify key archaeological sites relating to human evolution and the beginnings of agriculture.
APPRECIATE THE VARIATION OF PAST CIVILIZATIONS ACROSS THE GLOBE FROM AN ARCHAEOLOGICAL PERSPECTIVE. (SLO 3)

- Illustrate differences in various civilizations as a result of past history, environment, and technology.
- Recognize the impact of famous archaeological sites, such as Machu Picchu, Teotihuacan, and Giza on the study of human prehistory.
- Interpret the archaeological record and the evidence for the impact of ethnocentrism, ethnic identity, age, class, gender, conquest by outside groups, religion on the development of civilizations.
- Build a foundation of understanding of cultural tolerance of various modes of adaptation in the past and the development of different cultures, including their ideas, cultural values, religions, artistic expression and many other features from across the globe.

ANTH 331 The Anthropology of Religion

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisites: | None. |
| Advisory: | Eligibility for ENGWR 300 or the equivalent skills demonstrated through the assessment process. |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area V(b); AA/AS Area VI; CSU Area D; IGETC Area 4 |
| Catalog Date: | June 1, 2020 |

This course is a cross-cultural study of the forms and functions of supernatural beliefs and associated rituals in various societies around the world. Emphasis of the course is on understanding beliefs and rituals within their social contexts and on broad comparisons to derive insight into the general functions of beliefs and rituals in human life. Students who have already completed ANTH 330 should not enroll in this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING OF ANTHROPOLOGY AND CULTURE. (SLO 1)
  - Define culture and religion.
  - Explain the four field approach and the applied perspective.
  - Evaluate anthropological theories on religious behavior and understand how they have been used to reduce anxiety and promote social solidarity.
  - Construct or analyze an ethnographic field study.
- EVALUATE THE ROLE OF RELIGION AND SUPERNATURAL BELIEFS IN SOCIETY. (SLO 2)
  - Describe the function of belief, religion, ritual, myth, symbols and taboo.
  - Recognize the distinction between religious specialists such as prophets, priests, shamans, and diviners.
  - Compare medical models of different cultures (ethnomedicine) emphasizing their belief systems, attributed causes and traditional cures as well as the efficacy of such approaches.
  - Explore cross-cultural approaches to and attitudes about altered states of reality/consciousness.
  - Examine how various cultures deal with death and dying including funerary and mortuary practices and beliefs about the afterlife.
- APPLY GENERAL PRINCIPLES OF ANTHROPOLOGY TO THE ANALYSIS OF SUPERNATURAL BELIEFS AND PRACTICES. (SLO 3)
  - Describe the impact of conflicting religious/spiritual beliefs and the effects it has on traditions and society, including marginalization, adaptation and syncretism.
  - Assess how people communicate with the supernatural through ceremonies and rituals.
  - Analyze the basis for supernatural contact achieved through meditation, ordeal or deprivation.
  - Delineate the roles of supernatural entities in the affairs of humans.
  - Elucidate the different types of organized religions: Cults, sects and established groups and explore the functions of revitalization movements, fundamentalism, beliefs in apocalypses, messiahs and salvation as anthropological concepts.
  - Examine the role of human biology and evolution in the origins of religion and ritual.
ANTH 332 Native Peoples of California

This course provides a study of the many cultures of the different native inhabitants of California from the prehistoric period through the present time, introducing the diversity and complexity of aboriginal California. Topics include native ecological adaptations, material culture, social structure, language, religion and mythology, ideology and worldview, and response to change. The course critically examines the impact of Native Californian cultures on each other as well as interactions between Native Californians and other Native Americans, Americans, Europeans, Africans, Asians, Pacific Islanders, and others. Perspectives on changes in traditional life and Native Californians’ current position in American society will be included as well as contributions of Native Californians to the cultures of the Americas. A field trip may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EXPLAIN THE DIVERSITY OF NATIVE CALIFORNIANS (SLO 1)
  - Create a map illustrating the major culture areas of California.
  - Recognize the environment of each of the major cultural groups and scientifically validate consequential ecological adaptations, including the diagnostic cultural features of the group(s) in each area.
  - Compare and contrast Native Californian social and cultural systems with those of other major Native North American culture areas such as the Southwest, Arctic, and Great Basin.
  - Evaluate the linguistic diversity and complexity of Native California.

- INTERPRET RESEARCH TO DESCRIBE PAST LIFEWAYS (SLO 2)
  - Utilize ethnographic texts and interpret archaeological data to assess Native California technology, subsistence, and other cultural adaptations.
  - Examine the various interpretations and historical significance of Native Californians in anthropology.

- EVALUATE CONTEMPORARY ISSUES OF NATIVE CALIFORNIANS (SLO 3)
  - Examine from an anthropological perspective a source of present day culture conflicts experienced by Native Californians, including at least one of the following: inter-tribal conflict, conflict with other minority groups, or conflict with dominant European American culture.
  - Explain and appraise current issues (ex: bias; cultural assumptions; financial stability; racial politics; and differences relating to class, gender, and age) among Native Californians within tribal groups and cross-tribally.

ANTH 334 Native Peoples of North America

This course is an introductory survey of the cultures of the different native inhabitants of North America from the prehistoric period through the present time. Topics include native ecological adaptations, material culture, social structure, language, religion and mythology, ideology and worldview, and response to change. The course critically examines the impact of Native American cultures on each other as well as the interactions between Native Americans and Europeans, Africans, Asians, Pacific Islanders and others. Perspectives on changes in traditional life and Native Americans’ current positions in North American societies will be included as well as contributions of Native Americans to the cultures of the Americas. A field trip may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
EXPLAIN THE DIVERSITY OF NATIVE NORTH AMERICANS (SLO 1)

- Create a map illustrating the major culture areas of North America.
- Recognize the environment of each of the major culture areas of North America and scientifically validate the consequential ecological adaptations including the diagnostic cultural features of the group(s) in each area.
- Evaluate the linguistic diversity and complexity of Native North America.

INTERPRET RESEARCH TO DESCRIBE PAST LIFEWAYS (SLO 2)

- Utilize ethnographic texts and interpret archaeological data to understand Native American technology, subsistence, and other cultural adaptations.
- Examine the various interpretations and historical significance of Native Americans in anthropology.

EVALUATE CONTEMPORARY ISSUES OF NATIVE AMERICANS (SLO 3)

- Examine from an anthropological perspective a source of present day culture conflict between Native Americans and the dominant Euro-American, Canadian, and Mexican cultures.
- Explain and appraise current issues (ex: bias; cultural assumptions; financial stability; racial politics; and differences relating to class, gender, and age) among Native Americans within tribal groups and cross-tribally.

ANTH 336 Anthropology of Sex, Sexuality and Gender

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** ANTH 300 (Physical Anthropology) or ANTH 310 (Cultural Anthropology) with a grade of "C" or better, and eligibility for ENGWR 300 (College Composition).
- **Advisory:** CSU; UC
- **Transferable:** AA/AS Area V(b); AA/AS Area VI; CSU Area D; IGETC Area 4
- **General Education:** AA/AS Area V(b); CSU Area D; IGETC Area 4
- **Catalog Date:** June 1, 2020

This course provides an introductory overview of anthropological perspectives on sex, sexuality and gender, drawing from all four sub-fields (archaeology, cultural, linguistic, and physical). Topics will include cross-cultural comparisons of the diversity of sex, sexuality, and gender, comparisons of sexual behavior among extinct human ancestors and non-human primates such as monkeys and apes, drawing conclusions about the past from archaeological data, examining the nature/nurture debate, and examining evolutionary perspectives related to sex, sexuality and gender. A field trip may be required at the discretion of the instructor.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **IDENTIFY CULTURAL ANTHROPOLOGICAL THEORIES, METHODS, AND CONCEPTS IN RELATION TO THE STUDY OF SEX, SEXUALITY, AND GENDER. (SLO 1)**
  - Describe cross-cultural diversity of gender and sexuality from the smallest indigenous societies to the largest industrial societies.
  - Identify and apply ethical dilemmas in anthropological research on sex, sexuality and gender.
  - Recognize how issues related to sex, sexuality, and gender affect society.
  - Distinguish how cultural anthropological approaches to understanding sex, sexuality, and gender benefit from a holistic perspective.

- **IDENTIFY LINGUISTIC ANTHROPOLOGICAL THEORIES, METHODS, AND CONCEPTS IN RELATION TO THE STUDY OF SEX, SEXUALITY, AND GENDER. (SLO 2)**
  - Explain how language is gendered and sexualized.
  - Review and apply the societal implications of gendered and or sexualized language.
  - Distinguish how linguistic anthropological approaches to understanding sex, sexuality, and gender benefit from a holistic perspective.

- **IDENTIFY ARCHAEOLOGICAL THEORIES, METHODS, AND CONCEPTS IN RELATION TO THE STUDY OF SEX, SEXUALITY, AND GENDER. (SLO 3)**
  - Summarize cross-cultural gender and sexuality diversity in the ancient past.
  - Explain and assess the issues associated with analyzing gender, sex, and sexuality in the archaeological record.
  - Evaluate representations of gender and sexuality diversity in media portrayals of prehistory.
Distinguish how archaeological approaches to understanding sex, sexuality, and gender benefit from a holistic perspective.

IDENTIFY PHYSICAL ANTHROPOLOGICAL THEORIES, METHODS, AND CONCEPTS IN RELATION TO THE STUDY OF SEX, SEXUALITY, AND GENDER. (SLO 4)

Describe the diversity of human biological sex and sexuality spectra.

Explain how human physical variation and behavior is a result of both biology and culture.

Compare sex differences and sexuality among non-human primates such as monkeys and apes and among extinct and modern humans.

Distinguish how physical anthropological approaches to understanding sex, sexuality, and gender benefit from a holistic perspective.

ANTH 341 Introduction to Linguistics

This course explores the role of language in social interaction and world view. It examines minority languages and dialects, bilingualism, literacy and the social motivation of language change through technology, globalization, and colonialism. The student will also be introduced to the analytical techniques of linguistics, the universal structures of language, and the demonstration of their relevance to language in sociocultural issues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• DEMONSTRATE AN UNDERSTANDING OF ANTHROPOLOGICAL LINGUISTICS. (SLO 1)
  Appreciate the dynamic relationship between culture, language, and speakers.
  Comprehend the Sapir-Whorf hypothesis and its importance in anthropological linguistics.
  Recognize the importance of prosody, nonverbal communication, and symbolic communication.
  Identify the ways in which cultural diversity expresses itself in language.
• COMPREHEND THE THEORIES AND METHODS USED TO INTERPRET LANGUAGES AND THEIR RELATIONSHIPS TO CULTURE. (SLO 2)
  Recognize the history of language families and how to trace protolanguages.
  Describe the evolution of human language through non-human primate communication, childhood language acquisition, and Creole languages.
  Describe the process of linguistic divergence and the creation of new languages or dialects.
  Appreciate the role of research and different methodologies in the development of anthropological theory.
• INTERPRET AND DESCRIBE LANGUAGE USING STRUCTURAL LINGUISTIC TECHNIQUES. (SLO 3)
  Recognize a language from a holistic perspective by demonstrating knowledge of phonetics, phonology, morphology, syntax, and semantics.
  Utilize the techniques of structural linguistics to analyze different languages.
• ARTICULATE IMPORTANT THEMES OF ANTHROPOLOGY AND HOW THEY APPLY TO LINGUISTICS. (SLO 4)
  Demonstrate an awareness of the “ethnography of speaking” or how race, class, gender, ethnicity, age and sexual orientation intersect with language use.
  Appreciate the role of writing and literacy in cultural adaptation.
  Identify how globalization, culture change, and power transform languages and intensify the extinction of languages.
  Recognize the impact of new technologies such as cell phones, text messaging, instant messaging, and the Internet on language.
ANTH 374 Birth to Death: The Anthropology of Primate Culture and Behavior

This course will provide an overview of the life cycle of all primates, including humans, from an anthropological perspective. The basic biology behind the human life cycle will be examined and compared to nonhuman primates. Human and nonhuman primate life histories will be examined cross-culturally and will be compared and contrasted in light of their evolution and origins. The class will stress how cultural practices interact and support optimal reproductive behavior. Topics will include gestation and birth, adolescence, mating strategies and group structure, adulthood and senescence.

Upon completion of this course, the student will be able to:

- ANALYZE PATTERNS OF REPRODUCTIVE BEHAVIOR IN HUMANS AND PRIMATES WITH RESPECT TO GENETICS AND ENVIRONMENTAL FACTORS (SLO 1)
- Assess evolutionary trends of human and primate behavioral patterns (Objective 1a)
- Compare and contrast the evolution and origin of parenting, mating, mate selection, cooperation and conflict, war, puberty rituals and death rites in several primate species and human cultures (Objective 1b)
- Describe variation seen in nonhuman primate reproductive behavior in an evolutionary context (Objective 1c)
- Critically examine current societies' behavior in modifying reproduction and explain how it affects evolution (Objective 1d)
- ARTICULATE THE SCIENTIFIC PRINCIPLES OF BIOLOGY AND ANTHROPOLOGY AS RELATED TO PRIMATE REPRODUCTION (SLO 2)
- Demonstrate an understanding of the primate reproductive system (Objective 2a)
- Describe the process of evolution by natural selection (Objective 2b)
- Define basic cellular processes, including meiosis and mitosis (Objective 2c)
- Articulate concepts of transmission genetics such as Mendelian inheritance (Objective 2d)
- Discuss common primate mating systems and how they relate to human marriage practices (Objective 2e)
- Use appropriate anthropological terminology such as those describing kinship, descent and modes of subsistence (Objective 2f)

ANTH 495 Independent Studies in Anthropology

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

Use information resources to gather discipline-specific information.

SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

Explain the importance of the major discipline of study in the broader picture of society.

SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

ANTH 498 Work Experience in Anthropology

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student’s progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER.(SLO 1)

- Understand the effects time, stress, and organizational management have on performance.

- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.

- Examine the career/life planning process and relate its relevancy to the student.

- Demonstrate an understanding of basic communication tools and their appropriate use.

- Demonstrate an understanding of workplace etiquette.

- DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER.(SLO 2)

- Link personal goals to long term achievement.

- Display an understanding of creating a professional first impression.

- Understand how networking is a powerful job search tool.

- Understand necessary elements of a résumé.

- Understand the importance of interview preparation.

- Identify how continual learning increases career success.
DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)
Architectural Design Technology
| Cosumnes River College

The Interior Building Architecture Program provides students with a background in Architectural Drafting. Students who successfully complete the suggested program will be capable of doing detail and layout work normally expected of the drafting aide or technician. The program is designed to provide transfer opportunities in the Environmental Design and/or Construction Management disciplines as well as opportunities for students to qualify for employment in a variety of positions within related industries.

Dean
 (916) 691-4300
✉ HarrisC2@crr.losrios.edu

Associate Degrees

A.S. in Building Information Modeling (BIM)

This Degree program provides students with a background in Computer-Aided Drafting & Design (CADD) and Building Information Modeling (BIM) for application to the architectural building space and design of buildings, interior space analysis and design to facilitate selection of materials & products promoting energy conservation, ecologically sustainable building space and building design using Green Building/LEED point principles.

Students who successfully complete the suggested program will be capable of performing pre-modeling (massing), modeling, and developing drawing documents normally expected of architects, designers, and drafting technicians.

The program is designed to provide job market skills, and college transfer skill opportunities within the Architectural Design disciplines and/or Construction Management as well as opportunities for students to qualify for employment in a variety of positions within the related industries. Additionally, this program offers opportunities for working professionals to take these courses for professional development to update and improve their skills in the Building Information Modeling field.

Note: It is highly recommended that each student keep a complete record of semester work/projects (i.e., a portfolio) to present for evaluation by university/college program advisors and/or employers.

This degree program utilizes various Building Information Modeling (BIM) software components, such as Revit Architecture, MEP, and Structure to prepare students for careers and college transfer in the area of Interior Building Architecture, Architecture, and Building Information Modeling (BIM), with an emphasis in the Architectural Technology area.

Highlights: State-of-the-Art computer lab and software.

The Building Information Modeling (BIM) Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **SLO #1**: Research, evaluate and apply energy conservation, ergonomic considerations, American Disabilities Act (ADA), ecologically sustainable design solution and principles (Green Building/LEED) to design projects.
- **SLO #2**: Formulate, categorize and identify Green Building/LEED certified materials and systems for use in residential and commercial projects.
- **SLO #3**: Organize, categorize and illustrate the development of initial models into architectural design documents, individually or through work group methods.
- **SLO #4**: Demonstrate, summarize and recall visual and verbal note taking methods and apply the information into models and finalized residential and commercial project designs.
- **SLO #5**: Assess, compose and analyze architectural graphic information effectively to create solutions from a criteria matrix, bubble diagram and block diagramming methods.
- **SLO #6**: Choose, assemble and distinguish the necessary skills in developing marketable BIM/CADD skills for university transfer and the job market, through measurable methods in project development and presentations.

### Career Information

Architectural Draftsperson, Designer/Technician, Planning Assistant, CADD Technician, BIM Technician, Facilities/Space Planner.

### A.S. in Interior Building Architecture

This Associate Science program utilizes CADD and Building Information Modeling (BIM) software to prepare students for careers in the area of Interior Building Architecture, Architecture, with an emphasis in Architectural Design. Students who successfully complete the suggested program will be capable of performing pre-modeling (massing), modeling, and developing drawing documents normally expected of architects, designers, and technicians.

The program is designed to provide job market skills, college transfer opportunities in the Interior Building Architecture, Architecture and/or Construction Management disciplines as well as opportunities for students to qualify for employment in a variety of positions within related industries. Additionally, this program offers opportunities for working professionals to take these courses for professional development to update and improve their skills in the interior building architecture field.

**NOTE:** It is highly recommended that each student keep a complete record of work to present for evaluation by university/college program advisors and/or employers.

This degree program utilizes CADD and Building Information Modeling software components, such as Revit Architecture, MEP, and Structure to prepare students for careers in Interior Building Architecture, Architecture, Building Information Modeling (BIM), with an emphasis in Architectural Technology field.

**Highlights:** State-of-the-art computer lab and software.

Green Buildings Certificate

The purpose of this certificate is to develop job skills and an understanding of green strategies for high performance buildings and livable communities. It is focused at students and professionals in the fields of architecture; construction; building management; construction management; building inspection; design technology; landscape; and planning, who want to acquire a comprehensive knowledge of an integrated, economic life-cycle approach to the design of the built environment. It includes study of green rating systems, material choices and environmental strategies for a livable, sustainable future.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- **PSLO 1**: Establish meaningful ethical, social and environmental objectives for buildings and communities based on the values of energy and resource conscious design.
- Compare and contrast societal and economic implications of utilizing renewable and non-renewable energy sources.
- Compare and contrast the effect of contextual issues and evaluate their impact on energy consumption, environment and the beneficial experience of interior and exterior spaces.
- **PSLO 2**: Identify and articulate issues related to the choice of various building, landscape and environmental systems; ideate responsive solutions; and compare the alternatives in making effective, sustainable decisions.
- Analyze and calculate energy use to make informed, environmentally-sound and economic choices to satisfy human needs for comfort and aesthetics.
- Explain the concepts of resource conservation and waste reduction and make sustainable design choices related to materials and construction.
- Develop a comprehensive understanding of green rating systems, livable communities strategies and the ability to apply these concepts in decision-making.
- **PSLO 3**: Demonstrate independent learning, teamwork and continuing education habits that will help to encourage a life long pursuit of knowledge.
- To use a teamwork process to identify issues, analyze criteria, research and apply learned principles to synthesize solutions to specific design projects.
- To demonstrate habits of visual note making and independent research by developing a sketch and notebook to record learning.

**Career Information**

This certificate helps to develop the knowledge base related to sustainable green buildings and environments for the careers of architecture, construction, construction management, building inspection, horticulture, landscape architecture and architectural design technology.
This certificate program utilizes CADD and Building Information Modeling (BIM) software to prepare students for careers in the area of Interior Building Architecture with an emphasis in Architectural Design.

Students who successfully complete the suggested program will be capable of performing pre-modeling (massing), modeling, and developing drawing documents normally expected of architects, designers and drafting technicians.

The program is designed to provide job market skills and opportunities within the Architectural Design disciplines and/or Construction Management as well as opportunities for students to qualify for employment in a variety of positions within the related industries. Additionally, this program offers opportunities for working professionals to take these courses for professional development to update and improve their skills in the interior building architecture field.

Note: It is highly recommended that each student keep a complete record of semester work/projects (i.e., a portfolio) to present for evaluation by employers.

This degree program utilizes various Building Information Modeling (BIM) software components, such as Revit MEP and Structure to prepare students for careers in Interior Building Architecture, Architecture, Building Information Modeling (BIM), with an emphasis in the Architectural Technology area.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- SLO #1: Research, evaluate and apply energy conservation, ergonomic considerations, American Disabilities Act (ADA), ecologically sustainable design solution and principles (Green Building/LEED) to design projects.
- SLO #2: Formulate, categorize and identify Green Building/LEED certified materials and systems for use in residential and commercial projects.
- SLO #3: Organize, categorize and illustrate the development of initial models into architectural design documents, individually or through work group methods.
- SLO #4: Demonstrate, summarize and recall visual and verbal note taking methods and apply the information into models and finalized residential and commercial project designs.
- SLO #5: Assess, compose and analyze architectural graphic information effectively to create solutions from a criteria matrix, bubble diagram and block diagramming methods.
- SLO #6: Choose, assemble and distinguish the necessary skills in developing marketable BIM/CADD skills for university transfer and the job market, through measurable methods in project development and presentations.

Career Information

Architectural Draftsperson, Designer/Technician, Planning Assistant, CADD Technician, BIM Technician, Facilities/Space Planner.
ADT 300 Architectural Sketching and Modeling I

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Specify specific tools and drawing conventions to complete standardized 'freehand' & 'manual' architectural drawings and sketches.
- Examine, formulate and select proper drawing equipment necessary to read architectural drawings requiring differing scale representation.
- Formulate, illustrate and apply how to draw and sketch with drawing instruments.
- Select and use appropriate types of drawing paper and supplies in the preparation of architectural drawings and sketches.
- Define, recognize and illustrate various line types used in architectural drawing and sketching.
- Define, recognize and illustrate various line weight sizes used in architectural drawings and sketches.
- SLO #2: Utilize the two types of freehand lettering styles utilized in Architectural drawings and sketches.
- Demonstrate and apply how to letter using the expanded style of architectural lettering.
- Demonstrate and illustrate the difference in straight and inclined architectural lettering styles formulated in the American National Standard Alphabet.
- SLO #3: Identify the hardware & software elements of a surface, parametric, modeler and Computer-Aided Drawing/Design CADD computer workstation.
- Identify and describe the different kinds of computer hardware/software components and their functions.
- Evaluate, investigate and select the appropriate computer software application for use in the development of either a 'surface', 'parametric', or computer-aided drawing model.
- SLO #4: Appraise, select and apply the various paraline pictorial drawings used in architectural drawings and sketches.
- Evaluate, formalize and apply the recommended steps in producing orthographic architectural drawings and sketches.
- SLO #5: Identify and diagram two architectural types of section drawings.
- Contrast, assemble and compare the fundamental differences and similarities among isometric and oblique drawings and sketches.
- Define, identify and apply how to develop floor plan drawings, sketches and symbols.
- Evaluate, collect and compare methods to provide architectural interior and exterior elevations.
- Categorize, create and appraise the need for producing an architectural auxiliary view.
- SLO #6: Illustrate the major elements required and used to illustrate plot, site and landscape plans.
- Define, express and illustrate how to develop architectural drawings & sketches for landscape plans, symbols, dimensions and legends with pencil and computer models.
- Define, identify and illustrate topographic drawing and sketching techniques in architectural plot and site plans utilizing pencil and computer models.
ADT 301 Introduction to Architectural Design Technology

Introduction to Architectural Design Technology (ADT) is a foundational course for students interested in a career within the Architecture, Engineering and Construction (AEC) industry. The course covers introductory skills needed for success in completing the ADT degree. Students will explore the role of the architectural / building technologist in the AEC industry and the current best practices for use of technology in building design and construction. Upon completion of this course, students will be able to identify potential roles for employment and will be able to utilize various tools and instruments to create freehand, technical and digital drawings required in industry. A completed portfolio of work will be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- WRITE AND SPEAK PROFESSIONALLY AND EFFECTIVELY – PROFESSIONAL COMMUNICATION SKILLS (SLO 1)
- Apply manual (sketching / drafting) and digital tools and techniques for the creation of professional documents for presentation such as sketching, drawing and modeling – professional communication skills (Objective 1A)
- COLLECT, ASSESS, RECORD, AND EVALUATE DATA IN ORDER TO SUPPORT CONCLUSIONS RELATED TO A PROJECT OR ASSIGNMENT – INVESTIGATIVE SKILLS (SLO 2)
- DEMONSTRATE EFFECTIVE USE BASIC FORMAL, ORGANIZATIONAL AND ENVIRONMENTAL PRINCIPLES TO INFORM TWO AND THREE-DIMENSIONAL DESIGN – ARCHITECTURAL DESIGN SKILLS (SLO 3)
- EXAMINE THE FUNDAMENTAL PRINCIPLES OF ARCHITECTURAL PRECEDENT AND USE IN THE DESIGN OF BUILDINGS AND URBAN DESIGN PROJECTS – USE OF PRECEDENTS (SLO 4)
- PREPARE A COMPREHENSIVE PROGRAM FOR AN ARCHITECTURAL PROJECT THAT INCLUDES ASSESSMENT OF CLIENT AND USER NEEDS, AN INVENTORY OF SPACES AND THEIR REQUIREMENTS, ANALYSIS OF SITE CONDITIONS, REVIEW OF RELEVANT BUILDING CODES AND STANDARDS, AND ASSESSMENT OF SUSTAINABILITY REQUIREMENTS – PRE DESIGN SKILLS (SLO 5)
- ANALYZE THE THEORETICAL AND APPLIED RESEARCH METHODS AND BEST PRACTICES USED DURING THE DESIGN PROCESS – RESEARCH (SLO 6)
- IDENTIFY THE KEY STAKEHOLDERS IN THE DESIGN PROCESS – CLIENT, CONTRACTOR, ARCHITECT, USER GROUPS, AND THE LOCAL COMMUNITY – STAKEHOLDER ROLES IN ARCHITECTURE (SLO 7)

ADT 302 Architectural Sketching and Modeling II

This course instructs students at an intermediate level of sketching, 3D digital design, Green Building-LEED® (Leadership in Energy and Environmental Design) principles in building design, Green Building-LEED® material certification, selection and application to models, 3D surface modeling and site development. The course is designed to facilitate further development to refining the student’s design and research skills by specifying, certifying, and applying Green Building-LEED® materials and design concept principles to structures, interior architectural elements, site selection and development. A software application such as SketchUp® will be utilized as the primary software to refine and further develop detail concepts and techniques in 3D-digital modeling.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Explain the basic elements and techniques of exterior, interior and environmental site design factors.
- Research, compare, and apply energy conservation, ergonomical considerations and ecological (Green Building/Sustainable) design materials, and solutions to exterior, interior spaces and site's through sketches and drawings.
- SLO #2: Utilize manual and digital design concepts in the development of the individual interior living spaces and elements.
Research, incorporate, and employ design considerations to develop environmental, location, architectural elements, size, and shape of exterior and interior materials of building spaces.

SLO #3: Utilize manual and digital design concepts in the development of exterior building space elements and materials.

Research, incorporate, and employ design considerations to develop environmentally pleasing entries, patios, cafeterias, entertaining areas, and aquatic areas.

Estimate, formulate, and illustrate how to calculate area and volume of living and aquatic spaces.

SLO #4: Articulate and translate the importance of calculating areas and traffic patterns for interior planning.

Evaluate, assemble, and calculate effectiveness of traffic patterns, plan hallways, calculate the correct space needed for stairways, guidelines for entrance, foyer and lobby design.

ADT 304 Office & Commercial Space Planning

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course instructs students at the basic to intermediate level in office, commercial and residential space planning, Title 24 and general building code requirements. Concepts covered will develop skills in space programming, criteria schematics and matrices, bubble diagrams, space planning and layout, building materials, code requirements and applications to the design model.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Articulate the various historical architectural styles through illustration methods.
- Research, formulate, and catalogue architectural styles ranging from the early Greek, Roman, Middle Ages, Renaissance, Baroque, Rococo, Neoclassic, 19th Century Revival Style to the Modern period.
- SLO #2: Utilize the techniques of planning and design with Human Factors in Design principles, Green Design and Sustainable Design concepts.
- Research, examine, and illustrate design fundamentals, communication techniques, and environmental considerations in spacial design.
- SLO #3: Appraise the importance of building code design standards, the Americans with Disabilities Act, building space constraints, and specification writing.
- Diagnose, setup, and demonstrate through drawings and sketches appropriate space designs utilizing the constraints of building codes, ADA requirements, and specification documentation.

ADT 310 Architectural Computer-Aided Drawing I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ADT 300 and 302
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the introductory study in Architectural Computer-Aided Drawing/Design with specific emphasis in the architectural field. Course subject areas will include but not be limited to identifying CADD components, working in the Windows environment, creating and saving files, entity geometry, editing features, MLine ‘Styles’, Layer convention properties, text/font ‘Styles’, layering creation, dimensioning and dimension ‘Styles’, Model and Paper Space environments, plotting, and Plot ‘Styles’. The subject content will cover the development of architectural floor plans, foundation plans & foundation ‘details’, electrical plans, subdivision plans and others drawings as they relate to the architectural field of study. Students will learn how to develop professional architectural drawing file documentation through the preparation and plotting (printing) presentation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Appraise the importance of basic digital drawing preparation and development.
- Assess, generate and define how to open/close a file, manage files, enter basic commands, create basic shapes, select objects, use basic Coordinate Geometry and secure/use the digital Help option.
- \( \text{SLO} \#2; \) Demonstrate how to properly use Editing and Viewing functions within CADD software.
- Compose, classify and compute the use of Object Snaps, Drawing tools, Construction Aids, Zooming and Panning functions within the CADD software.
- \( \text{SLO} \#3; \) Articulate the use of Drawing and Editing tools in drawing development.
- Assess, assemble and employ the use of Solid/Curved tools, Adding & Altering, Moving & Duplicating, Modifying & Maneuvering of objects.
- \( \text{SLO} \#4; \) Utilize the basic functions in the development of Dimensioning Styles and formats for Architectural Drawings.
- Appraise, build and demonstrate basic dimensioning style development and use application within drawings.
- \( \text{SLO} \#5; \) Utilize specific methods in Paper Space to develop proper plotting documents.
- Assemble, demonstrate and outline the proper methods for drawing setup, Layer and Line type assignments, view port development and plotting drawing to hard copy (paper).

---

**ADT 314 Architectural 3D Modeling**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** ADT 310 with a grade of “C” or better; Under special circumstances, such as prior outside experience, a student may take ADT 314 prior to taking ADT 312 but must obtain the instructor's permission. These courses are sequential prerequisites for this course.  
**Transferable:** CSU; UC  
**Catalog Date:** June 1, 2020

This course covers the introduction to 3-dimensional modeling and rendering for building structures and spatial analysis studies, Green Building/LEED® (Leadership in Energy and Environmental Design) material and guidelines application. Course subject areas will include shapes, splines, meshes, light, shadows, models, materials, scene creation, animations, and creating exterior and interior architectural and construction objects with software such as 3ds Max Design®.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- \( \text{SLO} \#1; \) Utilize shape and primitive elements in the development of conceptual 3D architectural models and rendered images.
- Assess, compose, and demonstrate the creation and use of creating and editing shapes, meshes for architectural models and renderings.
- Design, analyze, and employ how to utilize external design data in rendering.
- \( \text{SLO} \#2; \) Articulate through the development and use of element objects in 3D architectural models.
- Examine, formulate, and evaluate the appropriate use of internal and external light and shadow studies for building and topographical (toposurfaces) applications.
- \( \text{SLO} \#3; \) Articulate through the organization and management of architectural objects and scene creation.
- Define, identify, and apply how to create a new project using defined architectural elements.
- Define, identify, and develop scenes from architectural element objects.
- \( \text{SLO} \#4; \) Utilize interior and exterior models in the creation of rendered animations.
- Evaluate, analyze, and demonstrate the use and creation of animations with mental ray® using atmosphere, effects, and composition.

---

**ADT 320 Architectural Design Technology - Building Information Modeling (BIM) I**
This course instructs students in the beginning level of Building Information Modeling as it relates to parametric building modeling for architectural interiors and building space using software such as AutoDesk's Revit® Architecture. The content is a first level introduction course to data-generated Parametric Building Modeling for architectural design and drawing, also known as Building Information Modeling (BIM). Professionals in the design/construction field may have work and/or academic experience to waive any pre-requisites.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Explain the basis and orientation to the Building Information Management (BIM) technology.
- Organize, survey, and define the AutoDesk Revit® user interface screen.
- SLO #2: Utilize the element tools using basic building components and editing tools.
- Generate, analyze, and exhibit how to create elements such as walls, doors, windows, and surface materials within the parametric model.
- Appraise, manage, and convert existing elements by utilizing many of the editing tools within the parametric model.
- SLO 3#: Articulate how to work with datum's and create standard model views with the project browser.
- Choose, build, and develop standard concept levels for buildings, models and spaces.
- Choose, build, and develop standard architectural grids for the project files.
- Arrange, apply, and define transverse and longitudinal sections with work plane and reference plane tools.
- SLO #4: Utilize the intermediate building components in developing specific levels of space in a parametric model.
- Choose, manage, and apply specific locations and materials to floors, ceilings and creating roof types and material applications.
- SLO #5: Utilize the massing tool in developing initial/preliminary architectural exterior and spatial designs for review.
- Appraise, contrive, and examine through the use of the massing tool initial build/space designs before converting to building elements.
- Generate, analyze and exhibit how to use ‘Create-In-Place’ (CIP) tools.

**ADT 322 Architectural Design Technology - Building Information Modeling (BIM) II**

This course instructs students to the intermediate level of parametric modeling and management of architectural interiors and exteriors, building space management/design using software such as Autodesk's Revit®. The content is a second level course introduction to data-generated parametric building modeling "document drawing", also known as Building Information Management that surpasses pencil and CADD generated architectural drawings.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Explain the intermediate features of line weights and wall types applied to models.
- Build, categorize, and demonstrate how to create coarse, medium, and fine wall types.
- Build, categorize, and apply specific numerical line weight properties to models.
- SLO #2: Utilize the 16 intermediate editing tools available in the edit tool bar for modifying architectural models.
- Define, identify, and apply the various editing tools for modifying a parametric model.
SLO #3: Utilize the automated intermediate components in the development of architectural models.

Examine, formulate, and choose the various 'Automated' component tools available to create roofs, stairs, ceilings, wall systems, curtain walls and systems and railings.

SLO #4: Appraise the importance of applying site features to architectural models.

Define, express, and sketch topographic surface models, inserting site components for merging into architectural models.

SLO #5: Articulate through illustration the importance of creating animated 'renderings' and 'walk-throughs' for interior/exterior architectural models.

Compose, apply, and simulate through a realistic walk-through how interiors/exteriors will appear in a photo realistic appearance.

ADT 324 Architectural Design Technology - Building Information Modeling (BIM) III

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ADT 322 with a grade of "C" or better; or skills equivalent to ADT 322 with proficiency determined by the instructor.
Advisory: ADT 310 and 320; Students' knowledge and/or skills may be evaluated by the instructor on an individual basis, in lieu of the two Advisory Courses listed.
Transferable: CSU
Catalog Date: June 1, 2020

This course instructs students in the intermediate level of Building Information Modeling as it relates to parametric modeling and Green Building/LEED® (Leadership in Energy and Environmental Design) for 'Building Systems' drawing and design using software such as AutoDesk's Revit® MEP. The content is a first level introduction course of data-generated Parametric Building Modeling software for Mechanical, Electrical, and Plumbing systems; illustrating how the MEP (Mechanical-Electrical-Plumbing) software drawing designs integrate with Revit® Architecture and/or Revit® Structure.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Specify what Building Information Modeling (BIM) methodology means.
- SLO #2: Indicate the location of various tools from the ribbon tabs, and panels.
- SLO #3: Specify the recommended practices for working with Revit® 'elements' and 'families'.
- SLO #4: Assemble and demonstrate the necessary steps in using heating-cooling 'elements' and developing 'families'.
- SLO #5: Examine the practices for creating and working with ‘views’ and ‘view templates’.
- SLO #6: Assemble and produce the steps necessary in creating perspective ‘view’s and developing ‘view’ templates.
- SLO #7: Determine the best practices to create and modify 3D perspective and 2D orthographic views of a model.
- SLO #8: Examine, manipulate, and illustrate the steps to create 3D perspective and 2D orthographic views of heating-cooling views.
- SLO #9: Examine the process of shared projects using worksets, and import/edit AutoCAD drawing details into Revit®.
- SLO #10: Assemble, set-up, and formulate how to create Central and Local files for design team design.
- SLO #11: Examine the process of developing identity data and Heating Ventilating Air Conditioning system zones.
- SLO #12: Formulate, set-up and sketch the identity of elements, tags with data and creating HVAC zones.
- SLO #13: Demonstrate, summarize, and apply the steps in viewing analytical models and work with heating and cooling loads.
- SLO #14: Identify and diagram how to create, generate, and modify HVAC systems, layouts and ductwork.
- SLO #15: Diagram methods for creating fire, plumbing suppression and electrical system.
ADT 326 Architectural Design Technology - Building Information Modeling (BIM) IV

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1; Describe building information methodology.
- Identify and illustrate two written or verbal examples defining Building Information Modeling.
- SLO #2; Use the Revit® Structure user interface and work with different types of structural 'elements' and 'families'.
- Assemble and demonstrate the necessary steps in how to use structural 'elements' and developing 'families' from the user interface.
- SLO #3; Understand how to work with the Project Browser, how to control object visibility and graphical representation, and work the elevation, section, and 3D view.
- Evaluate, formulate, and illustrate the use of Visibility Graphics methods and Project Browser to modify various views within a project.
- SLO #4; Determine initial level and grid patterns of structural layouts.
- Evaluate, organize, and determine how to establish a project layout, transfer project standards, and work with levels and grids in a structural model.
- SLO #5; Specify specific tools and drawing conventions to establish structural building systems.
- Design, calculate, and apply methods to create structural columns and structural walls, create new wall types, and work with foundations, pilasters, and elevator pits.
- SLO #6; Specify specific tools to edit structural building systems.
- Resolve, examine, and employ methods for modifying beams and beam systems, add and edit structural steel moment and braced frames.
- SLO #7; Create slabs and roofs, and add structural framing to roofs for support.
- Assess, draft, and sketch methods to create overhead structural, and structural wall systems.
- SLO #8; Add foundations to a structural model.
- Diagnose, calculate, and employ drawing methods for the design of foundation floors, walls, and footer systems.
- SLO #9; Create structural stairs and various types of interior and exterior ramps to building structures.
- Diagnose, calculate, and employ drawing methods for design of structural stairs and ramps.
- SLO #10; Developing Annotation and Annotation standards in structural drawing views.
Appraise, create, and illustrate how to work with plan annotations using tags, dimensions, spot dimensions, and text as well as creating legends, annotation symbols, and schedules.

SLO #11; Illustrate how to Import and Export various 2D Revit® and AutoCad file formats in drawings and views.

Create and use detailing components and also import and use DWG™ details in your models.

SLO #12; Specify the methods for developing printed format in Revit® and AutoCad.

Recommend, formulate, and employ techniques for construction documentation, working with sheets and title-blocks, print a sheet set, and export Revit® Structure content to CAD™ formats.

ADT 495 Independent Studies in Architectural Design Technology

| Units:    | 1 - 3          |
| Hours:    | 54 - 162 hours LAB |
| Prerequisite: | None.         |
| Transferable: | CSU           |
| Catalog Date: | June 1, 2020  |

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

- Use information resources to gather discipline-specific information.

- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

- Explain the importance of the major discipline of study in the broader picture of society.

- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

ADT 498 Work Experience in Architecture Design Technology

| Units:    | 1 - 4          |
| Hours:    | 60 - 300 hours LAB |
| Prerequisite: | None.         |
| Enrollment Limitation: | Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Architecture Design Technology. |
| Transferable: | CSU           |
| General Education: | AA/AS Area III(b) |
| Catalog Date: | June 1, 2020  |
This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED TO ONE'S CAREER.**

- Understand the effects time, stress, and organizational management have on performance.

- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.

- Examine the career/life planning process and relate its relevancy to the student.

- Demonstrate an understanding of basic communication tools and their appropriate use.

- Demonstrate an understanding of workplace etiquette.

- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.**

- Link personal goals to long term achievement.

- Display an understanding of creating a professional first impression.

- Understand how networking is a powerful job search tool.

- Understand necessary elements of a résumé.

- Understand the importance of interview preparation.

- Identify how continual learning increases career success.

- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.**
Architecture | Cosumnes River College

This program offers students study and job-related experience in architectural drafting, construction techniques, design, rendering, and energy systems as well as opportunities to develop skills necessary for employment in the professional field of architecture. Transfer programs are articulated with California State Polytechnic University at San Luis Obispo, the University of California at Berkeley, and New School of Architecture and Design.

Dean

 (916) 691-4300

 HarrisC2@crc.losrios.edu (mailto:HarrisC2@crc.losrios.edu)

Associate Degree

A.S. in Architecture

The objective of this program is to develop design and job-related skills necessary for entry into the professional field of architecture. The curriculum focuses on development of critical thinking and problem solving abilities as a means to creative thinking. College preparation for a career in architecture spans several disciplines and includes the development of knowledge and competencies in areas such as: architectural history and design; visual communication and drawing; computer modeling and rendering; construction methods and materials; energy systems and an understanding of human needs and sociology as they relate to the built environment.

HIGHLIGHTS
* Participation in architecturally-related events such as the Design Village Competition at Cal Poly San Luis Obispo.
* Field trips to a variety of architectural sites for study and appreciation of the built environment.
* Special studies in environmental sustainability and energy conscious design.
* Liaison with professional organizations such as the American Institute of Architects (AIA) and the Construction Specification Institute (CSI).

The Architecture Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO #1: Have the necessary technical knowledge and reasoning skills to identify, articulate, record information, assess evidence, investigate precedents and solve problems pertaining to the built environment and perform the tasks required within the architecture and environmental design professions. This includes the ability to use basic formal organizational and environmental principles; build abstract relationships to inform two and three-dimensional design; and understand the impact of ideas based on research, analysis of multiple theoretical, social, political, economic, cultural and environmental contexts.

- PSLO #2: Have the necessary communication skills, using a diverse range of techniques and media to think about and convey architectural ideas including writing, analytical and envisioning drawing, speaking to peers and groups; computer modeling and physical model-making.

- PSLO #3: Be able to comprehend the technical aspects of design, systems, sustainability, constructability, and materials, and be able to apply this comprehension to architectural solutions. This includes: 1. Site Design: Ability to respond to site determinants such as context and planning issues in the development of a project design. 2. Life Safety: Ability to apply basic principles of life-safety systems and exiting. 3. Environmental Systems: Understanding the principles of environmental control systems and sustainable design. 4. Structural Systems: Understanding the basic principles of structural behavior in withstanding gravity and lateral loads and the appropriate structural alternatives. 5. Building Envelope Systems: Understanding of the basic principles of building materials and characteristics in the appropriate selection relative to performance, aesthetics, moisture control, energy and durability.

- PSLO #4: Have the values of ethics and understanding of historical, cultural, human, aesthetic, environmental, public health and social issues to be able to affect creative change. This includes understanding the diverse needs, values, behavioral norms, physical abilities, social and spatial patterns that characterize different cultures and individuals.

- PSLO #5: Be able to work effectively as a team member or as an individual.

- PSLO #6: Have the professional attitude and desire for life-long learning. This includes developing habits of research, precedent, and independent learning.

Career Information

Architecture; Building Information Modeler; Inspection; Planning; Construction Administration. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

Certificates of Achievement

Architectural Technology Certificate

The objective of this certificate is to develop design and job-related skills necessary for entry into the professional field of architecture. The curriculum focuses on development of critical thinking and problem solving abilities as a means to creative thinking. College preparation for a career in architecture spans several disciplines and includes the development of knowledge and competencies in areas such as: architectural design; visual communication and drawing; computer modeling and rendering; construction methods and materials; energy systems and an understanding of human needs and sociology as they relate to the built environment.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO #1: Have the necessary technical knowledge and reasoning skills to identify, articulate, record information, assess evidence, investigate precedents and solve problems pertaining to the built environment and perform the tasks required within the architecture and environmental design professions. This includes the ability to use basic formal organizational and environmental principles; build abstract relationships to inform two and three-dimensional design; and understand the impact of ideas based on research, analysis of multiple theoretical, social, political, economic, cultural and environmental contexts.

- PSLO #2: Have the necessary communication skills, using a diverse range of techniques and media to think about and convey architectural ideas including writing; analytical and envisioning drawing; speaking to peers and groups; computer modeling and physical model-making.

- PSLO #3: Be able to comprehend the technical aspects of design, systems, sustainability, constructability, and materials, and be able to apply this comprehension to architectural solutions. This includes: 1. Site Design: Ability to respond to site determinants such as context and planning issues in the development of a project design. 2. Life Safety: Ability to apply basic principles of life-safety systems and exiting. 3. Environmental Systems: Understanding the principles of environmental control systems and sustainable design. 4. Structural Systems: Understanding the basic principles of structural behavior in withstanding gravity and lateral loads and the appropriate structural alternatives. 5. Building Envelope Systems: Understanding of the basic principles of building materials and characteristics in the appropriate selection relative to performance, aesthetics, moisture control, energy and durability.

- PSLO #4: Have the values of ethics and understanding of historical, cultural, human, aesthetic, environmental, public health and social issues to be able to affect creative change. This includes understanding the diverse needs, values, behavioral norms, physical abilities, social and spatial patterns that characterize different cultures and individuals.

- PSLO #5: Be able to work effectively as a team member or as an individual.

- PSLO #6: Have the professional attitude and desire for life-long learning. This includes developing habits of research, precedent, and independent learning.

Career Information

Architecture; Building Information Modeler; Inspection; Planning; Construction Administration. Some career options may require more than an Architectural Technology certificate. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

Green Buildings Certificate

The purpose of this certificate is to develop job skills and an understanding of green strategies for high performance buildings and livable communities. It is focused at students and professionals in the fields of architecture; construction; building management; construction management; building inspection; design technology; landscape; and planning, who want to acquire a comprehensive knowledge of an integrated, economic life-cycle approach to the design of the built environment. It includes study of green rating systems, material choices and environmental strategies for a livable, sustainable future.

**Catalog Date:** June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO 1: Establish meaningful ethical, social and environmental objectives for buildings and communities based on the values of energy and resource conscious design.
- Compare and contrast societal and economic implications of utilizing renewable and non-renewable energy sources.
- Compare and contrast the effect of contextual issues and evaluate their impact on energy consumption, environment and the beneficial experience of interior and exterior spaces.
- PSLO 2: Identify and articulate issues related to the choice of various building, landscape and environmental systems; ideate responsive solutions; and compare the alternatives in making effective, sustainable decisions.
- Analyze and calculate energy use to make informed, environmentally-sound and economic choices to satisfy human needs for comfort and aesthetics.
- Explain the concepts of resource conservation and waste reduction and make sustainable design choices related to materials and construction.
- Develop a comprehensive understanding of green rating systems, livable communities strategies and the ability to apply these concepts in decision-making.
- PSLO 3: Demonstrate independent learning, teamwork and continuing education habits that will help to encourage a life long pursuit of knowledge.
- To use a team work process to identify issues, analyze criteria, research and apply learned principles to synthesize solutions to specific design projects.
- To demonstrate habits of visual note making and independent research by developing a sketch and notebook to record learning.

Career Information

This certificate helps to develop the knowledge base related to sustainable green buildings and environments for the careers of architecture, construction, construction management, building inspection, horticulture, landscape architecture and architectural design technology.
Architecture (ARCH)

ARCH 300 Introduction to Design Professions

Units: 2  
Hours: 36 hours LEC  
Prerequisite: None.  
Transferable: CSU; UC  
Catalog Date: June 1, 2020

This course is a comprehensive study of the professions related to the built environment including architecture, landscape architecture, construction management, construction, city and urban planning, interior design, building inspection, environmental and energy planning. Guest speakers from various design and construction professions will engage students in discussions related to their professional practice and the necessary preparation in education and experience. Each student will evaluate his/her interest and potential of success in the areas of his/her choice. The course will include an overview of architectural history, an introduction to some of the major architects and class discussion of current issues in the environmental design professions. Additional topics in the class will include: transfer, licensing requirements and environmental design vocabulary.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO-1: Demonstrate basic abilities at using problem solving and design process methodologies to identify problems, analyze criteria and apply learned principles to synthesize solutions to specific design projects.
- SLO-2: Evaluate and reflect on the success of the process and the solution for a specific design project.
- SLO-3: Utilize skill associated with representing ideas and thinking visually, orally and by writing.
- SLO-4: Identify needs and assume diverse roles that maximize individual talents and to cooperate with other students, when working as a team, to maximize accomplishment.
- SLO-5: Show ability at active participation and contribution both as an individual and in team efforts.
- SLO-6: Demonstrate ability at research, investigation and the skills associated with life-long learning.
- SLO-7: Utilize comprehensive and graphic visual note-making in sketch books for recording of thoughts, observations, design thinking, and to enhance the desire for research, independent learning and continuing education as a life-long pursuit.
- SLO-8: Identify, assess and reflect on the values of historical, cultural, human, aesthetic, environmental and social issues in effecting creative change to the built environment.
- SLO-9: Identify, assess and reflect on the issues related to choosing an environmental design profession and determine for themselves their interest, placement and occupational pursuit.
- SLO-10: Recognize the differences in the various environmental design professions and apply learned information and principles to make rational and fulfilling education and career decisions.
- SLO-11: Outline the requirements for matriculation to CRC transfer schools in order to gain acceptance.
- SLO-12: Describe the workplace requirements of the environmental design professions for successful completion of career goals.

ARCH 310 History of Architecture

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligibility for ENGWR 101  
Transferable: CSU; UC  
General Education: AA/AS Area I; CSU Area C1  
Catalog Date: June 1, 2020

This course studies the architecture design theories and practices of the late 19th and 20th century to the present including the Beaux Arts, Art Nouveau, Expressionism, De Stijl international style, Fascist Ideologies, Regionism, Post World War II Amalgamations of Twentieth Century idioms and recent reactions to contemporary standardization.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **SLO-1:** Understand and demonstrate how historical issues have been able to influence and affect creative change and evolution in the character of the built environment.

- **SLO-2:** Identify, understand and demonstrate the relationship of development of the built environment to changes in fine art, technological development, structural innovation, cultural influences, aesthetic concepts, sociological psychology, architectural theory, context, resources, environment, etc.

- To identify buildings that have been significant milestones in the evolution of the built environment, place them in their historical timeframe, identify what is the architectural and historical significance of the building.

- **SLO-3:** Demonstrate ability to identify and assume diverse roles that maximize individual talents and to cooperate with other students, when working as a team, to maximize accomplishment.

- To demonstrate ability at active participation and contribution both as an individual and in team efforts.

- **SLO-4:** To demonstrate ability at research, investigation and the skills associated with life-long learning.

- To demonstrate ability to use comprehensive and graphic visual note-making in sketch books for recording of thoughts, observations, design thinking, and to enhance the desire for research, independent learning and continuing education as a life-long pursuit.

### ARCH 320 Architectural Design and Communication I

**Units:** 3.5  
**Hours:** 54 hours LEC; 27 hours LAB  
**Prerequisite:** None.  
**Corequisite:** ARCH 325  
**Transferable:** CSU; UC  
**Catalog Date:** June 1, 2020

This course is an introduction to the concepts and processes associated with two and three-dimensional design. A series of design projects are used to discover principles and concepts of design while simultaneously addressing the skills associated with representing envisioned ideas, objects and environments. This includes the development of freehand sketching, manual drafting and graphic skills for communication of analysis and design concepts. Students should previously or concurrently enroll in ARCH 325 to learn methods for digital construction of design and drawing projects assigned in ARCH 320.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO-1:** Apply basic organizational and spatial principles in the conception and development of architectural environments.

- Utilize problem solving and design process methodologies to identify problems, analyze criteria and apply learned principles to synthesize solutions to specific design projects; to assess and reflect on the success of the process and solution.

- Use the fundamentals of visual perception and the principles of order (unity, balance, pattern, hierarchy, etc.) to create relationships between elements.

- Demonstrate understanding and ability at using a range of architectural design concepts including the sequential experiences of approach, entry, arrival, open/implied versus closed/explicit space, clear spatial figure, etc.

- **SLO-2:** Understand and utilize the skills associated with representing envisioned ideas, objects and environments.

- Employ appropriate drawing and representational media, including computer and duplication technology, to convey essential formal elements at each stage of the programming and design process.

- Understand and apply information gathered by the human visual system to support the perception of form and space (spatial cues as well as the graphic language of texture, value, line weight etc).

- Define the role of different types of drawing in the communication of design ideas at the various stages of a project and to be able to use the primary drawing systems of orthographics, para-line and perspective to represent those ideas.

- Utilize a range of drawing types from quick freehand gestures to carefully constructed representations to represent existing and imagined objects or environments on two-dimensional surfaces.

- Create the context of figures, landscape, and furnishings into various drawing systems with appropriate scale to enhance the representation of depth.

- Produce hand lettering using a range of media (i.e. pencil, pen, and marker) that exhibits good letter form, consistency, alignment and shape.

- **SLO-3:** Identify and assume diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.
Demonstrate ability at active participation and contribution to a team effort.

SLO-4: Demonstrate ability at research, investigation and the skills associated with life-long learning.

Use comprehensive and graphic visual note-making in sketch books for recording of thoughts, observations, design thinking and to enhance the desire for research, independent learning and continuing education as a life-long pursuit.

ARCH 321 Architectural Design and Communication II

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO-1: Apply basic organizational and spatial principles to the conception and development of architectural environments.
- SLO-2: Understand and utilize the skills associated with representing envisioned ideas, objects and environments.
- SLO-3: Identify and assume diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.
- SLO-4: To demonstrate ability at research, investigation and the skills associated with life-long learning.

This course is a continuation and development of the content and issues introduced in ARCH 320 plus the principles, concepts, methods and skills pertaining to the construction of shadows and reflections, physical model building, entourage and color theory. A series of design projects are used to discover principles and concepts of design while simultaneously addressing the skills associated with representing envisioned ideas, objects and environments. This includes the development of physical model making, freehand sketching, manual drafting and graphic skills for communication of analysis and design concepts. Students should previously or concurrently enroll in ARCH 326 to learn methods for digital construction of design and drawing projects assigned in ARCH 321.

ús: 3.5
Hours: 54 hours LEC; 27 hours LAB
Prerequisite: None.
Corequisite: ARCH 326
Advisory: It is advisable that students enrolling in this course should have completed Arch 320 and 325 or a computer modeling course, in order to have abilities at computer modeling and to understand basic drawing types of orthographic, paraline and perspective.
Transferable: CSU; UC
Catalog Date: June 1, 2020

3.5
Units:
54 hours LEC; 27 hours LAB

Students should previously or concurrently enroll in ARCH 326 to learn methods for digital construction of design and drawing projects assigned in ARCH 321.

Upon completion of this course, the student will be able to:

- SLO-1: Apply basic organizational and spatial principles to the conception and development of architectural environments.
- SLO-2: Understand and utilize the skills associated with representing envisioned ideas, objects and environments.
- SLO-3: Identify and assume diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.
- SLO-4: To demonstrate ability at research, investigation and the skills associated with life-long learning.
This course is a continuation and development of the content and issues introduced in ARCH 320 and 321 plus the issues, concepts, processes and skills pertaining to the analysis and design of architectural form, space and organizations. A series of design projects are used to discover principles and concepts of design while simultaneously addressing the skills associated with representing envisioned ideas, objects and environments. This includes the development of freehand sketching, computer modeling, architectural delineation and graphic skills for communication of analysis and design concepts.

Upon completion of this course, the student will be able to:

- SLO-1: Apply basic organizational and spatial principles to the conception and development of architectural environments.
- Utilize problem solving and design process methodologies to identify problems, analyze criteria and apply learned principles to synthesize solutions to specific design projects; to assess and reflect on the success of the process and solution. Students should be able to analyze issues related to image, function and context in order to develop appropriate conceptual responses.
- Use the fundamentals of visual perception and the principles of order (unity, balance, pattern, hierarchy, etc,) to create relationships between elements.
- Analyze the work of precedent architects to understand the formal techniques of expressing philosophy and meaning. Demonstrate understanding and ability at using a range of learned architectural design concepts and geometry including the sequential experiences of approach, entry, arrival, continuum, open/implied versus closed/explicit space, clear spatial figure, etc. to respond to discovered issues related to context, image and function.
- SLO-2: Understand and utilize the skills associated with representing envisioned ideas, objects and environments.
- Employ appropriate drawing and representational media, including computer and duplication technology, to convey essential formal elements at each stage of the programming and design process.
- Understand and apply information gathered by the human visual system to support the perception of form and space (spatial cues as well as the graphic language of color, texture, light, shade, shadow, reflectivity, line weight etc).
- Define the role of different drawing and model types in the communication of design ideas at the various stages of a project and to be able to use the primary drawing systems of orthographics, para-line and perspective.
- Utilize a range of drawing types from quick freehand gestures to carefully constructed and rendered delineations to represent existing and imagined objects or environments on two-dimensional surfaces.
- Create the context of figures, landscape, and furnishings into various drawing systems with appropriate scale to enhance the representation of depth.
- Produce hand lettering using a range of media (i.e. pencil, pen, and marker) that exhibits good letter form, consistency, alignment and shape.
- SLO-3: Identify and assume diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.
- Demonstrate ability at active participation and contribution to a team effort.
- SLO-4: Demonstrate ability at research, investigation and the skills associated with life-long learning.
- Use comprehensive and graphic visual note-making in sketch books for recording of thoughts, observations, design thinking and to enhance the desire for research, independent learning and continuing education as a life-long pursuit.
This is a studio course to explore principles, concepts, methods and skills pertaining to the digital construction of drawings employing orthographic, axonometric, oblique, and lineal perspective drawing systems to represent ideas, objects and environments.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO-1: Demonstrate technical knowledge of a range of digital media and techniques that can be employed in drawing and other visual communications.
- Create a range of two-dimensional reproduction techniques (i.e. prints, photocopies, statistics, scans, etc.).
- Use a range of presentation methods including computer images.
- Use a range of computer hardware components and software applications and understand the function and relationship of the major hardware components of a typical stand-alone computer system; explain the relationship between the hardware and software of computer systems; describe the function and relationship of operation systems, shell applications and special purpose applications.
- SLO-2: Utilize problem solving methodologies to identify problems and issues, to apply learned principles to synthesize solutions to specific 2d and 3d design problems assigned in Arch 320 and to assess and reflect on the success of the process and solution.
- SLO-3: Demonstrate ability at research, investigation and the skills associated with life-long learning.
- Use comprehensive and graphic visual note-making in sketch books for recording of thoughts, observations, design thinking and to enhance the desire for research, independent learning and continuing education as a life-long pursuit.

ARCH 326 Architectural Digital Design and Communication II

This course is a continuation and development of the content and issues introduced in ARCH 325, plus the principles, concepts, methods and skills pertaining to the digital construction of shadows, digital and physical model building, entourage and color theory.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO-1: Demonstrate technical knowledge of a range of digital media and techniques that can be employed in drawing and other visual communications.
- create a range of two-dimensional reproduction techniques (i.e. prints, photocopies, statistics, scans, etc.).
- use a range of presentation methods including computer images.
- use a range of computer hardware components and software applications to understand the function and relationship of the major hardware components of a typical stand-alone computer system.
- explain the relationship between the hardware and software of computer systems.
- describe the function and relationship of operation systems, shell applications and special purpose applications.
- SLO-2: Demonstrate ability at using problem solving methodologies to identify problems and issues to apply learned principles to synthesize solutions to specific 2d and 3d design problems.
- assess and reflect on the success of the process to synthesize solutions to specific 2d and 3d design problems.
- SLO-3: To demonstrate ability at research, investigation and the skills associated with life-long learning.
demonstrate ability to use comprehensive and graphic visual note-making in sketch books for recording of thoughts and observations for design thinking.

ARCH 329 Architectural Working Drawings

This course provides an introduction to residential design and construction documents. Students will design a residence and produce a complete set of architectural working drawings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO-1: Demonstrate ability to apply basic organizational and spatial principles to the conception and development of architectural environments for a residential design project.
- SLO-2: Demonstrate basic abilities at using problem solving and design process methodologies to identify problems, analyze criteria and apply learned principles to synthesize solutions to a specific residential design project; to assess and reflect on the success of the process and solution. Students should be able to analyze issues related to image, function and context in order to develop appropriate design and detail responses.
- SLO-3: Demonstrate and apply the skills associated with representing envisioned ideas, objects and environments.
- SLO-4: Employ appropriate drawing and representational media, including computer, manual drafting and duplication technology, to convey concepts and ideas at each stage of the project delivery process including programming, design and construction documents.
- SLO-5: Demonstrate ability to communicate architectural information on construction documents with the use of line-work, manual and digital lettering, symbols and drafting conventions.
- SLO-6: Identify and explain light frame construction including techniques, materials, systems and apply learned principles to create the drawings that control the construction of a building.
- SLO-7: Explain the basic technical elements of wood frame construction including layout; structural, mechanical and electrical sizing; framing techniques; detailing and apply learned principles to create the drawings that control building development.
- SLO-8: Describe and design site planning, grading, drainage and site systems and apply learned principles to create the drawings that control site development.
- SLO-9: Describe and design the primary building systems including structure, mechanical, electrical, weatherproofing, etc., that are integrated into a building and apply learned principles to create the drawings that control building development.
- SLO-10: Organize a set of documents including cross-referencing, code review, checklists, coordination, cartooning and other planning methods to create the documents that control building development.
- SLO-11: Identify and assume diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.
- SLO-12: Demonstrate active participation and contribution to a team effort as well as individual effort.
- SLO-13: Apply research, investigation and the skills associated with life-long learning.
- SLO-14: Demonstrate the use of comprehensive and graphic visual note-making in sketch books for recording of thoughts, observations, and design thinking to enhance research and independent learning within continuing education as a life-long pursuit.

ARCH 330 Design Fundamentals

This course is designed for students who have completed a Building Information Modeling (BIM) course or have completed Arch 321 and Arch 326. Students should be able to analyze issues related to image, function and context in order to develop appropriate design and detail responses.
This course develops an understanding of design fundamentals in terms of materiality and the theories, concepts, creative problem solving processes, and skills pertaining to the analysis and design of architectural form, space and organizations to communicate intended concepts and meanings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO-1: Apply basic organizational and spatial principles to the conception and development of architectural environments.
- use problem solving and design process methodologies to identify problems, analyze criteria and apply learned principles to synthesize solutions to specific design projects.
- assess and reflect on the success of the process and solution within the design methodologies.
- use organization systems, spatial geometry and principles of order (unity, balance, pattern, hierarchy, rhythm, etc,) to create meaning and relationships between elements.
- identify and use a range of architectural design concepts, including the sequential experiences of approach, entry, arrival, continuum, open/implied versus closed/explicit space, and clear spatial figure, etc., to respond to discovered issues related to context, image and function.
- observe and analyze existing conditions, context, function and image, as well as define goals and issues to generate concepts that provide abstract meaning into architectural form and spaces.
- SLO-2: Comprehend and demonstrate the 2d and 3d skills associated with representing envisioned ideas, objects and environments.
- employ appropriate representational media including study and presentation models, freehand and conceptual drawing.
- compose analytical drawing and diagramming to convey visualize ideas and convey essential formal elements at each stage of the programming and design process.
- SLO-3: Demonstrate teamwork skills within active participation and contribution to a team effort.
- identify and employ diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.
- SLO-4: Demonstrate knowledge an understanding of historical, cultural, human, aesthetic, environmental and social issues to be able to affect creative change in the built environment.
- SLO-5: Demonstrate skills in research and investigation associated with architectural design and life-long learning.
- Sketch and use comprehensive and graphic visual note-making in sketch books for recording thoughts and observations for design thinking and to express the desire for research, independent learning and continuing education as a life-long pursuit.
- SLO-6: Demonstrate oral communication skills that are appropriate and effective within group discussion and oral presentation that pertains to design thinking.

ARCH 332 Design Awareness

This course examines design problems and the environment by providing theories, concepts, processes, studies and skills pertaining to space, form, structure, context, materials, climate, livability and sustainability. The course covers sustainability as a determinant that shapes and impacts the built environment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO-1: Demonstrate ability to apply basic organizational and spatial principles to the conception and development of architectural environments.
- Use problem solving and design process methodologies to identify problems, analyze criteria and apply learned principles to synthesize solutions to specific design projects.
ARCH 334 Advanced Design in Three Dimensions

**Units:** 3  
**Hours:** 54 hours LEC; 18 hours LAB  
**Prerequisite:** ARCH 332 with a grade of "C" or better  
**Advisory:** ARCH 320 and 330  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is a continuation of the content in ARCH 332 that emphasizes design process, with a focus on advanced design in terms of three dimensional design and design problems pertaining to the environment. The course studies the theories, concepts, processes and skills pertaining to space, form, structure, context, structure, materials, climate, and livability, as well as sustainability as determinants that shape and impact the built environment.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO-1:** Apply basic organizational and spatial principles to the conception and development of architectural environments.
- **SLO-2:** Use problem solving and design process methodologies to identify problems, analyze criteria and apply learned principles to synthesize solutions to specific design projects at an advanced level.
- **SLO-3:** Assess and reflect on the success of the process and solution within the design methodologies.
- **SLO-4:** Demonstrate understanding and the ability to use organization systems, spatial geometry and principles of order (unity, balance, pattern, hierarchy, rhythm, etc.) to create meaning and relationships between elements.
- **SLO-5:** Demonstrate understanding and ability at using a range of architectural design concepts including the sequential experiences of approach, entry, arrival, continuum, open/implied versus closed/explicit space, clear spatial figure, etc., in order to respond to discovered issues related to context, image and function.
- **SLO-6:** Observe and analyze existing conditions, context, function and image, as well as define goals and issues to generate concepts that provide abstract meaning into architectural form and spaces.
- **SLO-7:** Comprehend and demonstrate the 2d and 3d skills associated with representing envisioned ideas, objects and environments.
- **SLO-8:** Employ appropriate representational media including study and presentation models, freehand and conceptual drawing.
- **SLO-9:** Compose analytical drawing and diagramming to convey visualize ideas and convey essential formal elements at each stage of the programming and design process.
- **SLO-10:** Demonstrate teamwork skills within active participation and contribution to a team effort.
- **SLO-11:** Identify and employ diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.
- **SLO-12:** Demonstrate knowledge and understanding of historical, cultural, human, aesthetic, environmental and social issues to be able to affect creative change in the built environment.
- **SLO-13:** Demonstrate an understanding of sustainable environmental design by applying learned principles to create energy and resource conscious, climate-adapted architectural and environmental design.
- **SLO-14:** Demonstrate an awareness of sociological, cultural and urban planning issues by applying learned principles to create livable communities and architecture that support ecological, pedestrian and human environments.
- **SLO-15:** Demonstrate skills in research and investigation associated with architectural design and life-long learning.
- **SLO-16:** Sketch and use comprehensive and graphic visual note-making in sketch books for recording thoughts and observations for design thinking and to express the desire for research, independent learning and continuing education as a life-long pursuit.
- **SLO-17:** Demonstrate oral communication skills that are appropriate and effective within group discussion and oral presentation that pertains to design thinking.
• Observe and analyze existing conditions, context, function and image, as well as define goals and issues to generate concepts that provide abstract meaning into architectural form and spaces.

• SLO-2: Understand and demonstrate the 2d and 3d skills associated with representing envisioned ideas, objects and environments.

• Employ appropriate representational media including study and presentation models, freehand and conceptual drawing.

• Compose advanced, analytical drawing and diagramming to convey visualize ideas and convey essential formal elements at each stage of the programming and design process.

• SLO-3: Demonstrate teamwork skills within active participation and contribution to a team effort.

• Identify and employ diverse roles that maximize individual talents and to cooperate with other students, when working as members of a team, to maximize accomplishment.

• SLO-4: Demonstrate knowledge an understanding of historical, cultural, human, aesthetic, environmental and social issues to be able to affect creative change in the built environment.

• Demonstrate an understanding of sustainable environmental design by applying learned principles to create energy and resource conscious, climate-adapted architectural and environmental design.

• Demonstrate an awareness of sociological, cultural and urban planning issues by applying learned principles to create livable communities and architecture that support ecological, pedestrian and human environments.

• SLO-5: Demonstrate advanced skills in research and investigation associated with architectural design and life-long learning.

• Sketch and use comprehensive and graphic visual note-making in sketch books for recording thoughts and observations for advanced design thinking and to express the desire for research, independent learning and continuing education as a life-long pursuit.

• SLO-6: Demonstrate oral communication skills that are appropriate and effective within group discussion and oral presentation that pertains to design thinking.

This course is the study of theory and application of climate, energy use and thermal comfort as determinants of architectural form in envelope load dominated buildings. Emphasis is placed on sustainable architectural methods and topics related to resource conservation and waste reduction; site analysis; sun access; sun shading; daylighting; lighting, ventilating, cooling and heating for envelope-load dominated buildings; and sound in buildings. The course enhances students’ knowledge base and preparation for design classes ARCH 332 and ARCH 334.

This course replaces the ARCH 340 and 341 two-course sequence, and is therefore not open to a student that has received credit for both ARCH 340 and 341.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO 1: Make reasonable architectural decisions based on the ethical, social, and environmental value of energy conscious design.

• Compare and contrast societal implications of utilizing non-renewable and renewable energy sources.

• Express how the relationship between building form, scale and location affects a building's successful response to the environment.

• Compare and contrast the effect of orientation and other contextual issues to evaluate their impact on energy consumption and beneficial experience of spaces.

• SLO 2: Identify and compare issues and alternatives related to the choice of various building systems; ideate and apply responsive solutions by integrating knowledge of climate, site, materials and assemblies as drivers of design.

• Understand the tools of performance assessment to analyze and calculate energy use so as to make informed choices to satisfy human needs for comfort and aesthetic.

• Analyze the context of buildings, evaluate needs and make informed choices that respond, in a sustainable way, to solar geometry, sun access, daylighting, shading, and photovoltaic systems.
- Describe the physics of light, including the luminous environment as architectural form-givers, and apply learned principles to the selection and design of electrical systems.
- Understand and demonstrate the concepts of waste reduction, water and resource conservation; calculate embodied energy and waste contribution; and make sustainable design choices related to materials and construction.
- Understand the physics of sound, analyze requirements, calculate criteria and apply learned principles to the selection of walls, floors and ceilings for noise isolation or sound enhancement.
- Understand the concepts of human thermal comfort and performance; heat transfer; building materials, assemblies and systems; climate analysis, vernacular architecture and climate responsive architectural design; and be able to apply learned principles to analyze the context of buildings and climate, evaluate needs and synthesize informed, calculated choices that respond, in a sustainable way, to create thermal comfort.
- Describe strategies for passive heating and cooling and be able to apply learned principles to reduce energy consumption and provide thermal comfort for various climates including: hot arid, hot humid, cold and temperate.
- Describe and apply the principles of psychrometrics to provide thermal comfort.
- Describe the various types of mechanical systems for heating and cooling buildings and be able to apply learned principles to propose responsive schematic design.
- SLO 3: Demonstrate independent learning, knowledge of teamwork principles and continuing education habits that will encourage a lifelong pursuit of knowledge, including the ability to gather, assess, record and comparatively evaluate relevant information.
- Use a teamwork process to identify issues, analyze criteria, research and apply learned principles to synthesize solutions to a specific design project.
- Demonstrate habits of visual note making and independent learning by developing a sketch and notebook to record learning and process for generating ideas.

ARCH 495 Independent Studies in Architecture

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

ARCH 498 Work Experience in Architecture

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Architecture.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE'S CAREER.**
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.

- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.**
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.

- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.**

CRC's art curriculum offers introductory and intermediate level courses in painting, figure drawing, digital art, drawing, sculpture, ceramics, printmaking and design, as well as courses in art appreciation and art history. Through the program's art theory and art practice classes, students develop an awareness and understanding of the materials, tools, rationale and significance of art in society. The art curriculum's critical thinking and technical skills components encourage students to utilize independent thought processes and problem solving.

Associate Degrees for Transfer

A.A.-T. in Art History

The Associate in Arts in Art History for Transfer Degree (AA-T) is designed to provide a seamless transfer pathway for students interested in pursuing at least one Art History degree option in the California State University (CSU) system. The degree is comprised of lower division coursework typically required by CSU institutions. Students must complete a total of 60 transferable semester units with a minimum 2.0 GPA, to include either the California State University General Education Breadth pattern or the Intersegmental General Education Transfer Curriculum; students must also earn a grade of C or better in all the courses for the major as described in the Required Program. Upon successful completion of the degree requirements, students will be guaranteed admission to the CSU system with junior status and will not have to repeat lower division coursework. Students are encouraged to meet with a counselor to develop their educational plans as degree options and general education requirements vary for each university.

Catalog Date: June 1, 2020

Total Units: 21

The Associate in Arts in Art History for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- assess and evaluate the contributions of artists throughout history and analyze art and architecture within the context of their functions and meanings (SLO #1).
- discuss works of art publicly (SLO #2).
- identify and evaluate works of art or architecture according to their appropriate style, region, and time frame (SLO #3).
- research and assess theoretical information concerning the meanings and purposes of art and architecture, use scholarly sources, and express thoughts clearly in writing (SLO #4).
- develop an appreciation for the arts, cultural practices, and history of people of the past and demonstrate how art and architecture is a reflection of that history (SLO #5).

Career Information

The AA-T in Art History can provide students with the foundational knowledge necessary for transfer to a 4-year Bachelor of Arts (BA) degree program. Career opportunities for students who have earned BA degrees in Art History include but are not limited to: registrars, preparators, and curatorial staff in art museums and galleries; art critics in mass media publications, such as newspapers and magazines. An advanced degree allows an art historian a wider range of possible career applications, including museums directorships, curators, instructors, preservationists, researchers, and auction house personnel. Some careers may require additional training. NOTE TO TRANSFER STUDENTS: The Associate in Arts in Art History for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as “double-counting”). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions; it is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

A.A.-T. in Studio Arts
Completion of this degree provides a foundation in studio art methods. Program offerings include coursework in art history, 2-D, and 3-D studio practices. The Associate in Arts in Studio Art for Transfer Degree (AA-T) is designed to provide a seamless transfer pathway for students interested in pursuing at least one art studio degree option in the California State University (CSU) system. The degree is comprised of lower division coursework typically required by CSU institutions. Students must complete a total of 60 transferable semester units with a minimum 2.0 GPA, to include either the California State University General Education Breadth pattern or the Intersegmental General Education Transfer Curriculum; students must also earn a grade of C or better in all the courses for the major as described in the Required Program. Upon successful completion of the degree requirements, students will be guaranteed admission to the CSU system with junior status and will not have to repeat lower division coursework. Students are encouraged to meet with a counselor to develop their educational plans as degree options and general education requirements vary for each university.

The Associate in Arts in Studio Arts for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- differentiate major historical movements and developments in the visual arts. PSLO #1
- compose or design works of art that utilize a combination of technique, materials, visual ideas, and experiences. PSLO #2
- construct and document an initial portfolio of artworks for professional presentation. PSLO #3
- critique artworks using correct terminology related to concepts, materials, and techniques. PSLO #4
- evaluate form, image, and artistic creation of visual artworks from different traditions, cultures, and civilizations. PSLO #5

Career Information
Individuals with baccalaureate degrees in art may be placed in the K-12 educational field as well as in museums and galleries as registrars, preparators, and curatorial staff. Individuals may also work as fine artists, graphic artists or designers, illustrators, digital artists, and other commercial work such as freelance photographers. Advanced degrees in art may lead to careers as educators at the college or university level, art directors, art editors, curators, conservators, and restorers for museums and galleries. Many careers may require training beyond the baccalaureate level. NOTE TO TRANSFER STUDENTS: The Associate Degree for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as "double-counting"). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. It is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

Associate Degrees

A.A. in Art - Art History
CRC's art curriculum offers introductory and intermediate level courses in painting, watercolor, computer art, drawing, sculpture, ceramics, printmaking and design, as well as courses in art appreciation and art history. Through the program's art theory and art practice classes, students develop an awareness and understanding of the materials, tools, rationale and significance of art in society. The art curriculum's critical thinking and technical skills components encourage students to utilize independent thought processes and problem solving. This program provides transfer and employment opportunities as well as personal enrichment for students.

The art faculty is composed of professional artists with diverse specializations encompassing the spectrum of the classes offered.

HIGHLIGHTS
*Art faculty who have exhibited regionally, nationally and internationally
*Opportunities to explore artistic pursuits in two- and three-dimensional media using a wide variety of materials and techniques
*Regularly scheduled trips to major museums
*Guest lectures and demonstrations
*New state-of-the-art facility

NOTE TO TRANSFER STUDENTS: If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

Total Units: 23

*The Art - Art History Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.*

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- demonstrate an appreciation of artistic endeavors, cultural expressions, ideas and/or institutions through non-empirical, analytic, interpretive studies and critical thinking projects (SLO #1).
- manage the ability to discuss works of art publicly (SLO #2).
- structure an historical, geographical and chronological context of art (SLO #3).
- express clearly personal analyses and interpretations of arts, ideas, techniques, skills, and/or institutions, and will properly use the vocabulary appropriate to the field (SLO #4).
- choose and apply a variety of scholarly sources for research and express thoughts clearly in writing (SLO #5).
- develop an appreciation for the arts and cultural practices of people of the past (SLO #6).

**Career Information**
A.A. in Art - Design

CRC's art curriculum offers introductory and intermediate level courses in painting, watercolor, digital art, drawing, sculpture, ceramics, printmaking and design, as well as courses in art appreciation and art history. Through the program's art theory and art practice classes, students develop an awareness and understanding of the materials, tools, rationale and significance of art in society. The art curriculum's critical thinking and technical skills components encourage students to utilize independent thought processes and problem solving. This program provides transfer and employment opportunities as well as personal development for students. With a choice of acquiring an A.A. degree in one of three areas related to art the student can tailor the program to their interests. The A.A. degree in Art-History allows the student to focus on the history, theory and research of art products, architecture and artifacts. The A.A. degree in Art-Studio Art is designed for the student wanting to develop their individual technical skill, conceptual abilities and creative processes emphasizing 2-D or 3-D art forms. The A.A. degree in Art-Design allows the student to focus on the application of art technical skills and the creative process as it relates to the applied arts, e.g. graphic design, product design, architecture, web design, interior design, etc.

The art faculty is composed of professional artists with diverse specializations encompassing the spectrum of the classes offered.

**HIGHLIGHTS**

* Art faculty who have exhibited regionally, nationally and internationally
* Opportunities to explore artistic pursuits in two- and three-dimensional media using a wide variety of materials and techniques
* Regularly scheduled trips to major museums
* Guest lectures and demonstrations
* New state-of-the-art facility

**NOTE TO TRANSFER STUDENTS:** If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

**Catalog Date:** June 1, 2020

The Art - Design Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate physical skills/dexterity within a discipline. SLO #1
- manage the ability to discuss works of art publicly. SLO #2
- structure an historical, geographical and chronological context of art. SLO #3
- investigate self-analysis and external analysis techniques through the activity of “critique”. SLO #4
- formulate a conceptual framework for the future by applying analytical skills. SLO #5
- choose and apply a variety of informational resources for research. SLO #6

Career Information

Painter; Sculptor; Ceramist; Art Instructor; Illustrator; Printmaker; Digital Publishing Specialist; Graphic Designer; Gallery Director; Curator; Graphic Artist; Digital Artist Some career options may require more than two years of college study.

A.A. in Art - Studio Art

CRC's art curriculum offers introductory and intermediate level courses in painting, watercolor, digital art, drawing, sculpture, ceramics, printmaking and design, as well as courses in art appreciation and art history. Through the program's art theory and art practice classes, students develop an awareness and understanding of the materials, tools, rationale and significance of art in society. The art curriculum's critical thinking and technical skills components encourage students to utilize independent thought processes and problem solving. This program provides transfer and employment opportunities as well as personal development for students. With a choice of acquiring an A.A. degree in one of three areas related to art the student can tailor the program to their interests. The A.A. degree in Art-History allows the student to focus on the history, theory and research of art products, architecture and artifacts. The A.A. degree in Art-Studio Art is designed for the student wanting to develop their individual skill, conceptual and creative processes emphasizing 2-D or 3-D art forms. The A.A. degree in Art-Design allows the student to focus on the application of art skills and the creative process as it relates to the applied arts, e.g. graphic design, product design, architecture, web design, interior design, etc.

The art faculty is composed of professional artists with diverse specializations encompassing the spectrum of the classes offered.

HIGHLIGHTS

A.A. in Art-Photo

The art-photography program is designed to teach students fine art photography with an emphasis in black and white film based processes. Critical analysis, history and current theories in photography are also requirements.

Students planning to prepare for a four-year degree in Photography should consult the lower division requirements of the university to which they plan to transfer.

The Art-Photo Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- SLO #1 Produce a portfolio that conveys creative self expression.
- SLO #2 Work with silver based and alternative processes in black and white photography.
- SLO #3 Use a variety of film based cameras, including medium and large format.
- SLO #4 Describe the history of photography.
- SLO #5 Recount current trends in photographic theories and aesthetics.

Career Information

Fine art photographer, gallery worker, museum worker, curator or general photographer. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

Certificate of Achievement

Fine Art Photography Certificate

The fine art photography program is designed for students who want to enter a career path in fine art photography. Students will use a variety of cameras and formats to produce images in both color and black and white. Personal expression and creativity, history and contemporary issues in photography and visual communication will also be emphasized.

Student Learning Outcomes
Art (ART)

ART 300 Drawing and Composition I

This course covers the fundamentals of drawing emphasizing the use of line, shape, value, perspective, space, and composition. It introduces and uses various drawing media and techniques for drawing. This is a foundation requirement for all art students. Field trips may be required.

Upon completion of this course, the student will be able to:

- DIFFERENTIATE VARIOUS DRAWING MATERIALS AND TECHNIQUES APPROPRIATE FOR EACH. SLO#1
- PRIORITIZE, INTEGRATE AND APPLY CONCEPTS RELATED TO FORM AND SPATIAL DEVELOPMENT AND COMPOSITIONAL UNITY WITH THE INTENT OF CREATING ILLUSION ON A TWO-DIMENSIONAL SURFACE UTILIZING A PROBLEM SOLVING APPROACH TO PROJECTS. SLO#2
- evaluate and apply methods of organizational line and sight measurement.
- assess and interpret light by utilizing a range of values.
- judge and apply principles of perspective.
- organize the visual elements based on the principles of design.
- FORMULATE AN HISTORICAL, GEOGRAPHICAL AND CHRONOLOGICAL CONTEXT OF DRAWING. SLO#3
- CRITIQUE SELF AND PEER WORK USING SELECT CRITERIA SUCH AS COMPARISON, CONTRAST AND FORMAL ANALYSIS. SLO#4

Career Information

freelance photographer, editorial photographer, photojournalist, gallery apprentice, museum apprentice, teacher

Art (ART)

ART 301 Digital Drawing and Composition

This course is designed to address the traditional qualities of creative drawing and the unique properties of drawings produced using computer technology. The course includes problems in observation and expression and the translating of these experiences into graphic terms by exploration of gesture, line, texture, shape, volume, space, perspective, light, and shadow. Field trips may be planned.

Upon completion of this program, the student will be able to:

- PSLO #1 communicate visual ideas in a variety of formats
- PSLO #2 describe important historical and contemporary movements in photography
- PSLO #3 produce a portfolio of images emphasizing personal creativity and self expression

Career Information

freelance photographer, editorial photographer, photojournalist, gallery apprentice, museum apprentice, teacher
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate and synthesize various digital drawing materials, techniques and software appropriate for vector-based and pixel-based images. SLO#1
- analyze and integrate concepts related to form and spatial development and compose with the intent of creating illusion on a two-dimensional surface using a problem solving approach. SLO #2
- distinguish properties of scanning reflective art and transparencies. SLO#3
- construct, manage and manipulate digital images. SLO#4
- evaluate, prepare and print digital files. SLO#5
- critique and articulate visual concepts related to completed work. SLO#6

ART 302 Drawing and Composition II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: [Drawing Fundamentals](http://crc.losrios.edu/course-families#id_100006)
Prerequisite: ART 300 with a grade of “C” or better
Transferable: CSU; UC
General Education: CSU Area C1
C-ID: C-ID ARTS 205
Catalog Date: June 1, 2020

This studio course utilizes the skills acquired in ART 300 to pursue more complex problems. The student will initiate and execute a series of related works. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- PRODUCE SOLUTIONS TO MORE COMPLEX PROBLEMS RELATED TO FORM, SPATIAL DEVELOPMENT AND COMPOSITION. SLO#1
- integrate and refine technical skills using a greater variety of drawing tools, techniques and surfaces.
- distinguish the basic properties of color and color mixing with drawing media and relate value to color, space and composition.
- INVESTIGATE AND FORMULATE METHODS TOWARD THE ACHIEVEMENT OF PERSONAL EXPRESSION AND SELF-DIRECTION. SLO #2
- Complete a series of works related in subject, technique or theme.
- Evaluate, based on select criteria, one’s own work and the work of others through critiques and discussions.
- SYNTHESIZE DRAWING CONCEPTS AND HISTORY OF DRAWING BY APPLYING THE LANGUAGE IN WRITTEN FORM TO THE VIEWING EXPERIENCE. SLO #3

ART 304 Figure Drawing I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: [Figure Studies](http://crc.losrios.edu/course-families#id_100008)
Prerequisite: ART 300 with a grade of “C” or better
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1
Catalog Date: June 1, 2020

This studio class offers drawing from the human figure. There will be lectures and discussion on proportion, anatomy, and the relationship of the figure to space and composition. Student may wish to challenge the prerequisite by presenting to the instructor a portfolio of their work. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• SYNTHESIZE A KNOWLEDGE OF ANATOMICAL STRUCTURE IN THE INTERPRETATION OF HUMAN PROPORTIONS AND THE RELATIONSHIP OF THE FIGURE TO SPACE. SLO #1

• Analyze and complete drawings from the human skeleton to understand bone placement and connections.

• Utilize analytical line and sight measurement to control the proportions of body features and placement.

• INCORPORATE THE ELEMENTS OF DRAWING (LINE, VALUE, TEXTURE, PERSPECTIVE, ETC.) WHEN CREATING COMPOSITIONS WITH THE FIGURE AS THE SUBJECT. SLO #2

• Utilize rapid visualization techniques such as gesture drawing or quick studies and contour to assess overall structure, placement, movement and composition.

• Assess and interpret light on the figure by utilizing a range of values.

• COMPARE AND CONTRAST HISTORICAL AND CONTEMPORARY CONCEPTUAL APPROACHES TO DRAWING THE FIGURE. SLO #3

• ASSESS AND EVALUATE THE DEPICTION OF THE HUMAN FORM THROUGH VERBAL CRITIQUE AND WRITTEN ASSIGNMENTS UTILIZING ART LANGUAGE. SLO #4

ART 305 Figure Drawing II

| Units: 3 |
| Hours: 36 hours LEC; 54 hours LAB |
| Course Family: Figure Studies (http://crc.losrios.edu/course-families#id_100008) |
| Prerequisite: ART 304 with a grade of "C" or better |
| Transferable: CSU; UC |
| General Education: CSU Area C1 |
| C-ID: C-ID ARTS 200 |
| Catalog Data: June 1, 2020 |

This studio course offers intermediate drawing from the human figure. There will be more sophisticated lectures and discussions on proportion, anatomy, and the relationship of the figure to space and composition. A local field trip to a museum or gallery may be assigned.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• ANALYZE AND DRAW WITH INCREASING SKILL THE FIGURE WITH RESPECT TO ANATOMY AND PROPORTION. SLO #1

• Assess through sight measurement and analytical line the figure proportions and placement of parts based on anatomical knowledge.

• Incorporate the use of color through dry color media to depict light, texture, form and spatial relationships within the figure.

• ASSESS AND CONTROL THE HUMAN FORM AS THE DOMINANT EXPRESSIVE ELEMENT IN A COMPOSITION THROUGH A SERIES OF DIRECTED PROJECTS. SLO #2

• Investigate the use of environment, props, clothing and drapery in complex compositions with the figure.

• Evoke mood or theme by controlling value and color relationships.

• GENERATE A SUBJECTIVE STYLE BASED ON RESPONSE TO HISTORICAL THEORY, CONCEPTS AND REPEATED PRACTICAL APPLICATIONS. SLO #3

• Research the use of the human figure in visual art and respond by creating works that demonstrate individual expression.

• Assess the intent and effectiveness of individual solutions to the use of the human figure as the primary subject.

• INTEGRATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH VERBAL "CRITIQUES" AND WRITTEN RESPONSE TO WORKS OF ART. SLO #4

• Analyze and respond to others work through oral and written communication during class and/or group discussion during class critique and in response to museum or gallery visits.

ART 312 Portrait Drawing
This course is an introduction to and exploration of the human face as a subject in art. Focus will be placed on the development of skills needed to portray specific individuals rather than a generalized image. This is primarily a practice course including elements of the history and traditions of portraiture as well as anatomy.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SYNTHESIZE A KNOWLEDGE OF ANATOMICAL STRUCTURE IN THE INTERPRETATION OF HUMAN FACIAL PROPORTIONS. SLO #1
- Assess through analytical line and sight measurement the relative position and size of various facial features.
- Investigate the skeletal and planar structure of the head through drawings from skull.
- Assess the uniqueness of facial features and apply drawing skill in terms proportions, value relationships and textural control in portraying those features to capture not only a likeliness but also a personality in their drawings.
- ANALYZE AND EXPLORE THE RELATIONSHIP OF THE PORTRAIT IN COMPOSITION. SLO #2
- EXAMINE AND UTILIZE A VARIETY OF HISTORICAL APPROACHES, MEDIA, & TECHNIQUES USED IN DRAWING A PORTRAIT. SLO #3
- EVALUATE THE PORTRAIT AS SUBJECT AND CONTENT IN ART BOTH VERBALLY IN STUDIO “CRITIQUE” AND THROUGH WRITTEN ASSIGNMENT. SLO #4

**ART 320 Design: Fundamentals**

This course is comprised of lectures and projects concentrating on the elements of design (line, shape, color, texture, form, space) and the principles of organization (such as unity, variety, contrast, balance, emphasis, etc.) as applicable to both the fine and applied arts. Field trips may be planned.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- CREATE COMPOSITIONS USING THE ELEMENTS OF DESIGN: LINE, SHAPE, VALUE, TEXTURE, COLOR AND SPACE AND THE PRINCIPLES OF ORGANIZATION: EMPHASIS, HARMONY, VARIETY, MOVEMENT, BALANCE, PROPORTION AND ECONOMY. SLO #1
- research various design organizational strategies, e.g. open vs. closed, golden mean, gestalt, unity, rhythm, figure/ground, etc.
- distinguish types of balance: symmetrical, asymmetrical, radial, axis.
- investigate the various properties of the visual elements, e.g. line qualities and direction, value scale or range, color hue, saturation and value.
- DEMONSTRATE THE PHYSICAL SKILLS/DEXTERITY TO USE DESIGN TOOLS PROFESSIONALLY IN THE EXPRESSION OF CONCEPTS. SLO #2
- Assemble and utilize various rulers and shape tools to accurately design images.
- Assess and apply pencil, pen and brush tools to create a professional finish.
- FORMULATE A CONCEPTUAL FRAMEWORK FOR THE FUTURE BY APPLYING ANALYTICAL SKILLS. SLO #3
- Analyze works of fine and applied art to critically assess the components of subject, form and content.
- INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUE”. SLO #4
Synthesize design concepts and history by applying the visual language in verbal and written form to the viewing experience.

ART 323 Design: Color Theory

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1
Catalog Date: June 1, 2020

This course covers studio problems in the use and understanding of color and its application to works of art, interior design and graphics, basics of color theory, and color interchange. It also includes image and composition as related to the use of color both functionally and creatively. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DIFFERENTIATE THE HISTORICAL AND CULTURAL USES OF COLOR AND THE HISTORICAL CHANGES IN ATTITUDE TOWARD COLOR. SLO #1
- COMPARE AND CONTRAST MAJOR THEORIES OF COLOR. SLO #2
- Understand the origin and rational for various systems of organizing color including Munsell's color solid model.
- Compare differences between color schemes e.g. complementary, analogous, triadic, etc.
- MANAGE SKILLS IN THE APPLICATION OF PAINT, KNOWLEDGE OF COLOR MIXING, AND COLOR INTERACTIONS. SLO #3
- Assess the effects of altering color in various ways such as single color alteration, multiple color alteration, and visual alteration.
- Contrast the difference between light color mixing and pigment color mixing and how this affects artistic production.
- ASSESS THE USE OF COLOR IN CONCEPT AND DESIGN SOLUTIONS AND APPLY THIS ANALYSIS TOWARDS MANIPULATING COLOR FOR CREATIVE EXPRESSION. SLO #4
- INTEGRATE KNOWLEDGE OF COLOR THEORY AND VISUAL VOCABULARY THROUGH VERBAL AND WRITTEN CRITIQUE OF ONE'S OWN AND OTHERS WORK. SLO #5
- analyze works of fine art and design to critically assess the function of color as it relates to the components of subject, form and content.

ART 324 Collage and Assemblage

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1
Catalog Date: June 1, 2020

This course investigates the alteration and creation of a dimensional surface with found and constructed materials. Topics on the history of collage and assemblage and the application of historical and contemporary techniques and concepts provide the impetus for production of works of art. Development of a personal visual language is fundamental to this course. Field trips may be planned.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Choose diverse fragments of scraps and found objects to build a collection of materials. SLO #1
- Evaluate the potential design aspects of an object and assess the potential of various materials to suggest meaningful, artistic expression.
- Organize the use of artistic elements such as line, shape, value, texture, color, and space utilizing the principles of design. SLO #2
- Conceive a composition of found and chosen materials based upon the inherent properties of selected materials.
- Assess and revise expressive elements and unity in a composition.
Investigate major historical developments and trends in contemporary work in assemblage. SLO #3

Critique examples of student and professional work in relation to its historical context and design. SLO #4

ART 325 Introduction to Graphic Design

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ART 320 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This is an introduction to the visual communication arts. The course will cover a series of creative problems designed to analyze letterform and image and demonstrate impact on visual perception. The student will be introduced to the terminology of traditional and digital tools and the visual language of graphic design. Field trips may be required for this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- ACQUIRE TECHNICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1
  - Arrange compositional elements and apply Gestalt principles using digital methods.
  - Apply digital tools to create and manipulate production art.
  - Assess graphic and text methods of input, output and file storage such as scanning and printing and understanding various file formats.
  - Differentiate monitor color models and printing color models.
  - ESTABLISH AN HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT OF ART. SLO#2
    - Describe differences between traditional and contemporary methods of creating graphic design.
    - Assess the role of graphic design in art history.
    - DEVELOP SELF-ANALYSIS AND EXTERNAL ANALYSIS THROUGH THE ACTIVITY OF CRITIQUES. SLO#3
      - Evaluate and assess self and peer projects from start to completion implementing specific analysis vocabulary.
    - ACQUIRE ANALYTICAL SKILLS AND A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO#4
      - Define terms specific to traditional and digital graphic design and production art.
      - Research a variety of information sources that will inform the graphic design solution.
      - Deduce differences between vector, raster and page layout software.
      - Analyze the relationship of letter form and image in visual communication.
      - Compose, coordinate and effect a two-dimensional design or project plan using current methods of production.
      - Assemble a professional digital portfolio that demonstrates a personal creative style in graphic communication design.

ART 327 Painting I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Painting (http://crc.losrios.edu/course-families#id_100009)
Prerequisite: None.
Advisory: ART 300
Transferable: CSU; UC
General Education: CSU Area C1
C-ID: C-ID ARTS 210
Catalog Date: June 1, 2020

This is an introduction to the tools, materials, and techniques of painting. Coursework includes exercises in light and color theory, description of form, color and spatial development, and composition. Field trips may be required for this course.
Upon completion of this course, the student will be able to:

- **BUILD PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1**
- Evaluate and judge the correlation between painting supports, surface preparation, paint application and techniques for opaque painting medium.
- Create the color wheel and utilize the color wheel to make effective decisions for color harmony, balance and tone.
- Assess the effects of color mixing and application based on understanding the subtractive color model and color theory.
- **DISCRIMINATE AND ANALYZE THE MAJOR CONCERNS OF PAINTING: FORM DEVELOPMENT, SPATIAL REPRESENTATION, COMPOSITION AND EXPRESSION. SLO #2**
- Assess the effects of light on color.
- Understand the effect of color value, saturation and temperature on form development and spatial interpretation.
- **UTILIZE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #3**
- Integrate concept, process and execution in order to create compositions with a variety of subjects including still life, landscape and figure.
- **INTEGRATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUES”. SLO #4**

**ART 328 Painting II**

- **Units:** 3
- **Hours:** 36 hours LEC; 54 hours LAB
- **Course Family:** Painting [http://crc.losrios.edu/course-families#id_100009](http://crc.losrios.edu/course-families#id_100009)
- **Prerequisite:** ART 327 with a grade of "C" or better
- **Transferable:** CSU; UC
- **General Education:** CSU Area C1
- **Catalog Date:** June 1, 2020

This is an intermediate studio course for the student who wishes to develop greater technical skills and problem-solving ability in a more independent framework. The student will initiate and execute progressively complex problems and assignments. Field trips may be required for this course.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **CONSTRUCT PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1**
- Evaluate skills and manage judgment in the application of painting concerns: handling of medium, spatial development, composition and expression.
- Assess appropriate support for intended project resolution.
- **MANAGE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #2**
- Compose a series of paintings that reflect more complex problem solving in ideation, process and presentation.
- Research and construct projects that respond to the variations of artistic expression in historical painting and contemporary concerns.
- **DEMONSTRATE CRITICAL ANALYSIS IN WRITTEN FORM. SLO #3**
- Evaluate concerns in painting historically and in contemporary world through research project and written analysis of project resolutions.
- **DEMONSTRATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUES.” SLO #4**
- Justify analysis of own work and peer work using various criteria such as comparison, formal analysis and assessment of subject matter, form and content relationship.
- **ASSESS AND UTILIZE A VARIETY OF INFORMATIONAL SOURCES FOR RESEARCH. SLO #5**
**ART 330 Mural Painting**

This course is a comparative survey of the use of mural painting as an interactive, public art form used throughout the world and across time. This course examines the process of creating a mural painting by analyzing a site, researching, planning, and executing murals in public spaces and working collaboratively with others. Field trips are required to execute the work on location if applicable.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- DEMONSTRATE PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1
  - diagnose, compare and employ appropriate surface, media and techniques for chosen site.
  - investigate, prioritize and apply the planning steps in large scale commission work.
  - coordinate and work collaboratively with others to execute a mural as a public art form.
- BUILD SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUES”. SLO #2
  - assess the style, preliminary sketches and final design for the project based on its location, materials, and audience.
  - evaluate success of design on aesthetic, narrative and technical levels.
- CONSTRUCT AN HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT OF MURAL ART. SLO #3
  - research and contrast the function or purpose of the mural art form in various cultures and time periods in history.

**ART 336 Watercolor Painting**

This is an introduction to transparent watercolor painting. The class covers media, methods of brush painting, representational and non-representational composition, color relationships, and creative resolutions to watercolor problems. Field trips may be required for this course.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- BUILD PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1
  - Generate proficiency with the fundamentals of watercolor media: wash, transition, dry brush, glazing, and wet-into-wet.
  - Evaluate strength, responsiveness, and freedom of handling medium through the interaction of watercolor on various papers.
- DISCRIMINATE AND ANALYZE THE MAJOR CONCERNS OF PAINTING: FORM DEVELOPMENT, SPATIAL REPRESENTATION, COMPOSITION AND EXPRESSION. SLO #2
  - Differentiate the affect of color value, saturation and temperature on form development and spatial interpretation.
- UTILIZE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #3
  - Develop visual analysis skills and translate these perceptions to the watercolor media.
  - Synthesize concept, process and execution in order to create compositions with a variety of subjects including still life, landscape and figure.
- INTEGRATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUES”. SLO #4
Assess the effectiveness of problem solutions based on media use, compositional strategies, and correlation of form and content expression.

ESTABLISH AN HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT FOR ART. SLO #5

Appraise the antecedents in history in watercolor painting and assess contemporary trends in the watercolor medium.

**ART 337 Intermediate Watercolor Painting**

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Course Family: Painting (http://crc.losrios.edu/course-families#id_100009)  
Prerequisite: ART 336 with a grade of "C" or better  
Transferable: CSU; UC  
Catalog Date: June 1, 2020

This is an intermediate watercolor course. It includes an in-depth study of contemporary methods and concepts in transparent watercolor. Emphasis is given to different approaches to watercolor, as well as composition, technical problems and solutions, and individual style development. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **CONSTRUCT PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1**
- Assess appropriate support and technical handling of watercolor for intended project resolution.
- Evaluate skills and manage judgment in the application of painting concerns: handling of watercolor medium, spatial and form development using color, compositional design and expression.
- **MANAGE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #2**
- Compose a series of watercolor paintings that reflect more complex problem solving in ideation, process and presentation.
- Explore personal expression through both style and content.
- **INVESTIGATE CRITICAL ANALYSIS IN WRITTEN FORM. SLO #3**
- Evaluate concerns in watercolor painting historically and in the contemporary world through research project and written analysis of project resolutions.
- **CONFIRM SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF "CRITIQUES". SLO #4**
- Justify analysis of own work and peer work using various criteria such as comparison, formal analysis and assessment of subject matter, form and content relationship.

**ART 338 Introduction to Digital Painting I**

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Course Family: Painting (http://crc.losrios.edu/course-families#id_100009)  
Prerequisite: None.  
Transferable: CSU; UC  
General Education: AA/AS Area I  
Catalog Date: June 1, 2020

This course is an introduction to the tools, materials, and techniques of painting using digital software to create and manipulate images. Coursework includes exercises in light and color theory, description of form, color and spatial development, and composition. The fundamental skills of drawing and painting will be applied to individual portfolio quality projects. Field trips may be planned.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **assess and synthesize various painting tools and techniques in painting software. SLO #1**
- **discriminate and analyze through projects the major concerns of painting: spatial representation, form development, composition and expression. SLO #2**
• integrate through directed projects the understanding of ideation, process and product presentation. SLO #3
• construct, manage, manipulate and print digital images. SLO #4
• critique and articulate visual concepts related to completed work. SLO #5

ART 361 Printmaking: Survey

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• BUILD PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1
• Differentiate the tools and techniques applied to each printmaking process: intaglio, relief, stencil and/or monotype.
• Assess the relationship of paper or other surfaces and the print process to achieve the most effective aesthetic combination.
• Create editions by printing a matrix repeatedly.

• UTILIZE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #2
• Integrate ideas in relationship to different printmaking techniques.
• INTEGRATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUES”. SLO #3
• Analyze printed compositions on the basis of applied techniques and print aesthetics.
• Justify analysis of own work and peer work using various criteria such as comparison, formal analysis and assessment of subject matter, form and content relationship.
• CONSTRUCT AN HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT OF PRINTMAKING. SLO #4
• Correlate the major concerns of printmaking within a specific printmaking process.
• Research the development of printmaking as a major art medium.

ART 362 Printmaking: Intaglio

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• BUILD PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1
• Differentiate techniques of intaglio: hard ground etching, soft ground etching, aquatint, drypoint, engraving and/or mezzotint.

This course studies the techniques of Intaglio processes including hard ground etching, soft ground etching, aquatint, drypoint, engraving and/or mezzotint. Field trips are required.
- Formulate and execute solutions to image development utilizing various intaglio techniques.
- Compare and select appropriate papers for image production and proper presentation formats.
- Manage production to create an edition.
- ORGANIZE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #2
- Synthesize understanding of intaglio processes with imaginative use of materials, tools, and techniques to resolve image.
- INTEGRATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUES”. SLO #3
- Evaluate own prints and those of their peers by discussing technical effects, assessing the composition employing the vocabulary of two-dimensional design and judging the overall print quality.
- CONSTRUCT AN HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT OF INTAGLIO. SLO#4
- Appraise the antecedents in history in intaglio printmaking and assess contemporary trends in the use of intaglio.

**ART 364 Printmaking: Relief**

- **Units:** 3
- **Hours:** 36 hours LEC; 54 hours LAB
- **Course Family:** Printmaking (http://crc.losrios.edu/course-families#id_100010)
- **Prerequisite:** None.
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area I
- **Catalog Date:** June 1, 2020

This course presents the techniques of wood and linoleum cutting and printing by hand and by press. Field trips are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- BUILD PHYSICAL SKILLS/DEXTERITY WITHIN A DISCIPLINE. SLO #1
- Differentiate each relief technique, distinguish tools to carve and control effects of each technique and tool.
- Formulate and execute solutions to image development utilizing various relief techniques.
- Compare and select appropriate papers for image production and proper presentation formats.
- Manage production to create an edition.
- ORGANIZE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #2
- Synthesize understanding of relief processes with imaginative use of materials, tools, and techniques to resolve image.
- INTEGRATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUES”. SLO #3
- Evaluate own prints and those of their peers by discussing technical effects, assessing the composition employing the vocabulary of two-dimensional design and judging the overall print quality.
- CONSTRUCT AN HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT OF ART. SLO#4
- Appraise the antecedents in history in relief printmaking and assess contemporary trends in the use of relief printing.

**ART 370 Three Dimensional Design**

- **Units:** 3
- **Hours:** 36 hours LEC; 54 hours LAB
- **Prerequisite:** None.
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area I; CSU Area C1
- **C-ID:** C-ID ARTS 101
- **Catalog Date:** June 1, 2020

This is a studio course covering the analysis of historical and contemporary designs and the resolution of technical and conceptual problems (using a variety of media such as: wood, fabric, glass, etc.) by the creation of 3-dimensional forms. Form, color, space, composition, and other formal values will be considered. This course may include visits to nearby museums and/or galleries.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DEMONSTRATE FUNDAMENTAL PHYSICAL SKILLS/DEXTERITY IN THE FABRICATION OF THREE DIMENSIONAL FORMS. (SLO #1)**
- Create preliminary drawings to develop ideas for three-dimensional forms.
- Incorporate a variety of construction methods necessary to assemble three-dimensional forms from various media.
- Integrate knowledge of the properties and tendencies of various media while constructing three dimensional forms.
- **MANAGE THE ABILITY TO DISCUSS WORKS OF ART PUBLICLY. (SLO #2)**
- Utilize the basic vocabulary of art and design.
- Design standards to evaluate the functional and aesthetic value of three-dimensional forms.
- Design observations regarding the functionality and aesthetics of three-dimensional forms.
- Manage oral presentations in a professional manner while presenting finished projects.
- **STRUCTURE A HISTORICAL, GEOGRAPHICAL AND CHRONOLOGICAL CONTEXT FOR THREE-DIMENSIONAL FORMS. (SLO #3)**
- Examine and consider how three-dimensional design concepts have been applied past and present in various cultures.
- Analyze how established design concepts are incorporated into contemporary three-dimensional forms.
- **INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUE”. (SLO #4)**
- Critique three-dimensional forms and discuss the decision making process used during the creation of those forms.
- Assess and evaluate the aesthetic attributes of three-dimensional forms.
- Evaluate the strength and clarity of any message or symbolism present in a three dimensional form.
- Judge points of craftsmanship used in the construction of three-dimensional forms.
- Evaluate the function and impact of three-dimensional forms as they relate to the environment in which they are displayed.
- Examine and explore the aesthetic attributes and relationship of a three-dimensional form within the context of its environment.
- Assess the use of other techniques or design alterations that might enhance aesthetic attributes of a three-dimensional form.
- **FORMULATE A CONCEPTUAL FRAMEWORK FOR THE FUTURE BY APPLYING ANALYTICAL SKILLS. (SLO #5)**
- Evaluate how the level of craftsmanship and planning executed during production of a project directly relates to the precision and overall success evident in a finished three-dimensional form.
- Assess the time allotted to each step in the production of a project and evaluate its impact on the execution of the work.
- **CHOOSE AND APPLY A VARIETY OF INFORMATIONAL RESOURCES FOR RESEARCH. (SLO #6)**
- Incorporate information from museum/gallery trips, Internet research, library research and personal observation in the conceptualization of three-dimensional projects.
- Support and defend their own observations and opinions regarding three-dimensional art forms.

**ART 372 Sculpture**

- **Units:** 3
- **Hours:** 36 hours LEC; 54 hours LAB
- **Course Family:** Sculpture (http://crc.losrios.edu/course-families#id_100011)
- **Prerequisites:** None.
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area I; CSU Area C1
- **Catalog Date:** June 1, 2020

This is a basic practice class in the expressive use of form and color in space. The student will use a variety of media, including plaster, wood, glass, clay, or stone. Creative effort, development of individual expression, new ideas, and knowledge of technical processes will be stressed. Content will be developed by using both historical and contemporary approaches.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- **DEMONSTRATE FUNDAMENTAL PHYSICAL SKILLS/DEXTERITY IN THE FABRICATION OF THREE-DIMENSIONAL SCULPTURE.** (SLO#1)
- Create preliminary drawings to develop ideas for sculptures.
- Incorporate a variety of construction methods necessary to assemble sculptures from various media.
- Integrate knowledge of the properties and tendencies of various media while creating sculptural forms.
- **MANAGE THE ABILITY TO DISCUSS WORKS OF ART PUBLICLY.** (SLO#2)
- Utilize the basic vocabulary of art.
- Design standards to evaluate the functional and aesthetic value of sculptural forms.
- Report observations regarding the function and aesthetic value of sculptural forms.
- Manage oral presentations in a professional manner while presenting finished projects.
- **STRUCTURE A HISTORICAL, GEOGRAPHICAL AND CHRONOLOGICAL CONTEXT FOR SCULPTURAL FORMS.** (SLO#3)
- Examine and consider how concepts for sculpture have been applied past and present in various cultures.
- Analyze how established concepts for sculpture are incorporated into contemporary sculptural forms.
- Correlate the aesthetic trends and stylistic devices apparent in contemporary sculpture with those from various historic, geographic and cultural sources.
- **INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF "CRITIQUE".** (SLO#4)
- Critique sculptural forms and discuss the decision making process used during the creation of those forms.
- Assess and evaluate the aesthetic attributes of sculptural forms.
- Evaluate the strength and clarity of any message or symbolism present in sculptural forms.
- Judge points of craftsmanship used in the construction of sculptural forms.
- Examine one's own artistic point of view through self critique.
- **FORMULATE A CONCEPTUAL FRAMEWORK FOR THE FUTURE BY APPLYING ANALYTICAL SKILLS.** (SLO#5)
- Evaluate how the level of craftsmanship and planning executed during production of a project directly relates to the precision and overall success evident in a finished sculptural form.
- Assess the time allotted to each step in the production of a project and evaluate its impact on the execution of the work.
- **CHOOSE AND APPLY A VARIETY OF INFORMATIONAL RESOURCES FOR RESEARCH.** (SLO#6)
- Incorporate information from museum/gallery trips, Internet research, library research and personal observation in the conceptualization of sculptural forms.
- Support and defend their own observations and opinions regarding sculptural forms.

This course is an introductory class in wheel-thrown ceramics. The course will provide students with a broad understanding of the ceramics process, from clay composition to fired-glazed wares. Alternative firing processes are explored, such as Raku, pit firing, and sawdust firing. Students at all skill levels may enroll in the class.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE THE FUNDAMENTAL PHYSICAL SKILLS/DEXTERITY IN THE CREATION OF CERAMIC WHEEL THROWN FORMS** (SLO#1)
Create functional ceramic vessel forms implementing the basic techniques of wheel throwing.

Integrate knowledge of the properties and tendencies of the material, clay.

Incorporate standards of functionality and aesthetics while creating wheel thrown forms.

Demonstrate informed choices in color, texture, design and pattern in the application of basic glazing techniques.

MANAGE THE ABILITY TO DISCUSS WORKS OF ART PUBLICLY (SLO#2)

Utilize the basic vocabulary of ceramic art.

Design standards to evaluate the functional and aesthetic value of pottery forms through guided discussion.

Report observations regarding functionality and aesthetics of pottery forms.

Formulate questions pertaining to aspects of throwing techniques used, choice of materials, and firing process used in the creation of pottery forms.

STRUCTURE A HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT FOR CERAMIC FORMS(SLO#3)

Examine and discuss historical trends of ceramic throwing/building techniques, firing and glazing materials/methods, practiced in various cultures.

Compare and contrast the function and creation of ceramic forms beyond fine art and every day domestic use, into the realm of industrial ceramic applications.

Analyze the utilitarian nature of pottery forms throughout history and how it affected the design and evolution of those forms.

INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUE”(SLO#4)

Critique finished vessel forms and discuss the decision making process used during the creation of those forms.

Assess and evaluate the functionality and aesthetic attributes of pottery forms.

Verify attributes of craftsmanship in pottery forms at an elementary level.

Evaluate how changes in throwing execution, choice of materials, and application of glazes might impact pottery forms.

Examine one’s own artistic point of view through critique.

CHOOSE AND APPLY A VARIETY OF INFORMATIONAL RESOURCES FOR RESEARCH(SLO#5)

Incorporate information from museum/gallery trips, Internet research, library research and personal observation in the creation of pottery forms.

Support and defend their own observations and opinions regarding ceramic art forms.

ART 395 Wheel Thrown Ceramics, Intermediate

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ART 394 with a grade of “C” or better, or placement through the assessment process.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is an intermediate class in wheel thrown ceramics. The course will provide students with opportunities to further explore the technical and creative processes of ceramic pottery-making, such as, Raku and primitive firing processes and experimentation of different surface treatments.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

DEMONSTRATE PROFICIENT PHYSICAL SKILLS/DEXTERITY IN THE CREATION OF CERAMIC WHEEL THROWN FORMS(SLO#1)

Create functional ceramic vessel forms, exploring the technical and creative processes of pottery making beyond the use of basic techniques.

Conceive and develop more personal artistic concepts to be expressed in the creation of ceramic vessel forms.

Experiment with alternative throwing, building, glazing and firing techniques.

Systematize practices to achieve a higher degree of craftsmanship, functionality and aesthetics while creating ceramic vessel forms.
Incorporate the usage of multiple thrown forms to build composite pieces.

- MANAGE THE ABILITY TO DISCUSS WORKS OF ART PUBLICLY(SLO#2)

Utilize ceramic art terminology that reflects additional building, throwing, glazing and firing techniques learned in the Intermediate Wheel Thrown Ceramics class.

- Evaluate the functionality and aesthetics of pottery forms commensurate with skills acquired in the Intermediate Wheel Thrown Ceramics class.

- Formulate questions pertaining to aspects of throwing techniques used, choice of materials, and firing process used in the creation of pottery forms commensurate with the Intermediate Wheel Thrown Ceramics class.

- STRUCTURE A HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT FOR CERAMIC FORMS(SLO#3)

Examine and discuss the historical trends of ceramic throwing/building techniques, firing and glazing materials/methods, practiced in various cultures.

- Analyze the utilitarian nature of pottery forms throughout history and how it affected the design and evolution of those forms.

- Incorporate culturally distinct motifs and ornamentation techniques in the development of their own artistic statements.

- INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUE”(SLO#4)

Critique finished vessel forms and discuss the decision making process used during the creation of those forms.

- Assess and evaluate the functionality and aesthetic attributes of pottery forms.

- Verify attributes of craftsmanship in pottery forms at a level commensurate with the Intermediate Wheel Thrown Ceramics class.

- Evaluate how changes in throwing execution, choice of materials, and application of glazes might impact pottery forms.

- Examine the degree to which the student executed a more personalized artistic expression through their functional pottery forms.

- Examine one's own individual artistic point of view through critique.

- CHOOSE AND APPLY A VARIETY OF INFORMATIONAL RESOURCES FOR RESEARCH(SLO#5)

Incorporate information from museum/gallery trips, Internet research, library research and personal observation in the creation of pottery forms.

- Support and defend their own observations and opinions regarding ceramic art forms.

**ART 396 Wheel Thrown Ceramics, Advanced**

**Units:** 3

**Hours:** 36 hours LEC; 54 hours LAB

**Prerequisite:** ART 395 with a grade of “C” or better

**Transferable:** CSU; UC

**Catalog Date:** June 1, 2020

This course is an advanced class in wheel thrown ceramics. The class will provide students with individual approaches to create their own unique pottery forms. Emphasis will be placed on more aesthetic approaches to pottery-making. Students will be able to express individual artistic concepts and ideas through pottery forms using various advanced ceramic techniques, which include glazing, firing, and surface treatment.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE MASTERY OF PHYSICAL SKILLS/DEXTERITY IN THE CREATION OF WHEEL THROWN FORMS(SLO#1)**

Create functional ceramic vessel forms, exploring the technical and creative processes of pottery making beyond the use of intermediate techniques.

- Conceive and develop more personal artistic concepts to be expressed in the creation of ceramic vessel forms.

- Experiment with alternative throwing, building, glazing and firing techniques.

- Systematize practices to achieve a higher degree of craftsmanship, functionality and aesthetics while creating ceramic vessel forms.

- Produce ceramic vessel forms that are ready to exhibit in professional settings.
MANAGE THE ABILITY TO DISCUSS WORKS OF ART PUBLICLY (SLO#2)

Utilize ceramic art terminology that reflects additional building, throwing, glazing and firing techniques learned in the Advanced Wheel Thrown Ceramic class.

Evaluate the functionality and aesthetics of pottery forms commensurate with skills acquired in the Advanced Wheel Thrown Ceramics class.

Formulate questions pertaining to of throwing techniques used, choice of materials, and firing process used in the creation pottery forms commensurate with the Advanced Wheel Thrown Ceramics class.

STRUCTURE A HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT FOR CERAMIC FORMS (SLO#3)

Examine and discuss the historical trends of ceramic throwing/building techniques, firing and glazing materials/methods, practiced in various cultures.

Analyze the utilitarian nature of pottery forms throughout history and how it affected the design and evolution of those forms.

Incorporate culturally distinct motifs and ornamentation techniques in the development of one's own artistic statements.

INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUE” (SLO#4)

Critique finished vessel forms and discuss the decision making process used during the creation of those forms.

Assess and evaluate the functionality and aesthetic attributes of pottery forms.

Verify attributes of craftsmanship in pottery forms at a level commensurate with the Advanced Wheel Thrown Ceramics class.

Evaluate how changes in throwing execution, choice of materials, and application of glazes might impact pottery forms.

Examine the degree to which the student executed a more personalized artistic expression through their functional pottery forms.

Examine and explore one's own artistic point of view through critique.

FORMULATE A CONCEPTUAL FRAMEWORK FOR THE FUTURE BY APPLYING ANALYTICAL SKILLS (SLO#5)

Categorize their artistic style, and assess the logistics, audience/venues, and budget for the monetary/time constraints affecting their work.

Research the factors involved with exhibiting in professional settings and/or establishing a personal ceramic studio.

Investigate criteria influencing competition juries and apply this to the conceptualization of projects.

Design projects and accompanying presentations for juried art competitions/professional exhibitions.

CHOOSE AND APPLY A VARIETY OF INFORMATIONAL RESOURCES FOR RESEARCH (SLO #6)

Incorporate information from museum/gallery trips, Internet research, library research and personal observation in the creation of pottery forms.

Support and defend one's own observations and opinions regarding ceramic art forms.

---

ART 402 Beginning Clay Sculpture

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU; UC  
**Catalog Date:** June 1, 2020

This course is an introduction to the basic hand-building techniques and methods. The class includes glazing and firing processes used in clay sculpture. Lectures and group discussions will be conducted in connection with the course.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE THE FUNDAMENTAL PHYSICAL SKILLS/DEXTERITY IN THE CREATION OF CERAMIC SCULPTURAL FORMS (SLO#1)**
  - Create three dimensional ceramic sculptural forms implementing basic hand building techniques.
  - Integrate knowledge of the properties, limitations and tendencies of the material, clay.
  - Produce structurally sound ceramic sculptural forms by executing appropriate designing and building techniques.
• Determine informed choices in color, texture, design and pattern in the basic application of glaze to bisqued sculptural forms.

• MANAGE THE ABILITY TO DISCUSS WORKS OF ART PUBLICLY (SLO#2)

• Utilize the basic vocabulary of ceramic art.

• Design standards to evaluate the aesthetic value of ceramic sculptural forms through guided discussion.

• Report observations regarding the aesthetic value and potential ceramic sculptural forms have to convey ideas, messages or social statements.

• Formulate questions pertaining to aspects of ceramic building techniques used, choice of materials, and firing process used in the creation of ceramic sculptural forms.

• STRUCTURE A HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT FOR SCULPTURAL CERAMIC FORMS (SLO#3)

• Examine and discuss historical, geographical, and cultural references in the evolution of contemporary ceramic sculptures.

• Correlate the aesthetic trends and stylistic devices apparent in examples of contemporary ceramic sculptures with those from various historical, geographic, and cultural sources.

• INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF "CRITIQUE" (SLO#4)

• Critique ceramic sculptural forms and discuss the decision making process used during the creation of those forms.

• Assess and evaluate the aesthetic attributes of ceramic sculptural forms.

• Evaluate the strength and clarity of any message or symbolism present in a ceramic sculptural form.

• Judge points of craftsmanship in ceramic sculptural forms at an elementary level.

• Examine and explore one's own artistic point of view through critique.

• CHOOSE AND APPLY A VARIETY OF INFORMATIONAL RESOURCES FOR RESEARCH (SLO#5)

• Incorporate information from museum/gallery trips, Internet research, library research and personal observation in the conceptualization of ceramic sculptural forms.

• Support and defend one's own observations and opinions regarding ceramic art forms.

ART 404 Intermediate Clay Sculpture

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ART 402 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is an intermediate class in ceramic sculpture techniques and methods. The class will include glazing, surface treatment and various firing processes used in clay sculpture. Focus will be placed on in-depth examination of contemporary ceramic sculpture.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• DEMONSTRATE PROFICIENT PHYSICAL SKILLS/DEXTERITY IN THE CREATION OF CERAMIC SCULPTURAL FORMS (SLO#1)

• Create three dimensional ceramic sculptural forms while exploring the technical and creative processes of ceramic sculpture building beyond the use of basic techniques.

• Integrate knowledge of the properties, limitations and tendencies of the material, clay

• Produce structurally sound ceramic sculptural forms by executing appropriate designing and building techniques.

• Integrate alternative glazing techniques that increase the opportunity to execute greater, more precise personalized expression.

• Systematize assemblage methods to achieve a higher degree of craftsmanship and aesthetics while creating ceramic sculptural forms.

• MANAGE THE ABILITY TO DISCUSS WORKS OF ART PUBLICLY (SLO#2)

• Utilize ceramic art terminology that reflects additional building, glazing, ornamentation, and firing techniques learned in the Intermediate Clay Sculpture class.

• Evaluate the aesthetics and presentation of sculptural forms commensurate with the Intermediate Clay Sculpture class.
Formulate questions pertaining to aspects of ceramic building techniques used, choice of materials, and the firing processes used in the creation of ceramic sculptural forms.

STRUCTURE A HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT FOR SCULPTURAL CERAMIC FORMS (SLO#3)

Examine and discuss historical, geographical, and cultural references in the evolution of contemporary ceramic sculptures.

Correlate the aesthetic trends and stylistic devices apparent in examples of contemporary ceramic sculptures with those from various historic, geographic, and cultural sources.

Incorporate culturally distinct motifs and ornamentation techniques in the development of one's own artistic statement.

INVESTIGATE SELF-ANALYSIS AND EXTERNAL ANALYSIS TECHNIQUES THROUGH THE ACTIVITY OF “CRITIQUE” (SLO#4)

Critique ceramic sculptural forms and discuss the decision making process used during the creation of those forms.

Assess and evaluate the aesthetic attributes of ceramic sculptural forms.

Evaluate the strength and clarity of any message or symbolism present in a ceramic sculptural form.

Judge points of craftsmanship in ceramic sculptural forms at a level beyond what is considered basic.

Examine and explore one's own artistic point of view through critique.

FORMULATE A CONCEPTUAL FRAMEWORK FOR THE FUTURE BY APPLYING ANALYTICAL SKILLS (SLO#5)

Research the factors involved with exhibiting in professional settings and/or establishing a personal ceramic studio.

Investigate criteria influencing competition juries and apply this to the conceptualization of projects.

Design projects and accompanying presentations for juried art competitions/professional exhibitions.

CHOOSE AND APPLY A VARIETY OF INFORMATIONAL RESOURCES FOR RESEARCH (SLO#6)

Incorporate information from museum/gallery trips, Internet research, library research and personal observation in the conceptualization of ceramic sculptural forms.

Support and defend one's own observations and opinions regarding ceramic art forms.

ART 430 Art and Children

This is a course that investigates the relationship of children and art emphasizing the three aspects of art: seeing and analyzing visual relationships, developing techniques of producing works of art, and exploring historical and contemporary art objects. The framework for developing art curriculum that is age and grade level appropriate will be outlined. Suggested for recreational leadership, preschool or elementary teachers, and caregivers. Field trips may be scheduled.

Upon completion of this course, the student will be able to:

CONSTRUCT A FRAMEWORK FOR AGE AND GRADE LEVEL APPROPRIATE ART CURRICULUM. SLO #1

Assemble a sequential plan for art education that utilizes appropriate visuals and artistic materials for specific groups of children in preschool and elementary programs.

Incorporate CA K-12 art standards in the art curriculum design.

Evaluate and apply various child development theories as they relate to the child's ability and artistic expression.

SYNTHESIZE ANALYTICAL SKILLS AND DEVELOP A CONCEPTUAL FRAMEWORK FOR DISCUSSING ART. SLO #2

Combine the concepts and language of visual art when analyzing or assessing art objects.

Generate an awareness of the historical, cultural and social uses of art.

DIFFERENTIATE COMMON ART MATERIALS AND THE VARIOUS APPLICATIONS AND TECHNIQUES FOR HANDLING THOSE MATERIALS. SLO #3
- Distinguish art materials for two-dimensional art (e.g. drawing, painting) and three-dimensional art (e.g. sculpture).
- Assess the appropriateness of materials and techniques to age-related projects.
- VALIDATE, SUPPORT AND DIRECT THE CREATIVE POTENTIAL OF THE CHILD. SLO #4
- Design a stimulating art program.
- Integrate a variety of motivational techniques as an impetus for developing creativity.

**ART 443 Art Gallery Operations**

- **Units:** 3
- **Hours:** 36 hours LEC; 54 hours LAB
- **Course Family:** Gallery Management
- **Prerequisite:** None.
- **Enrollment Limitation:** Two college art courses from art studio (ART) or art history (ARTH).
- **Transferable:** CSU
- **Catalog Date:** June 1, 2020

This first-semester course involves gallery preparation and maintenance as students learn gallery fundamentals in the visual arts. Included are experiences in planning and installing exhibitions, inventory and maintenance of art, participation in staffing and docent activities, and gallery and student outreach programs. A field trip to a museum or gallery is required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- DEVELOP ANALYTICAL SKILLS AND A CONCEPTUAL FRAMEWORK FOR THE FUTURE. SLO #1
- recognize and demonstrate an understanding of gallery procedures.
- assess and solve problems associated with displaying, cataloging, preserving and documenting works of art.
- plan and install exhibitions.
- differentiate the relationship between professional gallery and museum procedures and the artist whose work is exhibited, including preparing and analyzing professional artist's presentation portfolios.
- ANALYZE WORKS OF ART PUBLICLY. SLO #2
- relate to the public in a gallery setting and provide relevant information regarding the exhibition.
- distinguish and utilize terminology associated with the visual arts when discussing and writing about historical and contemporary works of art.
- CONSTRUCT AN HISTORICAL, GEOGRAPHICAL, AND CHRONOLOGICAL CONTEXT OF ART. SLO #3
- demonstrate knowledge of the cultural history of museum and gallery institutions.
- UTILIZE A VARIETY OF INFORMATIONAL SOURCES. SLO #4
- integrate practical knowledge and language learned in both art history and art studio courses to course content and projects.
- research appropriate information for each exhibition to develop marketing strategies, create resources for the viewer or organize public programs.

**ART 494 Topics in Art**

- **Units:** 0.5 - 4
- **Hours:** 36 hours LEC; 54 hours LAB
- **Prerequisite:** None.
- **Transferable:** CSU
- **Catalog Date:** June 1, 2020

This course is designed to give students an opportunity to study topics not included in current course offerings.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
Choose a variety of creative and planning approaches to developing visual ideas. SLO #1.

Integrate their knowledge and understanding of various medium through select projects. SLO #2.

Evaluate art work and assess the aesthetics of diverse medium. SLO #3.

ART 495 Independent Studies in Art

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
  - Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
  - Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
  - Use information resources to gather discipline-specific information.

- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
  - Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
  - Explain the importance of the major discipline of study in the broader picture of society.

- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
  - Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

- **SLO #4:** Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
  - Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

Art History (ARTH)

**ARTH 300 Introduction to Art**

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
C-ID: C-ID ARTH 100
Catalog Date: June 1, 2020

This is an overview of the visual arts including: drawing, sculpture, artifacts, architecture, painting, and printmaking. We will examine the materials, methods, and design principles of creating. This course is recommended as a basis for the understanding of art. Local field trips may be required.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- Formulate standards of judgement based upon reference to the history, purpose, and aesthetics of art (SLO #1).
- Differentiate art historical methodologies as well as historical periods and styles of art.
- Demonstrate an understanding of the materials and techniques in the production of art.
- Incorporate problem solving and analytical skills in completing class writing and art projects (SLO #2).
- Evaluate the basic visual and design elements in art utilizing art vocabulary and concepts.
- Apply knowledge from lectures in creating simple art objects.
- Manage the ability to discuss works of art publicly (SLO #3).
- Practice the visual analysis of art objects before an audience utilizing art vocabulary.
- Compare related art objects speaking clearly and using visual aids.
- Develop an appreciation for the arts and cultural practices of people from the past to the present (SLO #4).
- Understand art as a creative human expression found since humans exist.
- Identify common art themes in different global cultures.
- Choose and apply scholarly sources for research and express thoughts clearly in writing (SLO #5).
- Differentiate between scholarly and not scholarly sources.
- Practice writing about art in short essays and papers utilizing art vocabulary.

ARTH 303 Art Survey: Ancient to 14th Century

This course traces the developments in art from pre-historic times through the 14th Century. Emphasis will be given to artifacts, architecture, painting, and sculpture.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate an appreciation of artistic endeavors, cultural expressions, ideas and/or institutions through non-empirical, analytic, interpretive studies and critical thinking projects (SLO #1).
- Identify an array of art objects and monuments created from the pre-historic period to the 1300’s in Europe and the Near East.
- Manage the ability to discuss works of art publicly (SLO #2).
- Practice the visual analysis of art objects and monuments using art historical vocabulary.
- Compare related art objects or monuments from different periods and regions up to the 1300’s.
- Structure an historical, geographical and chronological context of art (SLO #3).
- Express clearly their own analyses and interpretations of arts, ideas, skills (including language), and/or institutions, and will properly use the vocabulary appropriate to the field (SLO #4).
- Compose a formal, iconographic, and functional analysis of objects and monuments within their social and historical contexts.
- Recognize the influence of culture, society and religion on art production and architecture.
- Recognize intercultural relations and influences of artistic themes and stylistic elements.
- Choose and apply a variety of scholarly sources for research and express thoughts clearly in writing (SLO #5).
• develop an appreciation for the arts and cultural practices of people of the past (SLO #6).

ARTH 307 Italian Renaissance Art

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGR 301 or 302
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
Catalog Date: June 1, 2020

This course introduces the visual arts and architecture of Italy in the Renaissance, from duecento (13th century) through cinquecento (16th century). Topics include the relationship between the visual arts and culture and artists and their works from the periods and styles known as the Proto-Renaissance, Renaissance, High Renaissance, and Mannerism. Relationships between Italy and other cultures, including New World civilizations, are also made.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify works of art and architecture in the Early Modern period, from the duecento (13th century) through the cinquecento (16th century) in Italy and related cultures (SLO #1)
• compare and contrast the characteristics of artistic styles common in the Early Modern period in Italy and related cultures (SLO #2)
• identify the main stylistic and formal components of visual arts in Italy in the periods of the Renaissance
• recognize intercultural influences and/or appropriation of art themes and stylistic elements.
• examine the relationship between the visual arts and the social, economic, and ideological environment of Italy during the Renaissance (SLO #3)
• detect the historic reasons why Italy has developed such works of art and architecture during this period.
• manage the ability to discuss works of art publicly (SLO #4).
• practice the visual analysis of art objects and monuments using art historical vocabulary.
• choose and apply a variety of scholarly sources for research and express thoughts clearly in writing (SLO #5).

ARTH 309 Art Survey: Renaissance to 19th Century

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGR 300 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
C-ID: Part of C-ID ARTH 120
Catalog Date: June 1, 2020

This course covers the architecture, sculpture, artifacts, painting and graphic art of world cultures, in particular of Western art from the Renaissance period through the 19th Century. This is a required class for art history major students.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate an appreciation of artistic endeavors, cultural expressions, ideas and/or institutions through non-empirical, analytic, interpretive studies and critical thinking projects (SLO #1).
• identify an array of art objects and monuments created in Europe and the United States in the period from 1400's (Renaissance) to the mid 1800's.
• identify important art objects and monuments created by non-Western cultures in the period from 1400's to the 1800's.
• manage the ability to discuss works of art publicly (SLO #2).
practice the visual analysis of art objects and monuments using art historical vocabulary.

- compare related art objects or monuments from different periods from early Renaissance to mid-19th century using visual aids.

- structure an historical, geographical and chronological context of art (SLO #3).

- identify the main stylistic and formal components of visual arts in Western Europe in the periods of Renaissance, Baroque, Rococo, Neoclassicism and Romanticism (1400- mid 1800's).

- express clearly personal analyses and interpretations of arts, ideas, techniques, skills, and/or institutions, and will properly use the vocabulary appropriate to the field (SLO #4).

- detect the reasons why cultures have created works of art and architecture.

- compose a formal, iconographic, and functional analysis of art objects and monuments within their social and historical contexts.

- recognize the influence of culture, society and religion on art production and architecture.

- recognize intercultural influences and/or appropriation of art themes and stylistic elements.

- choose and apply a variety of scholarly sources for research and express thoughts clearly in writing (SLO #5).

- develop an appreciation for arts and cultural practices of people of the past (SLO #6).

**ARTH 311 Art Survey: Modern Art**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1; IGETC Area 3A  
**C-ID:** C-ID ARTH 150; Part of C-ID ARTH 120  
**Catalog Date:** June 1, 2020

This course covers diverse art forms including painting, sculpture and architecture in Europe and America from the 19th, 20th, and 21st centuries. Styles discussed will include Neoclassicism, Romanticism, Realism, Impressionism, Post-Impressionism, Symbolism, Art Nouveau and all the major Modern art movements of the 20th century such as Fauvism, Cubism, Expressionism, Dada, Surrealism, American Modernism, Pop Art, Happenings, Conceptual and Installation Art. This class will also cover Post-Modernism, Neo-Expressionism, Video Installations, and Globalization. A field trip to an art museum is required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate an appreciation of artistic endeavors and cultural expressions through non-empirical, analytic, interpretive studies and critical thinking projects (SLO #1).

- display knowledge of the two major art periods of Modernism and Postmodernism and of the most significant artists of the period.

- develop an appreciation for the aesthetic principles and stylistic considerations that guide the creation of Modern and Postmodern art.

- engage in art discourse and employ critical thinking

- formulate an historical, geographical and chronological context of art (SLO #2).

- list an array of art objects and monuments created in the 19th, 20th, and 21st centuries in Europe, the United States and the rest of the world.

- explain the origins and development of art styles of the Avant-garde

- compare related art objects or monuments from different periods and countries.

- discuss works of art publicly (SLO #3).

- practice the visual analysis of art objects and monuments in oral presentations.

- express clearly their own analyses and interpretations of arts, ideas, techniques, skills, and institutions, and use the vocabulary appropriate to the field (SLO #4).

- compose a formal, iconographic, and functional analysis of art objects and monuments within their social and historical contexts and employ the vocabulary specific to the discipline of art history.

- evaluate the influence of culture, society, and technology on art production and architecture.
• demonstrate a basic understanding of the technical processes involved in the creation of art objects (e.g. fresco painting, engraving, photography, video installation, digital media, etc).

• identify intercultural relations, influences and appropriation of artistic themes and styles in the work of later artists.

• analyze the function and intention of art exhibitions, and the role of museums and art galleries.

• choose and apply a variety of scholarly sources for research and express thoughts clearly in writing (SLO #5).

• research an art history topic, synthesize the information, and write a research paper with footnotes and bibliography.

• develop an appreciation for the diversity and inclusiveness of contemporary artistic and cultural practices (SLO #6).

• evaluate the scope and variety of works of art.

• interpret art as expression of individual and human values within a technologically ever-changing, global society

ARTh 312 Women in Art

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C7; IGETC Area 3A
Catalog Date: June 1, 2020

This is a survey course of women's art from the Middle Ages to the present; including the art of both European and non-European cultures. ARTH 312 is presented through slide lecture and discussion which will include historical and cultural context, limitations imposed by society, and the differences and similarities of other artists in each period.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate an appreciation of artistic endeavors, cultural expressions, ideas and institutions of female artists (SLO #1).

• identify an array of art objects and/or buildings created by female artists

• express clearly orally and/or in writing an understanding of the value of art produced by women.

• recognize issues particular to the art production, education, training, and professional success of women artists

• structure an historical, geographical and chronological context of art works produced by female artists (SLO #2).

• recognize the development of female artistic production from the late Middle Ages to the present.

• identify art works by women artists from Western and non-Western cultures.

• exercise critical thinking in understanding the importance of gender in connection with patronage, economics, education and art production.

• develop awareness of the obstacles imposed by society, religion, and culture on the life and art of female artists.

• manage the ability to discuss works of art created by female artists publicly (SLO #3).

• practice the visual analysis of art objects using Art History vocabulary.

• compare stylistically related art objects by female artists to the art of contemporaneous male artists.

• interact and learn the dynamics of group work while creating joint projects.

• choose and apply a variety of scholarly sources for research and express thoughts clearly in writing (SLO #4).

• differentiate written and web sources particular to Feminist Art History and Women Studies and apply them in research

ARTh 324 Art of the Americas
This course focuses on the study of the indigenous arts and cultures of the Americas before the arrival of Columbus in the New World. Emphasis is on the Pre-Contact peoples of Meso-America and South America, such as the Aztec, Maya, and Inca cultures, and their contributions to colonial and modern art forms.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate an appreciation for the arts and cultures of Mesoamerica and South America. (SLO #1)
- identify the art and architecture of major American cultures including the Inca, Olmec, Maya and Aztec.
- recognize the distinctive contributions that indigenous cultures of the Americas have made to the contemporary culture of the Americas.
- relate pre-contact American art forms to the rest of the world in terms of material contribution.
- Formulate an historical, geographical and chronological context of American art. (SLO # 2)
- debate stylistic developments and discuss forms in the arts and architecture of various regions from ancient times to the post-contact eras.
- analyze social, philosophical, and cultural constructs and ideals in America as they are reflected in American art and architecture.
- Express clearly their own analyses and interpretations of arts, ideas, techniques, skills, and institutions, and use the vocabulary appropriate to the field. (SLO # 3)
- formulate and analyze meanings and functions of art objects and buildings.
- engage in formal analysis of art objects employing the vocabulary specific to the discipline of art history.
- demonstrate a basic understanding in the art media and the technical processes involved in the creation of art (woodcarving, basketry, ceramics, textiles etc).
- critique intercultural connections between pre-contact American and Western art and the resulted art forms of the post-contact era.
- Manage the ability to discuss works of art publicly. (SLO # 4)
- practice the visual analysis of art objects and monuments during oral presentations.
- associate the images of your chosen artwork to the art discussed in class.
- Choose and apply a variety of scholarly sources for research and express thoughts clearly in writing. (SLO # 5)
- research an art history topic on pre-contact American art or architecture using scholarly published and internet sources.
- synthesize the information and ideas and write a research paper with footnotes and bibliography.

ARTH 325 Native American Art History

This course studies the arts and culture of Native peoples of North America. It discusses the artistic traditions of native peoples of the Ancient and Eastern Woodlands, the Plains, the Southwest, California, the Northwest Coast, and the Arctic and Subarctic regions as well as examples of contemporary Native American art. Comparisons will be made between individual Native American cultures and between Native and Euro-centric cultures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- 3
- 54 hours LEC
- None.
- CSU; UC
- AA/AS Area I; AA/AS Area VI; CSU Area C3; IGETC Area 3A
- June 1, 2020
- Demonstrate an appreciation for the arts and traditions of the Native North Americans. (SLO #1)
- Identify the arts and architecture of major Native American cultures including the ancient cultures of the Hopewell, the Mississippian, the Anasazi, as well as later ones such as the Navajo, Cheyenne, Chumash, and Inuit.
- Enumerate the wide variety of Native American cultures.
- Formulate an historical, geographical and chronological context of Native American art. (SLO # 2)
- Discuss forms in the arts and architecture of various regions of North America from the ancient to contemporary times.
- Debate stylistic developments from the ancient to contemporary times.
- Critique and analyze the contribution of Native American artists in contemporary arts.
- Express clearly their own analyses and interpretations of arts, ideas, techniques, skills, and institutions, and use the vocabulary appropriate to the field. (SLO # 3)
- Formulate and analyze meaning and purpose of art objects and buildings.
- Demonstrate a basic understanding in the material and the technical processes involved in the creation of art (woodcarving, basketry, ceramics, textiles etc).
- Contrast and critique the artistic products of Native cultures with more Eurocentric cultures.
- Manage the ability to discuss works of art publicly. (SLO # 4)
- Practice the visual analysis of art objects and monuments during oral presentations.
- Examine and place the art objects in its cultural and social context.
- Compare the images of your chosen art objects to those made by other Native cultures.
- Apply a variety of scholarly sources for research and express thoughts clearly in writing. (SLO # 5)
- Synthesize the information and ideas from your research and write a paper with footnotes and bibliography.

**ARTH 328 Survey of African Art**

**Units:** 3

**Hours:** 54 hours LEC

**Prerequisite:** None.

**Transferable:** CSU; UC

**General Education:** AA/AS Area I; AA/AS Area VI; CSU Area C1; CSU Area C2; IGETC Area 3A; IGETC Area 3B

**Catalog Date:** June 1, 2020

This course is an introduction to the art and architecture of Africa in terms of its cultural and philosophical background; its materials and techniques; its aesthetic considerations; and its impact on 20th Century Western art.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate an appreciation for the arts and cultures of Africa. (SLO #1)
- Identify the art and architecture of major African cultures including ancient Egypt and Nubia, Ife, or Benin.
- Relate African art forms to the rest of the world in terms of material contribution.
- Formulate an historical, geographical and chronological context of African art. (SLO # 2)
- Differentiate between art and architecture of different geographic regions such as the Mediterranean, Sub-Saharan, tropics etc.
- Discuss art forms and stylistic developments in the arts and architecture of various regions of Africa from ancient times to the 20th century.
- Express clearly their own analyses and interpretations of arts, ideas, techniques, skills, and institutions, and use the vocabulary appropriate to the field. (SLO # 3)
- Formulate and analyze meanings and functions of art forms throughout Africa.
engage in formal analysis of art objects employing the vocabulary specific to the discipline of art history.

demonstrate a basic understanding in the media and the technical processes involved in the creation of art objects (woodcarving, basketry, ceramics, textiles etc).

critique intercultural connections between African and Western art, in particular the impact of African art on 20th century Western art.

manage the ability to discuss works of art publicly. (SLO # 4)

practice the visual analysis of art objects and monuments during oral presentations.

compare the images of your chosen artwork to those discussed in class.

Choose and apply a variety of scholarly sources for research and express thoughts clearly in writing. (SLO # 5)

research an art history topic on African art or architecture using scholarly published and internet sources.

synthesize the information and write a research paper with footnotes and bibliography.

**ARTH 332 Asian Art**

**Units:** 3

**Hours:** 54 hours LEC

**Prerequisite:** None.

**Advisory:** ENGWR 300 with a grade of "C" or better

**Transferable:** CSU; UC

**General Education:** AA/AS Area I; AA/AS Area VI; CSU Area C; IGETC Area 3A

**C-ID:** C-ID ARTH 130

**Catalog Date:** June 1, 2020

This course is an introduction to and comparative survey of the major forms and trends in the arts, architecture and artifacts of Asia from the Neolithic to the contemporary. The role of secular and religious ideas and ideals are examined, the similarities and differences among the cultures are assessed and the contributions to world culture will be appraised to create understanding, appreciation and tolerance. A regional or local field trip may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- structure an historical, geographical and chronological context of art (SLO #1).
- differentiate stylistically among the arts of various regions of Asia, such as India, Southeast Asia, China and Japan, from antiquity to 1900.
- recognize the affect of Asian art and culture within contemporary global cultures.
- demonstrate an appreciation of artistic endeavors, cultural expressions, ideas and/or institutions through non-empirical, analytic, interpretive studies and critical thinking projects (SLO #2).
- reflect on the influence of culture, society philosophy and religion of a region upon art production and architecture.
- recognize and exercise critical thinking in cultural co-relationships and influences between Asian countries/regions but also between Asia and the West.
- apply a variety of scholarly sources for research within clearly written communication.
- recognize intercultural relations and influences of art themes and styles.
- manage the ability to discuss works of art publicly (SLO #3).
- discuss and clearly present observations of the form, style, and content within a range of works of art.
- analyze and interpret art based on the history, religion and ideology of Asian countries and properly use the vocabulary appropriate to the field.

**ARTH 333 Introduction to Islamic Art**
This is a survey course that studies works of art and architecture produced by artists of Muslim countries and regions from the period of the early caliphates (c. 700) to the heights of the Islamic empires (c. 1700.) It provides fundamental information on the formation of Islamic art, its history and philosophy but also deals with the relationships between the Islamic, Asian, and Western artistic traditions. This course includes but is not limited to visual examples from the Middle East, Iran, India, North Africa and Spain.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate an awareness of the definition of "Islamic art"; detect and discuss the stereotyping challenges of the study of Islamic art (SLO #1).
- recognize and analyze the influential elements in the formation of Islamic art and assess the social and historical backdrop against which Islamic art flourished (SLO #2).
- identify the Biblical connections that trace Islam back to the other two Abrahamic traditions and their visual expression in art and architecture.
- recognize the principles of the Islamic faith and assess their direct impact on specific examples of art and architecture (e.g. the creation of the prayer niche or Mihrab).
- discuss the development of Islamic dynastic rules and their contribution to the Islamic culture; identify main schools of thought within the religion and analyze their impact on the building and expansion of empires and on their artistic production.
- evaluate the more unorthodox approach within the Islamic faith and its influence on the development of Islamic art and architecture through the conception of its own symbolic language (e.g. Sufi mystic dances, and the establishing of the Sufi sanctuaries).
- analyze examples of religious and secular architecture, and identify the different elements in the building plans and their functions, as well as their decorative elements (SLO #3).
- compare regional stylistic changes and periods to reveal artistic innovations.
- discuss the issue of patronage, limitations that regulated the artistic production, formation of guilds and religious endowments.
- incorporate the concept of methodology as it applies to the visual arts, particularly with respect to the Western vision of the Islamic east, "Orientalism," and the role of colonialism.
- demonstrate knowledge of the various types of books produced as well as types of visual arts involved such as calligraphy and book illumination (SLO #4).
- analytically address the issues of "figurative" and "non-figurative" art within the various regions impacted by Islam.
- recognize the importance of the development of libraries.
- assess the mutual impact of Islam and other cultures (SLO #5).
- examine similarities and difference reflected in the artwork produced in Asia and identify the Islamic and Asian elements.
- evaluate examples of art within Western traditions, specifically that of Christianity and Judaism, and identify the elements of mutual appropriation in their visual art.
- incorporate the concept of methodology as it applies to the visual arts, particularly with respect to the Western vision of the Islamic east, "Orientalism," and the role of colonialism.
- choose and apply a variety of scholarly sources for research and express thoughts clearly in writing (SLO #6).
- manage the ability to discuss works of art publicly (SLO #7).
- practice the visual analysis of Islamic art and architecture using art historical vocabulary.
Automotive Mechanics Technology
| Cosumnes River College

The Automotive Mechanics Technology program emphasizes developing skills required for efficient diagnosis, maintenance, and repair of the automobile and its components. This program and its instructors are Automotive Service Excellence (ASE) certified. The college offers both theoretical and practical training relating to all phases of the automobile.

Dean
 (916) 691-4300

Associate Degrees

A.S. in Automotive Mechanics Technology (Ford ASSET)

The Ford Automotive Student Service Education Training (ASSET) Program is a two-year Associate's Degree program in Automotive Mechanics Technology. This program is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair all major systems of the automobile.

The Ford ASSET Program is a partnership between Cosumnes River College (CRC) and Ford Motor Company. Ford ASSET is the only program that includes an in dealership cooperative work experience component. Students will rotate between school and the dealership for the duration of the two-year program, giving them invaluable hands-on experience while they learn.

Courses within the Ford ASSET program allow students to earn Service Technician Specialty Training (STST) certifications from Ford Motor Company in the following areas:
• Electrical Systems
• Brake Systems
• Steering & Suspension
• Climate Control
• Automatic Transmissions
• Gasoline Engine Repair
• Gasoline Engine Performance
• Diesel Engine Repair
• Diesel Engine Performance
• Manual Transmissions

Instructors for this program are Ford STST certified as required by Ford Motor Company standards.

Completion of this degree also represents completion of a National Automotive Technicians Education Foundation (NATEF) accredited Master Automotive Service Technology (MAST) program. Instructors for this program are Automotive Service Excellence (ASE) certified as required by NATEF standards.

Upon successful completion of this program, students are well qualified for placement as service technicians in Ford and/or Lincoln dealerships. Students may apply units earned by the successful completion of this program to one or more of the specialized certificates as well as the Associate's degree.

Catalog Date: June 1, 2020

**First Year - Spring Semester:**

| AMT 374     | Ford ASSET Automotive Suspension and Steering                  | 3     |
| AMT 375     | Ford ASSET Automotive Wheel Alignment                          | 3     |
| AMT 376     | Ford ASSET Automotive Heating and Air Conditioning             | 3     |
|             | A minimum of 3 units from the following:                       |       |
| AMT 498     | Work Experience in Automotive Mechanics Technology (1 - 4)     | 3     |

**First Year - Summer Semester:**

| AMT 378     | Ford ASSET Automatic Transmissions/Transaxles                  | 3     |
| AMT 130     | Ford ASSET Advanced Automatic Transmission Diagnosis           | 1.5   |
| AMT 379     | Ford ASSET Automotive Engine Repair                            | 3     |
| AMT 385     | Ford ASSET Automotive Manual Drive Train and Axles             | 1.5   |

**Second Year - Fall Semester:**

| AMT 381     | Ford ASSET Electronic Engine Control                           | 4     |
| AMT 382     | Ford ASSET Gasoline Engine Performance                         | 3     |
| AMT 383     | Ford ASSET Advanced Gasoline Engine Performance                | 3     |
|             | A minimum of 3 units from the following:                       |       |
| AMT 498     | Work Experience in Automotive Mechanics Technology (1 - 4)     | 3     |

**Second Year - Spring Semester:**

| AMT 131     | Ford ASSET Diesel Engine Performance                           | 3     |
| AMT 340     | Emission Control Inspection and Repair                         | 5     |
| WELD 160    | Welding Technology for the Automotive Industry                 | 1.5   |
|             | A minimum of 3 units from the following:                       |       |
| AMT 498     | Work Experience in Automotive Mechanics Technology (1 - 4)     | 3     |

**Total Units:** 59.5

The Automotive Mechanics Technology (Ford ASSET) Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Eligibility for ENGWR 101.
- Eligibility for MATH 100.
- Possess a valid driver's license with a driving record that is suitable for the sponsoring dealership's insurance requirements.
- Able to operate a vehicle equipped with a manual transmission.
- Meet sponsoring dealership hiring requirements which may include submitting to a drug test and/or criminal background check.
Completion of an application for the Ford ASSET Program (can be found at http://www.crc.losrios.edu/cars).

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Students are selected from the applicant pool in the order in which they are received.
- Only students who meet the stated eligibility requirements will be considered for the program.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO 1: Understand the fundamental purpose, components, and operation of major automotive systems to include gasoline engines, automatic transmissions and transaxles, manual transmissions, drive trains, and axles, suspension and steering systems, brake systems, electrical and electronic systems, heating and air conditioning systems, and engine performance systems.
- PSLO 2: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
- Understand typical new car dealership hierarchy, structure, and standard procedures.
- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.
- PSLO 3: Diagnose engine mechanical concerns, conduct diagnostic testing procedures, and perform the procedures and techniques involved in typical engine repairs and overhauls.
- PSLO 4: Demonstrate the ability to diagnose, service, and repair automatic transmissions and transaxles.
- PSLO 5: Demonstrate the ability to diagnose and repair manual transmissions, transaxles, and drive train concerns.
- PSLO 6: Demonstrate the ability to diagnose and repair automotive suspension and steering concerns.
- PSLO 7: Demonstrate the ability to diagnose and repair automotive brake systems.
- PSLO 8: Demonstrate the ability to diagnose and repair automotive electrical and electronic concerns.
- PSLO 9: Demonstrate the ability to diagnose and repair automotive heating, ventilation, and air conditioning (HVAC) system concerns.
- PSLO 10: Demonstrate the ability to diagnose, service, and repair gasoline engine performance systems and their components.
- Verify the outcome of the repair through a test drive analysis or system self-test.

Career Information

- Automotive Technician • Light Duty Diesel Technician • Ford/Lincoln Specialized Technician (in any of the Service Technician Specialty Training [STST] areas) • Ford/Lincoln Engine Master Technician • Ford/Lincoln Chassis Master Technician • Ford/Lincoln Drivetrain Master Technician • Ford/Lincoln Senior Master Technician Students who successfully complete the program will: • Earn an Associate’s degree in Automotive Mechanics Technology. • Be granted Ford Service Technician Specialty Training (STST) credentials. • Be prepared for Automotive Service Excellence (ASE) certification in all Automobile series areas. • Be eligible to sit for testing for both the California SMOG Inspector and SMOG Repair licenses.

A.S. in Automotive Mechanics Technology

This program emphasizes developing skills required for efficient diagnosis, maintenance, and repair of the automobile and its components. Completion of this degree also represents completion of a National Automotive Technicians Education Foundation (NATEF) accredited Master Automotive Service Technology (MAST) program. Instructors for this program are Automotive Service Excellence (ASE) certified as required by NATEF standards.

Upon successful completion of the program, students are qualified for placement as technicians in the automotive industry. Students may apply units earned by successful completion of Automotive Mechanics Technology courses to one or more of the specialized certificates and/or the Associate Degree in Automotive Mechanics Technology.

Total Units: 43

The Automotive Mechanics Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **PSLO 1**: Understand the fundamental purpose, components, and operation of major automotive systems to include gasoline engines, automatic transmissions and transaxles, manual transmissions, drivetrains, and axles, suspension and steering systems, brake systems, electrical and electronic systems, heating and air conditioning systems, and engine performance systems.

- **PSLO 2**: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
• Understand typical automotive shop hierarchy, structure, and standard procedures.

• Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.

• PSLO 3: Diagnose engine mechanical concerns, conduct diagnostic testing procedures, and perform the procedures and techniques involved in typical engine repairs and overhauls.

• PSLO 4: Demonstrate the ability to diagnose, service, and repair automatic transmissions and transaxles.

• PSLO 5: Demonstrate the ability to diagnose and repair manual transmissions, transaxles, and drive train concerns.

• PSLO 6: Demonstrate the ability to diagnose and repair automotive suspension and steering concerns.

• PSLO 7: Demonstrate the ability to diagnose and repair automotive brake systems.

• PSLO 8: Demonstrate the ability to diagnose and repair automotive electrical and electronic concerns.

• PSLO 9: Demonstrate the ability to diagnose and repair automotive heating, ventilation, and air conditioning (HVAC) system concerns.

• PSLO 10: Demonstrate the ability to diagnose, service, and repair gasoline engine performance systems and their components.

• Verify the outcome of the repair through a test drive analysis or system self-test.

Career Information

Auto Technician; Auto/Truck Specialist; Automotive Microcomputer Programmer & Operator; Field Service/Sales Representative; Inventory Controls Manager; Tune-up & Electrical Specialist. ASE certified in the areas of Brakes, Electrical/Electronic Systems, Engine Performance, Suspension and Steering, Automatic Transmission/Transaxle, Engine Repair, Heating and Air Conditioning, and Manual Drive Train and Axles.

Courses in the general automotive program are designed to emphasize skills development in efficient diagnosis, maintenance, and repair of the automobile. A wide variety of makes and models of vehicles are used in laboratory practice. Students can enter the General Program in Automotive Mechanics Technology at any semester, summer, fall, or spring. Certificate programs as well as an A.S. degree in Automotive Mechanics Technology are available.

Certificates of Achievement

Automatic Transmissions and Transaxles Certificate

The curriculum is designed for students interested in seeking employment in the diagnosis and repair of automatic transmissions/transaxles.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• Identify components and systems that require periodic inspection and/or maintenance.

• Explain the proper use of service publications used in diagnostic procedures.

• Recognize electronic principles and how they relate to particular automotive systems.

• Perform the necessary repair procedure for a certain set electrical/electronic diagnostic problems.
Understand the operation of clutches, manual transmissions, transaxles, transfer cases, drive shafts, and axle assemblies (powertrain).

Demonstrate the ability to diagnose manual powertrain concerns.

Understand theory and operation of automatic transmissions/transaxles.

Demonstrate the ability to repair automatic transmissions/transaxles.

Automatic Transmissions/Transaxles (Ford ASSET) Certificate

This certificate represents a subset of the Ford Automotive Student Service Education Training (ASSET) Program and is intended for students wishing to specialize in automatic transmissions and transaxles. This certificate is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair automatic transmissions and transaxles.

Catalog Date: June 1, 2020

Total Units: 14.5

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Eligibility for ENGWR 101.
- Eligibility for MATH 100.
- Possess a valid driver's license with a driving record that is suitable for the sponsoring dealership's insurance requirements.
- Able to operate a vehicle equipped with a manual transmission.
- Meet sponsoring dealership hiring requirements which may include submitting to a drug test and/or criminal background check.
- Completion of an application for the Ford ASSET Program (can be found at http://www.crc.losrios.edu/cars).

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Students are selected from the applicant pool in the order in which they are received.
- Only students who meet the stated eligibility requirements will be considered for the program.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- SLO 1: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
• Understand typical new car dealership hierarchy, structure, and standard procedures.
• Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.
• SLO 2: Understand the fundamental purpose, components, and operation of automatic transmissions and transaxles.
• SLO 3: Demonstrate the ability to diagnose, service, and repair automatic transmissions and transaxles.
• Verify the outcome of the repair through a test drive analysis or system self-test.

Career Information

• Automotive Maintenance / Light Repair Technician • Automatic Transmission Technician • Ford/Lincoln Specialized Technician (in Service Technician Specialty Training [STST] area 37-Automatic Transmissions)

Automotive Brakes (Ford ASSET) Certificate

This certificate represents a subset of the Ford Automotive Student Service Education Training (ASSET) Program and is intended for students wishing to specialize in automotive brake systems. This certificate is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair automotive brake systems.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Describe the fundamentals of automotive systems to include engine operation and repair, automatic transmissions/transaxles, manual drive train and axles, suspension and steering, brakes, electrical and electronic systems, heating and air conditioning, and engine performance.
- Describe the fundamentals of diagnosing automotive systems.
- Explain how to perform fundamental diagnostic procedures as outlined in manufacture service publications.
- Describe the theory and operation of Automotive Electrical/Electronic Systems.
- Recall and apply step-by-step diagnostic procedures.
- Repair automotive electrical/electronic systems relating to Brake Systems.
- Understand theory and operation of automotive brake systems.
- Explain the operation of conventional, anti-lock, traction control and electronic stability assist brake systems.
- Demonstrate the ability to repair automotive brake systems.
- Explain theory and operations of automotive computerized controls.
Perform inspection, testing, disassembly, component replacement, reassembly, and confirmation of repair on automotive computerized control systems.

Automotive Electrical Systems (Ford ASSET) Certificate

This certificate represents a subset of the Ford Automotive Student Service Education Training (ASSET) Program and is intended for students wishing to specialize in automotive electrical systems. This certificate is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair automotive electrical systems.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Describe the fundamentals of automotive systems to include engine operation and repair, automatic transmissions/transaxles, manual drive train and axles, suspension and steering, brakes, electrical and electronic systems, heating and air conditioning, and engine performance.
- Explain how to perform fundamental diagnostic procedures as outlined in manufacture service publications.
- Describe the theory and operation of Automotive Electrical/Electronic Systems.
- Perform the necessary repair procedure for a certain set electrical/electronic diagnostic problems.
- Describe the theory and the operation of automotive ignition systems.
- Apply test procedures on automotive ignition systems and components
- Describe the theory and operation of Electronic Control Systems.
- Diagnose automotive electronic control system concerns.
- Explain the relationships between input sensors, processing and output sensors.
- Perform the necessary repair procedures for a certain set of automotive computerized control diagnostic problems.

Automotive Emission Control Certificate

This curriculum is designed for students who are interested in seeking employment in the inspection, diagnosis, and/or repair of automotive emission control systems. Students completing this program may be eligible to pursue licensing as a California SMOG Check Inspector and/or California SMOG Check Repair Technician.

Catalog Date: June 1, 2020

\(^1\)A current advanced emission control smog license will meet the requirement for AMT 340. ASE (Automotive Service Excellence) Certification in A6, A8, and L1 will meet requirements for AMT 303, 310, 332. No units will be earned for requirements met through licensing or certification exams. In these cases fewer total units are required.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Recognize electronic principles and how they relate to particular automotive systems.
- Diagnose automotive engine performance concerns.
- Demonstrate the ability to diagnose electronic fuel injection.
- Diagnose automotive computerized control concerns.
- Identify the fundamentals of automotive emission systems to include electrical, vacuum, computerized vehicle emission components, emission regulations, emission testing, emission reduction systems, and emission inspection/diagnostic equipment.

Automotive Engine Performance (Ford ASSET) Certificate

This certificate represents a subset of the Ford Automotive Student Service Education Training (ASSET) Program and is intended for students wishing to specialize in gasoline engine performance systems. This certificate is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair gasoline engine performance systems.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Eligibility for ENGWR 101.
- Eligibility for MATH 100.
- Possess a valid driver’s license with a driving record that is suitable for the sponsoring dealership’s insurance requirements.
Able to operate a vehicle equipped with a manual transmission.
Meet sponsoring dealership hiring requirements which may include submitting to a drug test and/or criminal background check.
Completion of an application for the Ford ASSET Program (can be found at http://www.crclosrios.edu/cars).

Enrollment Process
Eligible students are selected for the program according to the following steps:

- Students are selected from the applicant pool in the order in which they are received.
- Only students who meet the stated eligibility requirements will be considered for the program.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- SLO 1: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
- Demonstrate the use of special tools necessary to repair gasoline engine performance systems and their components.
- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.
- SLO 2: Understand the fundamental purpose, components, and operation of gasoline engine performance systems.
- SLO 3: Demonstrate the ability to diagnose, service, and repair gasoline engine performance systems and their components.
- Verify the outcome of the repair through a test drive analysis or system self-test.

Career Information
- Automotive Technician (Drivability Specialist) • Ford/Lincoln Specialized Technician (in Service Technician Specialty Training [STST] area 31-Gasoline Engine Performance)

Automotive Engine Performance Certificate
This curriculum is designed for students who are interested in seeking employment in the inspection, maintenance, diagnosis, and repair of automotive engine performance systems.

Catalog Date: June 1, 2020

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- Recognize electronic principles and how they relate to particular automotive systems.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Repair automotive engine performance systems.
- Describe theory and the operation of automotive ignition systems.
- Diagnose automotive electronic control system concerns.
- Diagnose engine mechanical concerns and conduct diagnostic testing procedures.
- Understand theory and operation of electronic fuel injection.
- Perform the necessary repair procedures for a certain set of automotive computerized control diagnostic problems.
- Identify the fundamentals of automotive emission systems to include electrical, vacuum, computerized vehicle emission components, emission regulations, emission testing, emission reduction systems, and emission inspection/diagnostic equipment.

Automotive Engine Repair (Ford ASSET) Certificate
This certificate represents a subset of the Ford Automotive Student Service Education Training (ASSET) Program and is intended for students wishing to specialize in automotive engine repair. This certificate is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair automotive engines.

Catalog Date: June 1, 2020

Enrollment Eligibility
To be eligible for enrollment in the program, the student must meet the following criteria:

- Eligibility for ENGWR 101.
- Eligibility for MATH 100.
- Possess a valid driver’s license with a driving record that is suitable for the sponsoring dealership’s insurance requirements.
- Able to operate a vehicle equipped with a manual transmission.
- Meet sponsoring dealership hiring requirements which may include submitting to a drug test and/or criminal background check.
- Completion of an application for the Ford ASSET Program (can be found at http://www.crc.losrios.edu/cars).

Enrollment Process
Eligible students are selected for the program according to the following steps:
Students are selected from the applicant pool in the order in which they are received.

Only students who meet the stated eligibility requirements will be considered for the program.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- SLO 1: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
- Understand typical new car dealership hierarchy, structure, and standard procedures.
- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.
- SLO 2: Understand the fundamental purpose, components, and operation of automotive engines.
- SLO 3: Diagnose engine mechanical concerns, conduct diagnostic testing procedures, and perform the procedures and techniques involved in typical engine repairs and overhauls.
- Verify the outcome of the repair through a test drive analysis or system self-test.

**Career Information**

- Automotive Technician (Engine Repair Specialist) • Ford/Lincoln Specialized Technician (in Service Technician Specialty Training [STST] area 32-Gasoline Engine Repair)

**Automotive Engine Repair Certificate**

This curriculum is designed for students interested in seeking employment in the engine overhaul and engine repair field.

**Catalog Data:** June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Describe the fundamentals of diagnosing automotive systems.
- Explain the proper use of service publications used in diagnostic procedures.
- Recognize electronic principles and how they relate to particular automotive systems.
- Perform the necessary repair procedure for a certain set electrical/electronic diagnostic problems.
- Understand the basic operation of automotive air conditioning (A/C) and engine cooling systems.
- Repair automotive air conditioning (A/C) and cooling systems.

Automotive Mechanics Technology (Ford ASSET) Certificate

The Ford Automotive Student Service Education Training (ASSET) Program is a two-year program in Automotive Mechanics Technology. This program is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair all major systems of the automobile.

The Ford ASSET Program is a partnership between Cosumnes River College (CRC) and Ford Motor Company. Ford ASSET is the only program that includes an in dealership cooperative work experience component. Students will rotate between school and the dealership for the duration of the two-year program, giving them invaluable hands-on experience while they learn.
Courses within the Ford ASSET program allow students to earn Service Technician Specialty Training (STST) certifications from Ford Motor Company in the following areas:

- Electrical Systems
- Brake Systems
- Steering & Suspension
- Climate Control
- Automatic Transmissions
- Gasoline Engine Repair
- Gasoline Engine Performance
- Diesel Engine Repair
- Diesel Engine Performance
- Manual Transmissions

Instructors for this program are Ford STST certified as required by Ford Motor Company standards.

Completion of this certificate also represents completion of a National Automotive Technicians Education Foundation (NATEF) accredited Master Automotive Service Technology (MAST) program. Instructors for this program are Automotive Service Excellence (ASE) certified as required by NATEF standards.

Upon successful completion of this program, students are well qualified for placement as service technicians in Ford and/or Lincoln dealerships. Students may apply units earned by the successful completion of this program to one or more of the specialized certificates as well as the Associate’s degree.

**Catalog Date:** June 1, 2020

To be eligible for enrollment in the program, the student must meet the following criteria:

- Eligibility for ENGWR 101.
- Eligibility for MATH 100.
- Possess a valid driver’s license with a driving record that is suitable for the sponsoring dealership’s insurance requirements.
- Able to operate a vehicle equipped with a manual transmission.
- Meet sponsoring dealership hiring requirements which may include submitting to a drug test and/or criminal background check.
- Completion of an application for the Ford ASSET Program (can be found at http://www.crc.losrios.edu/cars).

Eligible students are selected for the program according to the following steps:

- Students are selected from the applicant pool in the order in which they are received.
- Only students who meet the stated eligibility requirements will be considered for the program.

Upon completion of this program, the student will be able to:

- PSLO 1: Understand the fundamental purpose, components, and operation of major automotive systems to include gasoline engines, automatic transmissions and transaxles, manual transmissions, drivetrains, and axles, suspension and steering systems, brake systems, electrical and electronic systems, heating and air conditioning systems, and engine performance systems.
- PSLO 2: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
- Understand typical new car dealership hierarchy, structure, and standard procedures.
- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.
- PSLO 3: Diagnose engine mechanical concerns, conduct diagnostic testing procedures, and perform the procedures and techniques involved in typical engine repairs and overhauls.
- PSLO 4: Demonstrate the ability to diagnose, service, and repair automatic transmissions and transaxles.
- PSLO 5: Demonstrate the ability to diagnose and repair manual transmissions, transaxles, and drive train concerns.
- PSLO 6: Demonstrate the ability to diagnose and repair automotive suspension and steering concerns.
- PSLO 7: Demonstrate the ability to diagnose and repair automotive brake systems.
- PSLO 8: Demonstrate the ability to diagnose and repair automotive electrical and electronic concerns.
- PSLO 9: Demonstrate the ability to diagnose and repair automotive heating, ventilation, and air conditioning (HVAC) system concerns.
- PSLO 10: Demonstrate the ability to diagnose, service, and repair gasoline engine performance systems and their components.
- Verify the outcome of the repair through a test drive analysis or system self-test.
• Automotive Technician • Light Duty Diesel Technician • Ford/Lincoln Specialized Technician (in any of the Service Technician Specialty Training [STST] areas) • Ford/Lincoln Engine Master Technician • Ford/Lincoln Chassis Master Technician • Ford/Lincoln Drivetrain Master Technician • Ford/Lincoln Senior Master Technician

Students who successfully complete the program will: • Earn a certificate in Automotive Mechanics Technology. • Be granted Ford Service Technician Specialty Training (STST) credentials. • Be prepared for Automotive Service Excellence (ASE) certification in all Automobile series areas. • Be eligible to sit for testing for both the California SMOG Inspector and SMOG Repair licenses.

Automotive Mechanics Technology Certificate

This one-year curriculum is designed for students who are seeking basic job entry skills for employment in the automotive field. Subsequent certificates and/or an Associate degree in Automotive Mechanics Technology can be earned without the need to repeat courses completed as part of this certificate. Completion of this certificate also represents completion of a National Automotive Technicians Education Foundation (NATEF) accredited Master Automotive Service Technology (MAST) program. Instructors for this program are Automotive Service Excellence (ASE) certified as required by NATEF standards.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- **PSLO 1**: Understand the fundamental purpose, components, and operation of major automotive systems to include gasoline engines, automatic transmissions and transaxles, manual transmissions, drivetrains, and axles, suspension and steering systems, brake systems, electrical and electronic systems, heating and air conditioning systems, and engine performance systems.

- **PSLO 2**: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.

- Understand typical automotive shop hierarchy, structure, and standard procedures.

- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.

- **PSLO 3**: Diagnose engine mechanical concerns, conduct diagnostic testing procedures, and perform the procedures and techniques involved in typical engine repairs and overhauls.

- **PSLO 4**: Demonstrate the ability to diagnose, service, and repair automatic transmissions and transaxles.

- **PSLO 5**: Demonstrate the ability to diagnose and repair manual transmissions, transaxles, and drive train concerns.

- **PSLO 6**: Demonstrate the ability to diagnose and repair automotive suspension and steering concerns.

- **PSLO 7**: Demonstrate the ability to diagnose and repair automotive brake systems.

- **PSLO 8**: Demonstrate the ability to diagnose and repair automotive electrical and electronic concerns.

- **PSLO 9**: Demonstrate the ability to diagnose and repair automotive heating, ventilation, and air conditioning (HVAC) system concerns.

- **PSLO 10**: Demonstrate the ability to diagnose, service, and repair gasoline engine performance systems and their components.

- Verify the outcome of the repair through a test drive analysis or system self-test.

### Career Information

Auto Technician; Auto/Truck Specialist; Automotive Microcomputer Programmer & Operator; Field Service/Sales Representative; Inventory Controls Manager; Tune-up & Electrical Specialist. ASE certified in the areas of Brakes, Electrical/Electronic Systems, Engine Performance, Suspension and Steering, Automatic Transmission/Transaxle, Engine Repair, Heating and Air Conditioning, and Manual Drive Train and Axles.

### Automotive Suspension and Steering (Ford ASSET) Certificate

This certificate represents a subset of the Ford Automotive Student Service Education Training (ASSET) Program and is intended for students wishing to specialize in automotive suspension and steering systems. This certificate is designed to help students develop the skills necessary to efficiently and accurately maintain, diagnose, and service/repair automotive suspension and steering systems.

### Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Eligibility for ENGWR 101.
Eligibility for MATH 100.

- Possess a valid driver's license with a driving record that is suitable for the sponsoring dealership's insurance requirements.
- Able to operate a vehicle equipped with a manual transmission.
- Meet sponsoring dealership hiring requirements which may include submitting to a drug test and/or criminal background check.
- Completion of an application for the Ford ASSET Program (can be found at http://www.crc.losrios.edu/cars).

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Students are selected from the applicant pool in the order in which they are received.
- Only students who meet the stated eligibility requirements will be considered for the program.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- SLO 1: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
- Understand typical new car dealership hierarchy, structure, and standard procedures.
- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.
- SLO 2: Understand the fundamental purpose, components, and operation of automotive suspension and steering systems.
- SLO 3: Demonstrate the ability to diagnose and repair automotive suspension and steering systems.
- Verify the outcome of the repair through a test drive analysis or system self-test.

Career Information

- Automotive Maintenance / Light Repair Technician
- Ford/Lincoln Specialized Technician (in Service Technician Specialty Training [STST] area 33-Steering and Suspension)

Automotive Suspension and Steering Certificate

This curriculum is designed for students interested in seeking employment in the automotive suspension, steering, or wheel alignment fields.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Recognize electronic principles and how they relate to particular automotive systems.
- Perform the necessary repair procedure for a certain set electrical/electronic diagnostic problems.
- Diagnose small engine operation concerns.
- Assess and repair small engine systems.
- Understand theory and operation of electronic fuel injection.
- Demonstrate the ability to repair electronic fuel injection systems.

Automotive Mechanics Technology (AMT)

AMT 101 Bureau of Automotive Repair (BAR) Emissions Update

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: Individuals taking this course should have a current or expired California Smog Check Inspection and/or Repair License.
Catalog Date: June 1, 2020
This Bureau of Automotive Repair (BAR) Emissions Update Course is an 18 hour course which meets the mandatory bi-annual educational update requirement for license renewal of Emission Repair technicians in the State of California. Technicians may take this course up to two years prior to license expiration.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Interpret State of California regulation changes within the Health and Safety code regarding vehicle emission certification.
- SLO 2: Analyze changes to required SMOG inspection processes.
- Implement new procedures into practice to ensure SMOG inspections are performed in compliance with statutes and regulations.
- SLO 3: Identify BAR regulatory changes in regards to vehicle emission inspection and repair.

AMT 130 Ford ASSET Advanced Automatic Transmission Diagnosis

| Units: | 1.5 |
| Hours: | 27 hours LEC |
| Prerequisite: | None |
| Enrollment Limitation: | Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements. |
| Catalog Date: | June 1, 2020 |

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course provides a review of electronically controlled automatic transmissions and transaxles to include electronic control system theory, hydraulic/mechanical system theory, electronic testing procedures, hydraulic testing procedures, mechanical testing procedures, module programming and configuration, and adaptive shift strategies. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the theory and operation of advanced electronically controlled automatic transmissions and transaxles.
- Explain the operation of advanced automatic transmission and transaxle electronic control systems.
- Explain the operation of advanced automatic transmission and transaxle hydraulic and mechanical systems.
- SLO 2: Demonstrate the ability to diagnose advanced automatic transmission and transaxle concerns.
- Identify advanced automatic transmission and transaxle components.
- Perform mechanical testing of advanced automatic transmission and transaxle concerns to evaluate component condition and/or system operation.
- Perform hydraulic testing of advanced automatic transmission and transaxle concerns to evaluate component condition and/or system operation.
- Perform electronic testing of advanced automatic transmission and transaxle concerns to evaluate component condition and/or system operation.
- SLO 3: Demonstrate the ability to repair advanced automatic transmission and transaxle concerns.
- Select, service, and replace advanced automatic transmission and transaxle components based upon inspection and measurement using manufacturer's specifications and procedures.
- Perform necessary module programming and/or configuration as part of the repair procedure.
- Perform necessary re-learn strategies after resetting adaptive shift strategies as part of the repair procedure.

AMT 131 Ford ASSET Diesel Engine Performance
This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course provides a review of light duty diesel engine performance systems to include diesel engine theory, air induction systems, fuel systems, starting aid systems, emission controls, and exhaust after-treatment systems. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Upon completion of this course, the student will be able to:

- SLO 1: Understand the basic operation of light duty diesel engines and associated systems.
  - Explain the operation of light duty four stroke cycle diesel engines.
  - Explain the operation of light duty diesel engine fuel supply and fuel injection systems.
  - Explain the operation of light duty diesel engine air induction systems.
  - Explain the operation of light duty diesel engine starting aid systems.
  - Explain the operation of light duty diesel engine emission control systems.
  - Explain the operation of light duty diesel engine exhaust after-treatment systems.
  - Explain the operation of light duty diesel electronic engine control systems.

- SLO 2: Demonstrate the ability to diagnose light duty diesel engine performance concerns.
  - Identify light duty diesel engine performance components.
  - Perform mechanical testing of light duty diesel engine performance concerns to evaluate component condition and/or system operation.
  - Perform electronic testing of light duty diesel engine performance concerns to evaluate component condition and/or system operation.

- SLO 3: Demonstrate the ability to repair light duty diesel engine performance concerns.
  - Select, service, and replace light duty diesel engine performance components based upon inspection and measurement using manufacturer's specifications and procedures.

This is a short-term course designed to enable students to gain skills in a specialized automotive area and to assist the student in preparation for state licensure requirements when applicable. Some of the service system topics that may be scheduled include: brakes, charging, alignment, brakes, automatic transmission, air conditioning and service management. Consult class schedule for specific topics being offered.

Upon completion of this course, the student will be able to:

- SLO 1: Describe industry standards for automotive service.
- Identify service publications that define service standards.
- Explain the importance service standards for effective repair.
- SLO 2: Appraise vehicle condition based upon industry standards.
- Perform basic mechanical diagnostic procedures for automotive service.
- Perform basic electronic diagnostic procedures for automotive service.
- SLO 3: Demonstrate the ability to perform service to industry standards.
- Select, service, and replace vehicle components based upon inspection and measurement using manufacturer’s specifications.
- Verify service quality in accordance with industry standards.

AMT 294 Topics in Automotive Mechanics Technology

<table>

</tr>
</tbody>
</table>

This course covers special topics not included in current automotive offerings in a timely manner. Topics may be offered in workshops or seminar presentations on timely subjects or targeted for specific audiences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- (SLO1): Demonstrate the skills and competencies necessary for effective diagnosis of vehicle systems.
- (SLO2): Demonstrate the skills and competencies necessary for effective repair of vehicle systems.
- (SLO3): Demonstrate the skills and competencies necessary for effective customer service within the Automotive Industry.

AMT 295 Independent Studies in Automotive Mechanics Technology

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

AMT 300 Automotive Fundamentals and Shop Procedures

This course includes a basic study of vehicles and their mechanical systems including vehicle purchase, vehicle maintenance, vehicle safety systems and the principles and operation of the automotive engine, engine support systems, the drive train, steering, suspension and brakes. This class also explores consumers legal rights concerning vehicle purchase, repair, replacement and recalls. Hand tools, shop equipment and shop procedures will be demonstrated to familiarize the students with the automotive industry.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Describe the fundamentals of vehicle systems to include: vehicle safety systems, engine operation and repair, automatic transmissions/transaxles, manual drive train and axles, suspension and steering, brakes, electrical and electronic systems, heating and air conditioning, and engine performance.
- Explain the purpose and operation of specific vehicle systems.
- Identify the components of vehicle systems and their interaction with other systems and components.
- SLO #2: Describe the fundamentals of diagnosing vehicle systems.
- Identify common vehicle diagnostic equipment.
- Explain the proper use of service publications used in diagnostic procedures.
- Explain how to perform fundamental diagnostic procedures as outlined in manufacturer service publications.
- SLO #3: Describe and apply the fundamentals in repairs of major vehicle systems.
- Demonstrate knowledge of how to perform typical vehicle maintenance service.
- Explain how to follow a repair procedure as outlined in manufacturer service publications.
- Demonstrate knowledge of shop safety, OSHA, and hazardous materials procedures.
- SLO #4: Become an informed consumer that understands his or her legal rights and can make informed economic decisions related to vehicle purchase, maintenance, and repair by demonstrating competence in locating and evaluating information readily available to automotive consumers.
- Locate and interpret vehicle maintenance and service schedules in order to identify components and systems that require periodic inspection and/or maintenance.
- Compare maintenance and use costs of different vehicles using published information.
- Compare costs, coverage, and benefits/drawbacks of various warranty types including: manufacturer new-car warranties, extended warranties (both manufacturer and aftermarket), and emissions warranties.
- Evaluate vehicle purchase options including vehicle ergonomics, pricing, safety systems, warranty options, and financing.
- Examine legal rights of automotive consumers related to: vehicle purchasing, vehicle repair, vehicle lemon law, warranty denial, and consumers bill of rights concerning vehicle repair.

AMT 301 Automotive Service Management

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |
This course provides a survey of automotive service operations, management strategies, economic importance, regulatory responsibilities, customer relations, and employment opportunities in the automotive service industry.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- SLO 1: Identify the major types of repair organizations that comprise the auto service industry.
- Evaluate the benefits and deficiencies of different types of service facilities.
- SLO 2: Calculate the total investment in facilities and equipment required to operate a service shop.
- Describe requirements and procedures necessary to start and open a small auto service business.
- Analyze methods of financial measurement of income, expenses, and compensation in the automotive service environment.
- SLO 3: Examine best automotive service practices in employee and customer relations.
- Evaluate the basic qualities that establish value in marketing an automotive product or service.
- SLO 4: Describe the implications of the repair order as a legal contract in California.
- Identify the major areas of legal responsibilities in customer transactions.

AMT 303 Automotive Electrical & Electronic Systems

This course is a study of the fundamental principles of electricity as used by the auto technician. Construction and function of automotive electrical/electronic components and systems will be discussed, including storage batteries, charging and starting systems, lighting, and accessory systems.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- SLO 1: Describe theory and operation of Automotive Electrical/Electronic Systems.
- Explain general electrical/electronic system principles.
- Explain battery systems and the relationship to electronic systems.
- Explain starting and charging systems.
- Identify components of automotive electrical systems.
- Explain lighting and driver information systems.
- Recognize electronic principles and how they relate to particular automotive systems.
- Identify electrical/electronic system failures.
- SLO 2: Diagnose automotive electrical/electronic concerns.
- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause and correction.
- Research applicable vehicle and service information, such as electrical/electronic system operation, system specifications, technical service bulletins, vehicle service history, and service precautions.
- Explain the proper use of technical service publications used in diagnostic procedures.
- Recall and apply step-by-step diagnostic procedures.
- Apply the use of scan-tools and digital multi meters (DMM) accurately.
- Perform road or system tests to verify customers concern.
SLO #3: Repair automotive electrical/electronic systems.
Perform the necessary repair procedure for a certain set of electrical/electronic diagnostic problems.
Perform disassembly, inspection, testing, and reassembly of automotive electronic/electrical systems.
Identify and apply the use of special tools necessary to repair automotive electrical/electronic systems.
Perform the outcome of the repair through the test drive analysis.

AMT 304 Automotive Manual Drive Train and Axles

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Prerequisite: | None. |
| Advisory: | AMT 300 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers the principles of operations of automotive power trains, including diagnosis and overhaul techniques of clutches, manual transmission/transaxles, transfer cases, drive lines and differentials.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the operation of clutches, manual transmissions, transaxles, transfer cases, drive shafts, and axle assemblies (powertrain).
- Explain the use of torque in manual transmissions.
- Explain the relationship between torque, speed and gear ratios.
- Identify the components in manual transmissions, and transaxles.
- Identify the components of transfer cases, clutches, drive shafts, and axle assemblies.
- Explain the flow of power through manual transmissions and transaxles.
- Explain the flow of power through clutches and axle assemblies.
- SLO 2: Demonstrate the ability to diagnose manual powertrain concerns.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Perform noise diagnosis of the manual powertrain.
- Perform vibration diagnosis of the manual powertrain.
- Perform mechanical diagnosis of manual powertrain concerns.
- SLO 3: Demonstrate the ability to repair the manual powertrain system.
- Perform disassembly and reassembly of manual transmissions.
- Perform disassembly and reassembly of manual transaxles.
- Select, service, and replace powertrain components based upon inspection and measurement and manufacture's specifications.

AMT 305 Survey of Alternative Fueled & Hybrid Vehicles

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course will provide the students with resources and relevant information about the technologies of alternative fueled, electric and hybrid vehicle powertrains, as well as the impacts of their wider application in society. While the course will have a technical component, the larger focus of the course is targeted at both the automotive and non-automotive student. Access to a computer with Internet capabilities will be necessary for this course.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Explain the role of hybrid and alternative fuel vehicles in today's society.
- Research the technology used in hybrid and alternative fuel vehicles in contemporary society
- Evaluate the different types of hybrid and alternative-fueled vehicles.
- Assess alternatives to carbon-based fuels, including factors needed to reduce the carbon footprint.
- SLO 2: Analyze the operation of internal combustion, alternative fuel and hybrid powered vehicles.
- Assess current Internal Combustion Engine (ICE) technology.
- Identify major components and systems used in serial and parallel hybrid powertrains.
- SLO 3: Explain the safety procedures used while servicing alternative fuel and hybrid vehicles.

AMT 306 Small Engine Repair

This course focuses on operation and repair of small four-cycle engines. Special emphasis is placed on design and operation principles of internal combustion engines that support the student's understanding of automotive engines.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Describe the purpose of the small engines in current use.
- Identify the components of small engines.
- Explain the operation of the combustion cycle of small engines.
- Explain the mechanical operation of small engines.
- Determine correct small engine size for its intended application.
- SLO 2: Diagnose small engine operation concerns.
- Prepare repair orders to include customer information, engine identifying information, customer concern, related service history, cause and correction.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Perform noise and vibration diagnosis of concerns caused by engine operation or improper engine mounting.
- Perform mechanical diagnosis of small engine systems as described in service publications.
- Perform electronic diagnosis of small engine systems as described in service publications.
- SLO 3: Assess and repair small engine systems.
- Perform disassembly and reassembly of small engine components.
- Select, service, and replace small engine components based upon inspection and measurement using manufacturer's specifications and procedures.
- Verify repair using small engine in its intended application.
- Apply proper safety practices as outlined in service publications.
- List safety concerns related to hazardous materials with regards to current industry regulations and standards.
AMT 308 Late Model Car Care and Maintenance

This course is designed for the service technician and late model car owner wishing to perform or schedule car maintenance. This course will provide both men and women with basic automotive repair procedures and a fundamental understanding of how various automotive components and systems work. Use of the owner's manual, repair orders and other resources will be emphasized along with the development of a preventative maintenance schedule.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- understand how to service various automotive systems.
- develop preventative maintenance schedules.
- use the car's owner's manual.
- understand repair orders.
- perform basic car repairs that all car owners should know how to do.

AMT 310 Engine Performance

This course covers basic principles of the internal combustion engine and its related components, with an emphasis on complete electrical and fuel systems. The course will include the use of advanced types of testing equipment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate understanding of engine performance systems and their relationships.
- Identify major engine performance components and systems.
- Describe the relationships of mechanical, fuel, ignition and emissions systems to one another.
- SLO #2: Perform engine performance-related services and repairs.
- Perform mechanical services including component adjustments, removal and replacement.
- Perform ignition services, including component removal and replacement.
- Perform fuel system services, including cleaning, component removal and replacement.
- SLO #3: Diagnose engine performance systems.
- Perform basic engine diagnostic checks, such as engine condition and cooling system tests.
- Use the automotive exhaust gas analyzer to test the air/fuel ratio for better performance and fuel economy.
- Evaluate engine performance systems in relationship to manufacturer's specifications.
- Diagnose driveability problems using oscilloscope and scan-tool technology.

AMT 314 Wheel Alignment

3 Units:
54 hours LEC
None.
CSU
June 1, 2020
Catalog Date:

Student Learning Outcomes

3 Units:
36 hours LEC; 54 hours LAB
AMT 300, 306, or 322 with a grade of "C" or better
AMT 303
CSU
June 1, 2020
Catalog Date:

Student Learning Outcomes
This course offers an in-depth examination of alignment equipment and different vehicle manufacturer's alignment systems. It will cover diagnosis and repair of Wheel/Tire Systems, Steering Systems, Suspension Systems, and Wheel Alignment.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1:** Describe the purpose of alignment procedures.
- **SLO 1:** Explain the relationship between caster, camber and toe.
- **SLO 1:** Recall and accurately apply the operation of alignment equipment.
- **SLO 1:** Identify the components of the suspension system.
- **SLO 1:** Explain adjustment angles.
- **SLO 2:** Diagnose vehicle alignment angle concerns.
- **SLO 2:** Prepare a work order to include customer information, vehicle identifying information, customer concern, related service history, cause and correction.
- **SLO 2:** Explain the proper use of technical service publications used in the diagnostic procedure.
- **SLO 2:** Perform noise diagnosis caused by alignment angles not within specifications.
- **SLO 2:** Perform vibration diagnosis of tires and wheels.
- **SLO 2:** Perform mechanical diagnosis of alignment angles.
- **SLO 3:** Apply the adjustment of alignment angles.
- **SLO 3:** Perform disassembly and reassembly suspension components.
- **SLO 3:** Perform four wheel alignment(s).
- **SLO 3:** Select, service, and replace alignment components based upon inspection and measurement and manufacturer's specifications.
- **SLO 3:** Demonstrate proper safety practices as outlined in service publications.
- **SLO 3:** Demonstrate the proper use of special tools as directed in service publications.
- **SLO 3:** List safety concerns related to hazardous materials with regards to hazardous materials regulations.

---

**AMT 316 Automotive Brakes**

This course covers the principles of operation of automotive brakes and anti-lock brake systems, including diagnosis and overhaul techniques of power brake system components.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1:** Understand theory and operation of automotive brake systems.
- **SLO 1:** Explain the purpose of conventional, anti-lock, traction control and electronic stability assist brake systems.
- **SLO 1:** Identify brake systems components.
- **SLO 1:** Explain the operation of conventional, anti-lock, traction control and electronic stability assist brake systems.
- Describe the effect the following principles have on brake system operation: vehicle speed-weight ratios, friction, simple hydraulics, brake fluid viscosity and composition.
- SLO 2: Demonstrate the ability to diagnose automotive brake systems.
- Demonstrate the ability to write repair orders to include: customer information, vehicle identifying information, customer concern, related service history, cause and correction.
- Research applicable vehicle and service information, such as engine management system operation, type of braking systems, vehicle service history, service precaution, and technical service bulletins.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Demonstrate the ability to follow step-by-step diagnostic procedures.
- Demonstrate the use of diagnostic equipment.
- Perform road test to verify the customer concern.
- SLO 3: Demonstrate the ability to repair automotive brake systems.
- Demonstrate the ability to test brake system components.
- Perform removal and replacement of brake system components.
- Perform bleeding procedure.
- Demonstrate adjustment procedures as outlined in the service manual.
- Demonstrate the use of special tools necessary to repair automotive brake systems.
- Perform the outcome of the repair through the test drive analysis.
- List safety concerns related to hazardous materials with regards to “Hazardous Materials Regulations”.

---

**AMT 321 Advanced Automotive Electrical & Hybrid Vehicle Systems**

**Units:** 3
**Hours:** 36 hours LEC; 54 hours LAB
**Prerequisite:** AMT 303 with a grade of “C” or better
**Transferable:** CSU
**Catalog Date:** June 1, 2020

This course is a study of the principles of electronic systems serviced by the automotive technician. Construction and function of automotive electronic components and systems will be discussed, including general system diagnosis, driver information systems, vehicle communication networks, hybrid vehicle propulsion technology and controls, and electronic accessory systems.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: Describe the theory and operation of Electronic Control Systems.
- Explain general electrical/electronic system principles.
- Explain hybrid electric vehicle propulsion systems and their relationship to electronic controls.
- Explain driver information systems and their relationship to electronic control systems.
- Identify the components of Electronic Control Systems.
- Explain vehicle communication network principles.
- Explain electronic accessory system principles.
- Recognize electronic principles and how they relate to hybrid vehicle automotive systems.
- Identify electronic system failures.
- SLO 2: Diagnose automotive electronic control system concerns.
- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause and correction.
- Research applicable vehicle and service information, such as electrical/electronic system operation, system specifications, technical service bulletins, vehicle service history, and service precautions.
- Explain the proper use of technical service publications used in diagnostic procedures.
- Recall and apply step-by-step diagnostic procedures.
- Apply the use of scan-tools and digital multi meters (DMM) accurately.
- Perform road or system tests to verify the customer's concern.
- SLO 3: Repair automotive electronic control systems.
- Perform the necessary repair procedure for a certain set of electronic control system diagnostic problems.
- Perform disassembly, inspection, testing, and reassembly of electronic control systems in gasoline and hybrid electric powered vehicles.
- Identify and apply the use of special tools necessary to repair automotive electronic control systems, and hybrid electric vehicle propulsion systems.
- Verify the outcome of the repair through the test drive analysis.

AMT 322 Engine Repair

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Advisory:** AMT 300 and 306  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course focuses on the theory of operation and repair of the automotive internal combustion engine. Major emphasis will be on diagnosis, measurement, repair and assembly of the automotive engine.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: Understand the basic operation of automotive engines.  
- Explain the four stroke cycle.  
- Explain the relationship of mechanical components in the engine.  
- Explain how engines are classified.  
- SLO 2: Diagnose engine mechanical concerns and conduct diagnostic testing procedures.  
- Perform engine noise diagnosis.  
- Perform basic engine mechanical diagnostic procedures.  
- SLO 3: Perform the procedures and techniques involved in a gasoline engine overhaul.  
- Disassemble, clean, inspect and measure all components of the engine.  
- Perform machining operations on the engine block and cylinder heads to manufacture's specifications.  
- Select, service, and replace engine components based upon inspection and measurement and manufacture's specifications.  
- Reassemble the engine components.

AMT 324 Electronic Fuel Injection

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** AMT 303 with a grade of "C" or better  
**Advisory:** AMT 310  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020
This course focuses on the theory and operation, service, diagnostic procedures, and repair of electronic fuel injection systems. This course includes the various types of electronic fuel injection systems and the diagnostic equipment currently used in the automotive industry. In addition, also covered in this course are the theory and operation, and service of intake and exhaust systems, and forced induction systems such as superchargers and turbochargers.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- SLO 1: Understand theory and operation of electronic fuel injection.
- Explain the purpose of electronic fuel injection.
- Identify the components of electronic fuel injection.
- Explain the operation of electronic fuel injection.
- SLO 2: Demonstrate the ability to diagnose electronic fuel injection.
- Demonstrate the ability to write repair orders to include: customer information, vehicle identifying information, customer concern, related service history, cause and correction.
- Research applicable vehicle and service information, such as engine management system operation, vehicle service history, service precautions, and technical service bulletins.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Demonstrate the ability to follow step-by-step diagnostic procedures.
- Demonstrate the use of diagnostic equipment.
- Perform road test to verify the customer concern.
- SLO 3: Demonstrate the ability to repair electronic fuel injection.
- Demonstrate the ability to test fuel injection systems and components.
- Perform removal and replacement of electronic fuel injection components.
- Demonstrate adjustment procedures.
- Demonstrate the use of special tools necessary to repair electronic fuel injection.
- Perform the outcome of the repair through the test drive analysis.
- List safety concerns related to hazardous materials with regards to “Hazardous Materials Regulations”.

AMT 326 Automotive Heating and Air Conditioning

This course is a study of installation, operation and repair of vehicle air conditioning systems, cooling systems, and heating systems. The course will include a study of the systems for proper functioning of systems including heat transfer and air flow.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- SLO 1: Understand the basic operation of vehicle air conditioning (A/C) and engine cooling systems.
- Explain heat and pressure relationships.
- Identify A/C specific components on the vehicle.
- Explain the operation of A/C components.
- Explain cooling system operation.
- Identify A/C specific and general tools used in the diagnosis and repair of vehicle A/C and cooling systems.
- SLO 2: Diagnose vehicle air conditioning (A/C) and cooling system concerns.
- Prepare the vehicle for testing.
- Perform the visual and touch procedures to diagnose the A/C system.
- Perform mechanical diagnosis of the A/C and cooling systems.
- Perform electronic diagnosis of the A/C and cooling systems.
- Explain the proper use of technical service information.
- SLO 3: Repair vehicle air conditioning (A/C) and cooling systems.
- Identify and replace faulty components in the A/C system using industry accepted practices.
- Identify and replace faulty components in the cooling system using industry accepted practices.

AMT 328 Light Duty Diesel Engine Performance

<table>

</table>

This course introduces the student to light duty diesel engine performance systems to include diesel engine theory, air induction systems, fuel systems, starting aid systems, emission controls, and exhaust after-treatment systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the basic operation of light duty diesel engines and associated systems.
- Explain the operation of light duty four stroke cycle diesel engines.
- Explain the operation of light duty diesel engine fuel supply and fuel injection systems.
- Explain the operation of light duty diesel engine air induction systems.
- Explain the operation of light duty diesel engine starting aid systems.
- Explain the operation of light duty diesel engine emission control systems.
- Explain the operation of light duty diesel engine exhaust after-treatment systems.
- Explain the operation of light duty diesel electronic engine control systems.
- SLO 2: Demonstrate the ability to diagnose light duty diesel engine performance concerns.
- Identify light duty diesel engine performance components.
- Perform mechanical testing of light duty diesel engine performance concerns to evaluate component condition and/or system operation.
- Perform electronic testing of light duty diesel engine performance concerns to evaluate component condition and/or system operation.
- SLO 3: Demonstrate the ability to repair light duty diesel engine performance concerns.
- Select, service, and replace light duty diesel engine performance components based upon inspection and measurement using manufacturer's specifications and procedures.

AMT 330 Automatic Transmissions/Transaxles
This course is a study of the fundamentals and theory of automatic transmissions/transaxles. The laboratory experience will include inspection, diagnosis and adjustments.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- SLO 1: Understand theory and operation of automatic transmissions/transaxles.
- Explain the use of torque in automatic transmissions/transaxles.
- Explain the relationship between torque, speed, and gear ratios.
- Identify components.
- Explain flow of power through automatic transmissions/transaxles.
- Explain operation of torque converters.
- Explain hydraulic principles.
- Understand how the electrical/electronic systems work.
- Understand how to identify types of transmissions/transaxles.
- SLO 2: Demonstrate the ability to diagnose automatic transmission/transaxle concerns.
- Demonstrate the ability to write repair orders to include: customer information, vehicle identifying information, customer concern, related service history, cause, and correction.
- Research applicable vehicle and service information, such as transmission/transaxle system operations, transmission/transaxle types, fluid type, vehicle service history, service precautions and technical service bulletins.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Demonstrate the ability to follow step-by-step diagnostic procedures.
- Demonstrate the use of scan tools and digital multi meters (DMM).
- Perform road test to verify the customer concern.
- SLO 3: Demonstrate the ability to repair automatic transmissions/transaxles.
- Perform the necessary repair procedure for a certain set of transmission diagnostic problems.
- Perform disassembly and reassembly of automatic transmissions/transaxles. Clean, inspect, measure, repair, adjust, or replace components.
- Demonstrate the use of special tools necessary to repair automatic transmissions/transaxles.
- Perform the outcome of the repair through the test drive analysis.
- List safety concerns related to hazardous materials with regards to "Hazardous Materials Regulations".

AMT 332 Automotive Computerized Controls
This course focuses on the study of automotive computerized controls and their application to the engine, chassis and braking systems. Students will learn how on board computers interact with modern vehicle systems.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- SLO #1: Explain theory and operations of automotive computerized controls.
- Explain the use of computers in engine system management.
- Explain the relationships between input sensors, processing and output sensors.
- Identify components within computerized controls.
- Explain the generations of government mandated diagnostics in relation to system operation.
- Describe how computerized electronic systems work.
- Identify various generations of computerized control systems.
- SLO #2: Diagnose automotive computerized control concerns.
- Prepare and write repair orders to include: customer information, vehicle identification information, customer concern, related service history, cause, and correction.
- Research applicable vehicle and service information, such as type of on board diagnostics, code structure, emission compliance level, monitor status, vehicle service history, service precautions, and technical service bulletins.
- Explain the proper use of technical service bulletins used in diagnostic procedures.
- Perform step-by-step diagnostic procedures.
- Apply the use of scan-tools and digital multi meters (DMM).
- Perform road test to verify the customer concern.
- SLO #3: Repair automotive computerized control systems
- Perform the necessary repair procedures for a certain set of automotive computerized control diagnostic problems.
- Perform inspection, testing, disassembly, component replacement, reassembly, and confirmation of repair on automotive computerized control systems.
- Demonstrate the use of specialized on board test sequences to repair automotive computerized control systems.
- Perform the outcome of the repair through data stream analysis.
- List safety concerns related to hazardous materials with regards to "hazardous materials regulations".

AMT 336 Advanced Service Management

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | AMT 301 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is a thorough examination of automotive service management. The course includes strategic planning, financial analysis, personnel management, and automotive service legal responsibilities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1- Compare and contrast the major types of repair organizations that comprise the service industry.
- SLO 2- Define the major roles of strategic planning in automotive service management systems.
- Calculate the total investment required to properly equip and operate an auto service facility.
- Develop a plan to select and maintain appropriate employees for the service environment.
- SLO 3- Assess the importance of applying ethical standards to the management of an organization.
- SLO 4- Evaluate management of profit and the various ways profit is used in a service environment.
- Analyze the impact of various methods of controlling operating costs.
AMT 340 Emission Control Inspection and Repair

This course includes inspection, testing, diagnosis, and service of automotive emission control systems. The course is required for all students who plan to become licensed as a Smog Check Inspector. The course meets BAR Level 1 & 2 training requirements. Upon successful completion of this course, students are eligible to take the State of California Smog Check Inspector licensing exam and may be eligible to take the State of California Smog Check Repair Technician licensing exam.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Identify the fundamentals of vehicle emission systems to include electrical, vacuum, computerized vehicle emission components, emission regulations, emission testing, emission reduction systems, and emission inspection/diagnostic equipment.
- Explain the purpose of vehicle emission systems.
- Identify the components of vehicle emission systems.
- Explain the cause and effect of vehicle emissions.
- Identify components of the emission system that require visual and functional inspection and/or maintenance.
- SLO 2: Recognize the fundamentals of diagnosing vehicle emission systems.
- Identify diagnostic equipment.
- Explain the proper use of service publications used in diagnostic/testing procedures.
- Explain how to perform fundamental emission diagnostic/testing as outlined in both manufacture and industry publications.
- Describe the laws, regulations, and procedures associated with consumer authorization of inspections and the overall administration of the Smog Check Program.
- SLO 3: Apply the fundamentals of vehicle emission system repairs.
- Identify the proper service procedures as outlined in manufacturer's service manuals.
- Demonstrate knowledge of how to perform systematic flow chart diagnosis of vehicle emission systems.
- Explain how to repair specific vehicle emission systems.
- Demonstrate knowledge of shop safety, OSHA, and hazardous materials procedures.

AMT 370 Ford ASSET Automotive Fundamentals and Dealership Practices

Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program. Some training materials utilized in this course require access to restricted Ford Motor Company websites obtained via enrollment in the Ford Automotive Student Service Education Training (ASSET) program and establishment of a Ford/Lincoln dealership sponsorship.
This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course provides an introduction into the theory and operation of major automotive systems including: gasoline engines, electrical systems, transmissions and drivetrains, steering, suspension, and brakes. Common automotive hand tools, power tools, and equipment will also be introduced and demonstrated to familiarize students with a typical automotive shop. Typical new-car dealership hierarchy and structure along with standard practices will be investigated. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the fundamental purpose, components, and operation of major automotive systems.
- Explain the basic theory and operation of gasoline engines.
- Explain the basic theory and operation of automatic transmissions and transaxles.
- Explain the basic theory and operation of manual transmissions, drivetrains, and axles.
- Explain the basic theory and operation of suspension and steering systems.
- Explain the basic theory and operation of brake systems.
- Explain the basic theory and operation of electrical and electronic systems.
- Explain the basic theory and operation of heating and air conditioning systems.
- Explain the basic theory and operation of engine performance systems.
- SLO 2: Understand the proper use of tools, equipment, and publications used for automotive diagnosis and repair.
- Identify common hand tools, power tools, and diagnostic equipment, and their appropriate usage.
- Explain proper vehicle lifting procedures.
- Demonstrate knowledge of shop safety, OSHA, and hazardous materials procedures.
- Perform proper vehicle identification to ensure accurate diagnosis and repair.
- Locate and analyze service information in hard copy and electronic formats.
- Identify the proper maintenance interval schedule as outlined in the vehicle owner's manual.
- SLO 3: Understand typical new car dealership hierarchy, structure, and standard procedures.
- Identify and explain key job roles and chain-of-command in new car dealership parts and service departments.
- Demonstrate knowledge of Bureau of Automotive Repair (BAR) regulations relating to work/repair orders.
- Demonstrate knowledge of manufacturer warranty policies and procedures.
- Demonstrate knowledge of new car pre-delivery inspection procedures.

AMT 371 Ford ASSET Automotive Electrical/Electronic Systems

- Units: 3
- Hours: 36 hours LEC; 54 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements.
- Transferable: CSU
- Catalog Date: June 1, 2020

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course is a study of the fundamental principles of electricity and electronic systems as used by the automotive technician. Construction and function of automotive electrical and electronic components will be discussed, including batteries, starting systems, charging systems, lighting systems, and power accessories. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
SLO 1: Describe the theory and operation of automotive electrical and electronic systems.

- Explain general electrical and electronic system principles to include the relationship between volts, amperes, and ohms.
- Explain battery systems and their relationship to electronic systems.
- Explain starting and charging systems.
- Identify components of automotive electrical systems.
- Explain lighting and driver information systems.
- Recognize electronic principles and how they relate to particular automotive systems.
- Identify typical electrical and electronic system failures.

SLO 2: Diagnose automotive electrical and electronic concerns.

- Prepare and write repair orders to include: customer information, vehicle identifying information, customer concerns, related service history, cause, and correction.
- Research applicable vehicle and service information, such as electrical and electronic system operation, system specifications, technical service bulletins, vehicle service history, and service precautions.
- Explain the proper use of technical service publications used in diagnostic procedures.
- Recall and apply step-by-step diagnostic procedures.
- Apply the use of scan-tools and digital multi-meters (DMM) accurately.
- Perform road tests or system self-tests to verify the customer's concern.

SLO 3: Repair automotive electrical and electronic systems.

- Perform the necessary repair procedure for electrical and electronic circuit faults.
- Perform disassembly, inspection, testing, and reassembly of automotive electronic and electrical systems.
- Identify and apply the use of special tools necessary to repair automotive electrical and electronic systems.
- Verify the outcome of the repair through a test drive analysis or system self-test.

AMT 372 Ford ASSET Automotive Brake Systems

- 3 Units: 36 hours LEC; 54 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program. Some training materials utilized in this course require access to restricted Ford Motor Company websites obtained via enrollment in the Ford Automotive Student Service Education Training (ASSET) program and establishment of a Ford/Lincoln dealership sponsorship.
- Transferable: CSU
- Catalog Date: June 1, 2020

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course covers the theory, diagnosis, and repair of automotive brake systems, including anti-lock braking systems (ABS). Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the theory and operation of automotive brake systems.
- Identify the purpose of conventional and anti-lock braking systems and components.
- Explain the basic theory and operation of conventional and anti-lock braking systems and components.
- Analyze the effects of basic physics principles on brake system operation, to include: inertia, weight transfer, friction, leverage, hydraulics, and energy conversions.
- List safety concerns related to hazardous materials.
- SLO 2: Demonstrate the ability to diagnose automotive brake systems.
Demonstrate the ability to write repair orders to include: customer information, vehicle identifying information, customer concern, related service history, cause and correction.

Research applicable vehicle and service information, such as engine management system operation, type of braking systems, vehicle service history, service precautions, and technical service bulletins.

Identify and explain the proper use of service information used in the diagnostic procedure.

Demonstrate the ability to follow step-by-step diagnostic procedures.

Demonstrate proper use of diagnostic equipment.

Perform a road test analysis to verify the customer concern.

SLO 3: Demonstrate the ability to repair automotive brake systems.

Perform removal and replacement of brake system components.

Analyze component condition through inspection and measurement and determine the appropriate repair.

Perform hydraulic system bleeding procedures including anti-lock braking (ABS) bleeding.

Clean, inspect, service, and adjust brake components according to manufacturer's procedures.

Demonstrate the proper use of special tools and equipment needed for brake service.

Perform a road test analysis to verify the effectiveness of the repair procedure.

---

AMT 374 Ford ASSET Automotive Suspension and Steering

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course covers theory, diagnosis, and repair of automotive steering and suspension systems. Wheels, tires, and related systems will also be discussed, including power steering systems and electronically controlled steering and suspension systems. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Upon completion of this course, the student will be able to:

- SLO 1: Describe the purpose of automotive suspension and steering systems.
- Identify the components of the suspension system.
- Explain the operation of the suspension system.
- Identify the components of various steering systems to include manual systems, hydraulic power steering systems, and electronic power steering systems.
- Explain the operation of various steering systems to include manual systems, hydraulic power steering systems, and electronic power steering systems.
- Describe fluid dynamics as it relates to steering and suspension systems.
- SLO 2: Diagnose automotive suspension and steering concerns.
- Prepare draft work orders to include customer information, vehicle identifying information, customer concern, related service history, cause, and correction.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Perform mechanical diagnosis of suspension and steering systems as described in service publications.
- Perform electronic diagnosis of suspension and steering systems as described in service publications.
- Perform noise, vibration, and harshness diagnosis caused by suspension and steering components not within specifications.

---

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: AMT 371 with a grade of "C" or better
Enrollment Limitation: Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements.
Transferable: CSU
Catalog Date: June 1, 2020
- SLO 3: Assess and repair suspension and steering systems.
- Perform disassembly and reassembly of suspension and steering components.
- Select, service, and replace suspension and steering components based upon inspection and measurements using manufacturer's specifications and procedures.
- Verify repair utilizing a test drive analysis.
- Apply proper safety practices as outlined in service publications.
- List safety concerns related to hazardous materials with regards to hazardous materials regulations.

AMT 375 Ford ASSET Automotive Wheel Alignment

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Prerequisite: | AMT 371 with a grade of "C" or better |
| Corequisite: | AMT 374 |
| Enrollment Limitation: | Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course covers various automotive wheel alignment equipment and procedures. Wheel alignment diagnosis and repair will be performed as well as maintenance and repair of related systems. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Describe the purpose of steering and suspension system alignment angles and procedures
- Identify the purpose of caster, camber, and toe adjustments and their relationships to one another
- Identify proper alignment procedures and equipment usage
- Inspect vehicle for available adjustments to alignment angles
- Explain effects of the various alignment angles on vehicle stability and tracking, tire wear, and vehicle safety
- SLO 2: Diagnose concerns caused by incorrect wheel alignment
- Prepare a work order to include customer information, vehicle identifying information, customer concern, related service history, cause, and correction
- Explain the proper use of technical service publications used in the diagnostic procedure
- Perform mechanical diagnosis of alignment angles utilizing appropriate equipment
- Utilize abnormal tire tread wear patterns to identify wheel alignment concerns
- Perform noise, vibration, and harshness diagnosis to include wheel and tire balancing and road force variation measurements
- SLO 3: Adjust vehicle wheel alignment angles to proper specifications
- Perform pre-alignment inspection and safely prepare vehicle for wheel alignment procedures
- Select, service, and replace alignment components based upon inspection and measurements and manufacturer's specifications
- Identify specialized procedures or components necessary to obtain proper wheel alignment and prepare vehicle accordingly
- Demonstrate proper safety practices as outlined in service publications
- Demonstrate the proper use of special tools as directed in service publications
- List safety concerns related to hazardous materials with regards to hazardous materials regulations
AMT 376 Ford ASSET Automotive Heating and Air Conditioning

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course covers the theory, diagnosis, and repair of automotive heating and air conditioning systems, including air management sub-systems and an overview of engine cooling systems. Proper handling of common automotive refrigerants in accordance with EPA regulations will also be covered. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the basic operation of automotive heating, ventilation, and air conditioning (HVAC) systems
- Explain relationships between temperature and pressure
- Identify components of automotive heating and engine cooling systems
- Explain the operation of automotive heating and engine cooling systems
- Identify components of automotive air conditioning systems
- Explain the operation of automotive air conditioning systems
- Explain the characteristics and associated safety hazards of typical automotive refrigerants used in air conditioning systems in accordance with EPA regulations
- Identify special tools and equipment used in HVAC diagnosis, repair, and maintenance
- SLO 2: Diagnose automotive heating, ventilation, and air conditioning (HVAC) system concerns
- Prepare the vehicle for HVAC system performance testing
- Perform visual and touch procedures to diagnose the HVAC system
- Identify refrigerant used in the HVAC system
- Perform mechanical diagnosis of the HVAC system to include pressure testing, analyzing gauge readings, and monitoring compressor cycling times
- Perform electronic diagnosis of the HVAC system
- Explain the proper use of technical service information
- SLO 3: Repair automotive heating, ventilation, and air conditioning (HVAC) systems
- Perform refrigerant service to include refrigerant identification, recovery, evacuation, vacuum testing, and charging
- Identify and replace faulty components in the A/C system using industry accepted practices
- Identify and replace faulty components in the heating and engine cooling system using industry accepted practices
- Verify the effectiveness of the repair via HVAC system performance testing

AMT 378 Ford ASSET Automatic Transmissions/Transaxles

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: AMT 371 with a grade of "C" or better
Enrollment Limitation: Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements.
Transferable: CSU
Catalog Date: June 1, 2020
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the theory and operation of automatic transmissions and transaxles.
- Explain the purpose and role of torque in the drive train.
- Explain the relationship between torque, speed and gear ratios.
- Identify the components in automatic transmissions and transaxles.
- Explain the operation of torque converters.
- Explain hydraulic principles as they apply to automatic transmissions and transaxles.
- Identify various types of automatic transmissions and transaxles.
- Explain the principles of electrical and electronic systems as they apply to automatic transmissions and transaxles.
- Explain the flow of power through automatic transmissions and transaxles.
- SLO 2: Demonstrate the ability to diagnose automatic transmissions and transaxles.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Perform mechanical testing of automatic transmission and transaxle concerns to evaluate component condition and/or system operation.
- Perform hydraulic testing of automatic transmission and transaxle concerns to evaluate component condition and/or system operation.
- Perform electronic testing of automatic transmission and transaxle concerns to evaluate component condition and/or system operation.
- Utilize clutch and band application charts to diagnose automatic transmission and transaxle concerns.
- Utilize solenoid operation charts to diagnose automatic transmission and transaxle concerns.
- SLO 3: Demonstrate the ability to service and repair automatic transmissions and transaxles.
- Demonstrate an understanding of proper automatic transmission maintenance and service.
- Perform disassembly and reassembly of automatic transmissions and transaxles.
- Demonstrate the use of special tools necessary to repair automatic transmissions and transaxles.
- Select, service, and replace automatic transmission and transaxle components based upon inspection and measurement using manufacturer's specifications and procedures.

AMT 379 Ford ASSET Automotive Engine Repair

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course covers the theory, diagnosis, and repair of automotive engines. Proper maintenance and service will also be covered. Complete engine overhaul procedures will be examined, but the primary focus will be on typical engine repairs. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the basic components and operation of automotive engines.
- Explain the four stroke (Otto) cycle.
- Explain the relationship of the various mechanical components within the engine.
- Explain various ways in which engines are classified (cylinder layout, number of strokes, fuel, ignition source, etc.).
- SLO 2: Diagnose engine mechanical concerns and conduct diagnostic testing procedures.
- Perform engine noise diagnosis.
- Perform basic engine mechanical diagnostic procedures.
- SLO 3: Perform the procedures and techniques involved in typical engine repairs and overhauls.
- Disassemble, clean, inspect, and measure all components of the engine.
- Demonstrate an understanding of machining operations performed on the engine block and cylinder heads to restore parts to manufacturer's specifications.
- Select, service, and replace engine components based upon inspection and measurement and manufacturer's specifications.
- Service camshaft timing mechanism components on various engines.
- Reassemble the engine.
- Demonstrate an understanding of proper engine installation, start-up, and break-in procedures.

**AMT 381 Ford ASSET Electronic Engine Control**

**Units:** 4

**Hours:** 63 hours LEC; 27 hours LAB

**Prerequisite:** AMT 371 with a grade of "C" or better

**Enrollment Limitation:** Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements.

**Transferable:** CSU

**Catalog Date:** June 1, 2020

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course is a study of Ford Electronic Engine Control systems, their components, and their relationship to other vehicle systems. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: Understand the theory and operation of automotive electronic engine control (EEC) systems and their components.
- Explain the four basic computer functions: Input, Processing, Storage, and Output.
- Explain the theory and operation of various EEC inputs (sensors) to include switches, thermistors, potentiometers, speed/position sensors, pressure sensors, oxygen sensors, and mass air flow sensors.
- Explain the theory and operation of automotive computers and control modules.
- Explain the theory and operation of various EEC outputs (actuators) to include solenoids, relays, motors, and lights.
- Explain the relationship between various EEC components as it relates to the concept of a feedback loop.
- Explain the theory and operation of automotive computer and control module multiplexing and networking systems.
- SLO 2: Diagnose automotive electronic engine control (EEC) systems and their components.
- Retrieve diagnostic trouble codes and related data using a scan tool.
- Monitor and analyze parameter identification data using a scan tool.
- Analyze the status of on board diagnostic inspection and maintenance monitors.
- Perform electronic diagnostic testing using manufacturer's specifications and procedures.
- SLO 3: Demonstrate the ability to repair automotive electronic engine control (EEC) systems and their components.
- Select, service and repair components of the EEC system using manufacturer's specifications and procedures.
- Demonstrate an understanding of proper module replacement and programming procedures.
- Perform an on board diagnostics drive cycle and analyze the results to verify the effectiveness of a repair.

**AMT 382 Ford ASSET Gasoline Engine Performance**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** AMT 371 with a grade of "C" or better  
**Enrollment Limitation:** Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course offers a thorough examination of basic gasoline engine performance systems to include ignition systems, fuel systems, and emission controls. System maintenance, diagnosis, and repair will also be covered, including the use of specialized test equipment. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: Understand the theory and operation of gasoline engine performance systems and their components.
- Explain the theory and operation of automotive ignition systems to include distributor ignition, waste spark, and coil on plug systems.
- Explain the theory and operation of electronic fuel injection systems to include throttle body injection, port fuel injection, and gasoline direct injection.
- Explain the theory and operation of automotive emission control systems to include catalytic converters, positive crankcase ventilation, evaporative emissions, and exhaust gas recirculation systems.
- SLO 2: Diagnose gasoline engine performance systems and their components.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Perform diagnosis of ignition system concerns using scan tool data and related test equipment.
- Perform diagnosis of electronic fuel injection system concerns using scan tool data and related test equipment.
- Perform diagnosis of emission control system concerns using scan tool data and related test equipment.
- SLO 3: Demonstrate the ability to service and repair gasoline engine performance systems and their components.
- Demonstrate an understanding of proper ignition system maintenance and service.
- Demonstrate an understanding of proper electronic fuel injection system maintenance and service.
- Demonstrate an understanding of proper emission control system maintenance and service.
- Perform removal and replacement of automotive ignition system components.
- Perform removal and replacement of electronic fuel injection system components.
- Perform removal and replacement of emission control system components.
- Perform adjustments as necessary to gasoline engine performance systems and their components.
- Demonstrate the use of special tools necessary to repair gasoline engine performance systems and their components.
- Select, service, and replace gasoline engine performance system components based upon inspection and measurement using manufacturer's specifications and procedures.

**AMT 383 Ford ASSET Advanced Gasoline Engine Performance**

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: AMT 371 with a grade of "C" or better  
Enrollment Limitation: Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements.  
Transferable: CSU  
Catalog Date: June 1, 2020
This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course offers an advanced analysis of gasoline engine performance systems to include ignition systems, fuel systems, and emission controls. New technologies and advances in these systems will be highlighted. This course places emphasis on advanced diagnostic techniques, use of specialized test equipment, and diagnostic strategies to be utilized when standard manufacturer's procedures are unable to properly diagnose or repair the vehicle. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1**: Understand the theory and operation of advanced gasoline engine performance systems and their components.
- **SLO 2**: Diagnose intermittent and advanced gasoline engine performance system concerns.
- **SLO 3**: Demonstrate the ability to service and repair advanced gasoline engine performance systems and their components.

- Explain the advanced theory and operation of automotive ignition systems to include spark duration, peak kV, and secondary ignition pattern analysis.
- Explain the advanced theory and operation of electronic fuel injection systems to include injection timing strategies, piezoelectric injectors, return-less fuel systems, and low and high pressure fuel delivery/injection systems.
- Explain the advanced theory and operation of automotive emission control systems to include universal exhaust gas oxygen (wideband air/fuel ratio) sensors, variable camshaft timing systems, and electronic throttle control.
- Perform diagnosis of advanced ignition system concerns using oscilloscope patterns, spark duration data, and Mode 6 data.
- Perform diagnosis of advanced electronic fuel injection system concerns using fuel injector balance testing (relative injector flow), oscilloscope patterns, and oxygen sensor data.
- Perform diagnosis of advanced emission control system concerns using scan tool data, oscilloscope patterns, breakout boxes, and related test equipment.
- Perform diagnosis of intermittent drivability concerns.
- Perform diagnosis of drivability concerns that do not result in a diagnostic trouble code.
- Utilize critical thinking to develop and execute a diagnostic strategy when manufacturer's procedures fail to properly diagnose and repair the vehicle.
- Demonstrate the ability to service and repair advanced gasoline engine performance systems and their components.
- Demonstrate an understanding of proper gasoline engine performance system maintenance and service.
- Perform removal and replacement of gasoline engine performance system components.
- Perform adjustments as necessary to gasoline engine performance systems and their components.
- Demonstrate the use of special tools necessary to repair gasoline engine performance systems and their components.
- Select, service, and replace gasoline engine performance system components based upon inspection and measurement using manufacturer's specifications and procedures.

**AMT 385 Ford ASSET Automotive Manual Drive Train and Axles**

- **Units**: 3
- **Hours**: 36 hours LEC; 54 hours LAB
- **Prerequisite**: AMT 371 with a grade of "C" or better
- **Enrollment Limitation**: Students taking this course must be enrolled in the Ford Automotive Student Service Education Training (ASSET) program due to prerequisite Ford Motor Company training requirements.
- **Transferable**: CSU
- **Catalog Date**: June 1, 2020
This course is offered to students enrolled in the Ford Automotive Student Service Education Training (ASSET) program. This course covers the theory, diagnosis, and repair of clutches, manual transmissions and transaxles, transfer cases, drive lines, and differentials. Proper maintenance and service will also be covered. Students who successfully complete this course may be eligible for Ford Service Technician Specialty Training (STST) certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand the theory and operation of manual transmissions and transaxles and drive train components to include: clutches, transfer cases, drive shafts, and differential assemblies.
- Explain the purpose and role of torque in the drive train.
- Explain the relationship between torque, speed and gear ratios.
- Identify the components in manual transmissions and transaxles.
- Identify the components of transfer cases, clutches, drive shafts, and axle assemblies.
- Explain the flow of power through manual transmissions and transaxles.
- Explain the flow of power through clutches and axle assemblies.
- SLO 2: Demonstrate the ability to diagnose manual transmissions, transaxles, and drive train concerns.
- Explain the proper use of technical service publications used in the diagnostic procedure.
- Perform noise diagnosis of manual transmissions, transaxles, and drive train components.
- Perform vibration diagnosis of manual transmissions, transaxles, and drive train components.
- Perform mechanical diagnosis of manual transmissions, transaxles, and drive train components.
- SLO 3: Demonstrate the ability to repair manual transmissions, transaxles, and drive train concerns.
- Perform disassembly and reassembly of manual transmissions.
- Perform disassembly and reassembly of manual transaxles.
- Perform disassembly and reassembly of transfer cases.
- Perform disassembly and reassembly of differentials.
- Select, service, and replace drive train components based upon inspection and measurement and manufacturer's specifications.

AMT 495 Independent Studies in Automotive Mechanics Technology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

Explain the importance of the major discipline of study in the broader picture of society.

SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

AMT 498 Work Experience in Automotive Mechanics Technology

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Automotive Mechanics Technology.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED TO ONE'S CAREER.(SLO 1)

- Understand the effects time, stress, and organizational management have on performance.

- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.

- Examine the career/life planning process and relate its relevancy to the student.

- Demonstrate an understanding of basic communication tools and their appropriate use.

- Demonstrate an understanding of workplace etiquette.

- DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.(SLO 2)

- Link personal goals to long term achievement.

- Display an understanding of creating a professional first impression.

- Understand how networking is a powerful job search tool.

- Understand necessary elements of a résumé.

- Understand the importance of interview preparation.

- Identify how continual learning increases career success.

- DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.(SLO 3)
What do Ebola, hemophilia, DNA fingerprinting, sequoias, cuttlefish, intertidal zones, and global climate change have in common? These are a few examples of the diverse topics that are explored in Biology, which is the scientific study of living organisms including their structure, function, evolution, and interactions with other organisms and with the environment. The CRC Biology Department offers a variety of courses that are organized into the following three areas:

- General education courses for non-science majors who want to gain an understanding of the biological world (BIOL 300, 307, 310, 342, 350, 352, 390 and 485).
- Clinically related courses for students pursuing careers in nursing and allied health (BIOL 100, 102, 430, 431, 439 and 440).
- The first two years of a Biology major for those transferring to Bachelor Degree programs in fields related to the life sciences (BIOL 400, 410, and 420).

Students who transfer to four-year universities report a very high level of satisfaction with the education they received at CRC.

Associate Degrees for Transfer

A.S.-T. in Biology

The Associate in Science in Biology for Transfer Degree is designed to prepare students for a seamless transfer into the CSU system to complete a baccalaureate degree in Biology or a similar major. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Science in Nutrition and Dietetics for Transfer is comprised of lower division coursework typically required by CSU institutions. Students must complete the following Associate Degree for Transfer requirements (Pursuant to SB1440, §66746):

- Completion of 60 semester units or 90 quarter units that are eligible for transfer to the California State University.
- The Intersegmental General Education Transfer Curriculum (IGETC) pattern.
- A minimum of 18 semester units or 27 quarter units in a major or area of emphasis, as determined by the community college district.
- Obtainment of a minimum grade point average of 2.0.
- A grade of "C" or better in all courses required for the major or area of emphasis.

Completion of the AS-T degree may not prepare students to transfer to University of California biology programs that may have different requirements. If a student intends to transfer to University of California, additional courses in chemistry, physics, and math may be required.

Note to Transfer Students:

The Associate Degree for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as "double-counting"). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of a student's transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions, because many universities require more lower division courses than those in this degree. Even the CSUs that accept this transfer degree may likely require additional lower division courses to achieve the Bachelor degree. It is critical that students meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

Catalog Date: June 1, 2020
BIOL 400  Principles of Biology  5  
BIOL 410  Principles of Botany  5  
BIOL 420  Principles of Zoology  5  
CHEM 400  General Chemistry I  5  
CHEM 401  General Chemistry II  5  
MATH 350  Calculus for the Life and Social Sciences I (3)  3 - 5  
or MATH 400  Calculus I (5)  
PHYS 350  General Physics  4  
PHYS 360  General Physics  4  
Total Units: 36 - 38

The Associate in Science in Biology for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) the Intersegmental General Education Transfer Curriculum for Science, Technology, Engineering, and Mathematics (IGETC for STEM).

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- DEMONSTRATE UNDERSTANDING OF THE PROCESSES OF SCIENCE, THE SCIENTIFIC METHOD, AND THE RELATIONSHIP BETWEEN SCIENTIFIC RESEARCH AND ESTABLISHED KNOWLEDGE. This includes the ability to: • Elucidate the way in which research leads to generally accepted conclusions and the integration of new research data with the building of a body of scientific knowledge. • Recognize that the information presented in science textbooks and other established “authorities” is the result of research conducted in the field or the lab and is based on an accumulation of data. • Design a scientific inquiry, including use of proper controls and analyses • Demonstrate critical thinking skills by the analysis of data sets, recognition of the implications of perturbations to biological systems, and synthesis of information to draw conclusions.

- EXPRESS ONE’S SELF CLEARLY WHEN WRITING OR SPEAKING ABOUT BIOLOGY, DEMONSTRATING KNOWLEDGE OF BASIC BIOLOGICAL TERMINOLOGY AND UNDERSTANDING OF MAJOR BIOLOGICAL CONCEPTS. This includes the ability to produce: • Laboratory reports which address background information, procedures, results, and analysis of data developed during a laboratory exercise or inquiry project. • Essays explaining biological processes in clear and concise terms. • Reports and term papers which clearly explain biological processes and elucidate current theories explaining biological phenomena.

- DEMONSTRATE BOTH CONTENT KNOWLEDGE AND TEST TAKING SKILLS WHEN COMPLETING ESSAY, OBJECTIVE, AND MULTIPLE CHOICE EXAMS. This includes the ability to: • Demonstrate problem-solving abilities in the major content areas of biology including cell biology, anatomy, physiology, genetics, ecology, and evolution. • Analyze the logic of a multiple-choice question about biology and select the correct response from among related items. • Write clear responses to essay question prompts without including extraneous information or omitting information necessary to provide a clear answer. • Utilize test-taking skills such as critical analysis of information, test-time management and focused writing. • Demonstrate content knowledge in the broad areas of biology including cell biology, anatomy, physiology, genetics, ecology, and evolution.

- CHOOSE AND UTILIZE APPROPRIATE LABORATORY TECHNIQUES PROFICIENTLY. Biology majors’ lab techniques include: • Measurement (use of metric measures) • Microscopy • Pipetting • Gel electrophoresis • Dissection • Basic biochemical techniques such as pH testing, Biuret test, Benedict’s test, etc. • Ability to design a laboratory experiment, including the use of adequate controls and choice of analyses used to examine data, etc. Additional laboratory techniques relevant to biology majors can be found in the SLOs for the chemistry and physics courses required for this major.

- EVALUATE BIOLOGICAL DATA, DRAW REASONABLE CONCLUSIONS, RECOGNIZE THE ETHICAL IMPLICATIONS OF THESE CONCLUSIONS, AND APPLY THESE CONCLUSIONS TO PERSONAL, COMMUNITY, AND SCIENTIFIC PROBLEMS. This includes the ability to: • Choose what data to collect in order to address a specific hypothesis. • Collect data and keep organized records. • Conduct basic graphical and statistical analysis of data. • Reach and clearly express logical conclusions based on biological data. • Relate, in presentations and/or in written reports, how biological information is relevant to personal and community issues. • Recognize the ethical implications of biological research and the responsibility to use knowledge wisely.

- EMPLOY INFORMATION-GATHERING TOOLS TO INVESTIGATE BIOLOGICAL IDEAS. This includes the ability to: • Use the Internet in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found. • Use the library in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.

Career Information
Research, Teaching, or Industrial Laboratory Careers in Molecular Biology, Microbiology, Biotechnology, Genetics, Wildlife Biology, Marine Biology, Pharmacy, Nutrition, Medicine, Dentistry, Veterinary, Optometry, etc. Some career options require more than two years of college study. Classes beyond the associate degree may be required for some career options or to fully prepare students for transfer to a university program.

## Associate Degrees

### A.S. in Biology: Pre-Nursing Option

CRC’s Biology, Pre-nursing option offers courses which satisfy general education requirements in Life Sciences, are prerequisites for a degree in Veterinary Technology, Medical Assisting, Health Information Technology, and Nursing, and prepare students for transfer opportunities to four-year programs in nursing, physical therapy, and programs leading to careers in allied health fields.

Highlights of the program include:
* Extensive laboratory experience
* Day and evening sections of pre-nursing classes
* A friendly faculty who have studied biology in South America, the Galapagos Islands, Africa and North America
* A Mathematics, Engineering and Science Achievement (MESA) program

Note: This degree is designed for students intending to transfer to a nursing program at a 4-year college or university. It does not prepare the student for immediate employment as a nurse. Students earning a nursing degree will need to complete several lower division nursing classes after transferring.

**Catalog Date:** June 1, 2020

1Note: This degree is designed for students intending to transfer to a nursing program at a 4-year college or university. It does not prepare the student for immediate employment as a nurse. Students earning a nursing degree will need to complete several lower division nursing classes after transferring.

The Biology: Pre-Nursing Option Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Demonstrate understanding of the processes of science, the scientific method, and the relationship between scientific research and established knowledge. This includes the ability to...
- Elucidate the way in which research leads to generally accepted conclusions and the integration of new research data with the building of a body of scientific knowledge.
- Recognize that the information presented in science textbooks and other established “authorities” is the result of research conducted in the field or the lab and is based on an accumulation of data.
- Design a scientific inquiry, including use of proper controls and analyses.
- Demonstrate critical thinking skills by the analysis of data sets, recognition of the implications of perturbations to biological systems, and synthesis of information to draw conclusions.
Express themselves clearly when writing or speaking about biology, demonstrating knowledge of basic biological terminology and understanding of major biological concepts. This includes the ability to produce: • Laboratory reports which address background information, procedures, results, and analysis of data developed during a laboratory exercise or inquiry project • Essays explaining biological processes in clear and concise terms • Reports and term papers which clearly explain biological processes and elucidate current theories explaining biological phenomena

Demonstrate both content knowledge and test taking skills when completing essay, objective, and multiple choice exams. This includes the ability to: • Demonstrate problem-solving abilities in the major content areas of biology including cell biology, anatomy, physiology, genetics, ecology, and evolution. • Analyze the logic of a multiple-choice question about biology and select the correct response from among related items. • Write clear responses to essay question prompts without including extraneous information or omitting information necessary to provide a clear answer • Utilize test-taking skills such as critical analysis of information, test-time management and focused writing • Demonstrate content knowledge in the broad areas of biology including cell biology, anatomy, physiology, genetics, ecology, and evolution.

Use appropriate laboratory techniques proficiently. Pre-nursing majors lab techniques include: • Measurement (use of metric measures) • Microscopy (including histology) • Identification of unknown microorganisms • Staining of bacteria • Use of equipment used to gather physiological data on humans • Additional laboratory techniques relevant to pre-nursing majors can be found in the SLOs for the chemistry courses required for this career option.

Evaluate biological data, draw reasonable conclusions, recognize the ethical implications of these conclusions, and apply these conclusions to personal, community, and scientific problems. This includes the ability to: • Choose what data to collect in order to address a specific hypothesis • Collect data and keep organized records • Conduct basic graphical and statistical analysis of data • Reach and clearly express logical conclusions based on biological data • Relate, in presentations and/or in written reports, how biological information is relevant to personal and community issues • Recognize the ethical implications of biological research and the responsibility to use knowledge wisely

Employ information-gathering tools investigate biological ideas. This includes the ability to... • Use the Internet in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found. • Use the library in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.

Career Information

Nursing, Physician’s Assistant, Physical Therapy, etc. Some career options require more than two years of college study. Classes beyond the associate degree may be required for some career options or to fully prepare students for transfer to a university program.

A.S. in Biology

What do antibiotic resistance, hemophilia, DNA fingerprinting, sequoias, cuttlefish, intertidal zones, and global climate change have in common? These are a few examples of the diverse topics that are explored in biology, which is the scientific study of living organisms including their structure, function, evolution, and interactions with other organisms and with the environment.

Highlights of the program include:
• Extensive hands-on learning approach in laboratory courses that provide students with opportunities to use modern equipment and techniques.
• Small class sizes taught by enthusiastic biology professors who set high standards but who demonstrate how to achieve those standards.
• A high level of satisfaction with the education received at CRC is reported by students who transfer to 4-year universities.
• A Mathematics, Engineering and Science Achievement (MESA) program to help students develop academic and leadership skills.

Note to Transfer Students:
This degree is intended to prepare students for transfer to a University of California campus or other four-year institutions. It is critical that you meet with a counselor from your desired transfer institution to select and plan the courses for your major. Some UC programs may require calculus-based (not trigonometry based) physics with lab before graduation. Additionally, some UC programs may require statistics prior to graduation.

Colleges and universities vary widely in their requirements for degrees. The courses that CRC requires for an Associate’s degree may be different from the requirements for a Bachelor’s degree. Therefore, you are strongly encouraged to meet with both a CRC counselor and a counselor from your desired transfer institution in order to understand the lower division requirements for the program at the college or university you plan to attend.

Total Units: 41 - 45

The Biology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Elucidate the way in which research leads to generally accepted conclusions and the integration of new research data with the building of a body of scientific knowledge.

- Recognize that the information presented in science textbooks and other established “authorities” is the result of research conducted in the field or the lab and is based on an accumulation of data.

- Design a scientific inquiry, including use of proper controls and analyses.

- Demonstrate critical thinking skills by the analysis of data sets, recognition of the implications of perturbations to biological systems, and synthesis of information to draw conclusions.

- EXPRESS ONE’S SELF CLEARLY WHEN WRITING OR SPEAKING ABOUT BIOLOGY, DEMONSTRATING KNOWLEDGE OF BASIC BIOLOGICAL TERMINOLOGY AND UNDERSTANDING OF MAJOR BIOLOGICAL CONCEPTS. (PSLO 2)

- Produce laboratory reports which address background information, procedures, results, and analysis of data developed during a laboratory exercise or inquiry project.

- Produce essays explaining biological processes in clear and concise terms.

- Produce reports and term papers which clearly explain biological processes and elucidate current theories explaining biological phenomena.

- DEMONSTRATE BOTH CONTENT KNOWLEDGE AND TEST TAKING SKILLS WHEN COMPLETING ESSAY, OBJECTIVE, AND MULTIPLE CHOICE EXAMS. (PSLO 3)

- Demonstrate problem-solving abilities in the major content areas of biology including cell biology, anatomy, physiology, genetics, ecology, and evolution.

- Analyze the logic of a multiple-choice question about biology and select the correct response from among related items.

- Write clear responses to essay question prompts without including extraneous information or omitting information necessary to provide a clear answer.

- Utilize test-taking skills such as critical analysis of information, test-time management and focused writing.

- Demonstrate content knowledge in the broad areas of biology including cell biology, anatomy, physiology, genetics, ecology, and evolution.

- CHOOSE AND UTILIZE APPROPRIATE LABORATORY TECHNIQUES PROFICIENTLY. (PSLO 4)

- Demonstrate proficient use of measurement (use of metric measures).
• Demonstrate proficient use of microscopy.
• Demonstrate proficient use of pipetting.
• Demonstrate proficient use of gel electrophoresis.
• Demonstrate proficient use of dissection.
• Demonstrate proficient use of basic biochemical techniques such as pH testing, Biuret test, Benedict’s test, etc.
• Demonstrate the ability to design a laboratory experiment, including the use of adequate controls and choice of analyses used to examine data, etc.

EVALUATE BIOLOGICAL DATA, DRAW REASONABLE CONCLUSIONS, RECOGNIZE THE ETHICAL IMPLICATIONS OF THESE CONCLUSIONS, AND APPLY THESE CONCLUSIONS TO PERSONAL, COMMUNITY, AND SCIENTIFIC PROBLEMS. (PSLO 5)

• Choose what data to collect in order to address a specific hypothesis.
• Collect data and keep organized records.
• Conduct basic graphical and statistical analysis of data.
• Reach and clearly express logical conclusions based on biological data.
• Relate, in presentations and/or in written reports, how biological information is relevant to personal and community issues.
• Recognize the ethical implications of biological research and the responsibility to use knowledge wisely.

EMPLOY INFORMATION-GATHERING TOOLS TO INVESTIGATE BIOLOGICAL IDEAS. (PSLO 6)

• Use the Internet in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.
• Use the library in order to gather scientific information, including the ability to recognize the relevance and scientific validity (or lack thereof) of information when found.

Career Information

Research, Teaching, or Industrial Laboratory Careers in Molecular Biology, Microbiology, Biotechnology, Genetics, Wildlife Biology, Marine Biology, Pharmacy, Nutrition, Medicine, Dentistry, Veterinary, Optometry, etc. These career options require more than two years of college study. Classes beyond the associate degree may be required for career options or to fully prepare students for transfer to a university program.

A.S. in General Science

Areas of Study include:

• Physical Anthropology
• Astronomy
• Biology
• Chemistry
• Engineering
• Physical Geography
• Geology
• Physics

Eighteen (18) units of transfer level course work in science is required. Two laboratory courses must be included: one in the physical sciences and one in the biological sciences. Courses may be selected from astronomy, biology, chemistry, geology, physical geography, physical anthropology, and physics. The student, in consultation with a counselor, should choose science courses to meet his or her program, transfer, or general education requirements.

Students interested in transferring to a four-year university with a science major are encouraged to complete a science AS or AS-T degree such as Anthropology, Biology, Chemistry, Engineering, Geography, Geology, or Physics. This General Science degree may not include the majors-level transfer courses needed for many science majors. Students are strongly recommended to see a counselor for guidance.

</table>

1Courses used in A or B above will not count towards C, except units exceeding the 4 or 3 unit minimum in A and B. For example, a student completing the 5 unit CHEM 309 under B could apply 2 of those units towards C. A total of 18 science units is required.

The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- explain the core perspectives of the scientific method and apply it to at least one scientific discipline. (SLO 1)
- solve introductory problems of a conceptual and/or numerical nature of at least one scientific discipline. (SLO 2)
- accurately apply the basic vocabulary and concepts of at least one scientific discipline verbally and in writing. (SLO 3)
- recognize the use and misuse of scientific concepts in society including politics and the media. (SLO 4)

**Biology (BIOL)**

**BIOL 100 Introduction to Concepts of Human Anatomy and Physiology**
This introductory course provides an overview of the basic anatomy and physiology of all body systems. It is designed as a non-transferable course for the Medical Assisting Programs and other related programs, and may be useful for other health-related technologies and for strengthening or developing a vocabulary in human anatomy and physiology.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1: EXPLAIN THE BASIC STRUCTURE OF CELLS AND TISSUES AND THE RELEVANCE OF THIS STRUCTURE TO HUMAN PHYSIOLOGY**
  - illustrate how pH, ions, and concentration gradients influence physiological processes
  - compare and contrast the anatomy of cells in order to explain the physiology of various cells
  - apply knowledge of tissues to organs and organ systems

- **SLO 2: DEMONSTRATE A FUNDAMENTAL UNDERSTANDING OF HOMEOSTASIS AND FEEDBACK LOOPS**
  - describe the mechanisms by which the human can self-regulate
  - compare and contrast positive and negative feedback loops
  - explain how homeostatic mechanisms involve multiple organ systems

- **SLO 3: IDENTIFY ANATOMICAL STRUCTURES**
  - describe the anatomical position and demonstrate the ability to use directional terms
  - utilize proper anatomical terms to name structures in various organ systems

- **SLO 4: DETERMINE GENERAL PHYSIOLOGY OF A STRUCTURE BASED ON ANATOMICAL OBSERVATIONS**
  - analyze structural distinctions and apply concepts of cellular physiology to organs and organ systems
  - determine functional relationships among various organ systems based upon their anatomical proximity or similarity

**BIOL 102 Essentials of Human Anatomy and Physiology**

Upon completion of this course, the student will be able to:

- **SLO 1: EXPLAIN THE BASIC STRUCTURE OF CELLS AND TISSUES AND THE RELEVANCE OF THIS STRUCTURE TO HUMAN PHYSIOLOGY**
  - illustrate how pH, ions, and concentration gradients influence physiological processes
  - compare and contrast the anatomy of cells in order to explain the physiology of various cells
  - apply knowledge of tissues to organs and organ systems

- **SLO 2: DEMONSTRATE A FUNDAMENTAL UNDERSTANDING OF HOMEOSTASIS AND FEEDBACK LOOPS**
  - describe the mechanisms by which the human can self-regulate
  - compare and contrast positive and negative feedback loops
**BIOL 295 Independent Studies in Biology**

**Units:** 1 - 3  
**Hours:** 54 - 162 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
  - Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
  - Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
  - Use information resources to gather discipline-specific information.
- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
  - Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
  - Explain the importance of the major discipline of study in the broader picture of society.
- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
  - Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- **SLO #4:** Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
  - Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.
This course is a survey of major topics in the biological sciences for the non-science major with an emphasis on human biology. Units covered include cell structure and chemistry, metabolism, Mendelian and molecular genetics, genetic engineering, anatomy and physiology of humans, evolution, and ecology. Students interested in a general elective biology course are strongly advised to take either BIOL 300, BIOL 307, or BIOL 310 since some transfer institutions will provide credit for only one of the three courses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1: EXPLAIN THE BASIC MECHANISMS BY WHICH ORGANISMS MAINTAIN HOMEOSTASIS**
  - distinguish the major cellular processes (e.g. cell membrane function, cellular respiration), and explain them using the correct biological terminology.
  - diagram major structures of human anatomy and explain the basic functioning of major human organ systems.
  - analyze the impact of damage to organs or organ systems on homeostasis and the health of individuals.
- **SLO 2: DESCRIBE THE BASIC PROCESSES OF GENETICS**
  - solve simple Mendelian genetic problems and discuss the implications of transmission genetics for families.
  - describe the basic processes of molecular genetics and the implications of these processes for society.
  - evaluate issues in modern biology such as genetic engineering, biotechnology, and reproductive technologies.
  - describe the cellular basis of reproduction, including meiosis.
- **SLO 3: ELUCIDATE THE BASIC PRINCIPLES OF EVOLUTION AND BIODIVERSITY**
  - explain the basic processes of evolution and the overall mechanism by which natural selection works.
  - describe the major types of organisms and the characteristics by which they are classified and draw conclusions about the relatedness of organisms from evolutionary data.
- **SLO 4: EVALUATE THE IMPACTS OF HUMANS ON ECOSYSTEMS**
  - assess the interactions of humans with the environment and other organisms.
  - evaluate the implications of human-environment interactions for local and regional communities.
  - analyze environmental data and draw reasonable conclusions.
- **SLO 5: APPRAISE THE IMPORTANCE OF THE SCIENTIFIC METHOD AND THINK CRITICALLY ABOUT BIOLOGICAL INFORMATION RELEVANT TO PERSONAL AND COMMUNITY ISSUES.**
  - choose terminology correctly and accurately define biological terms.
  - appraise biological information from a variety of sources and evaluate its validity.
  - construct examples of the relevance of biology to specific personal and community issues.
  - demonstrate an understanding of the scientific method as applied to current issues.
  - draw reasonable conclusions from biological data and evaluate conclusions presented by others as having a scientific basis.

**BIOL 307 Biology of Organisms**
This is a general biology course focusing on a survey of the plant and animal kingdoms with an emphasis on evolution and biodiversity. The course covers the general principles of biology including: methods of science, cell organization, genetics, evolution, ecology, biodiversity, and anatomy. These principles are explored in more depth through the examination of additional topics which may include: disease and epidemiology, physiological ecology, biotechnology, population growth and regulation, ecosystem ecology, and conservation biology. The course is designed for non-science majors and is especially useful for liberal studies, elementary education, environmental studies, recreation, and similar majors. Students interested in a general elective biology course are strongly advised to take either BIOL 300, BIOL 307, or BIOL 310 since some transfer institutions will provide credit for only one of the three courses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: ARTICULATE THE IMPORTANCE OF THE DIVERSITY OF ORGANISMS TO ECOSYSTEM FUNCTIONING.
  - elucidate the characteristics used to classify organisms into major taxonomic groups.
  - compare and contrast the roles of fungi, plants, and animals in communities and ecosystems.

- SLO 2: EXPLAIN THE BASIC MECHANISMS BY WHICH ORGANISMS SURVIVE, REPRODUCE, AND EVOLVE.
  - analyze the basic processes and components of prokaryotic and eukaryotic cells.
  - compare and contrast the ways in which fungi, plants and animals solve physiological problems.
  - describe the processes by which organisms maintain homeostasis.
  - solve Mendelian genetic problems using Punnett squares, pedigrees, and similar methods.
  - describe the basic processes of molecular genetics.
  - explain the process of evolution by natural selection.

- SLO 3: UTILIZE THE SCIENTIFIC METHOD AND EVALUATE THE SCIENTIFIC VALIDITY OF INFORMATION PRESENTED BY THE MEDIA AND OTHER SOURCES
  - utilize and correctly interpret the vocabulary of biology.
  - assess the results of scientific investigations into biological questions.
  - construct and conduct simple scientific inquiries into biological questions.
  - draw reasonable conclusions from biological data.

- SLO 4: APPRAISE THE IMPORTANCE OF BIOLOGY TO PERSONAL AND COMMUNITY ISSUES AND BE ABLE TO GATHER, AND THINK CRITICALLY ABOUT, BIOLOGICAL INFORMATION RELEVANT TO ONE'S LIFE.
  - evaluate the implications of genetic biotechnology and other developing biological techniques for modern life.
  - articulate the value of biological knowledge to human populations.
  - construct examples of the relevance of biology to personal interests and community issues.
  - assess the impact of environmental processes on human communities and vice versa.

BIOL 308 Contemporary Biology
This course is a survey of biological science intended to equip the student to think and act intelligently with respect to contemporary issues in biology. Biological topics are introduced in a framework of natural selection. The course is for those not intending to major in biological sciences, particularly liberal studies majors. Genetics is a significant focus of the course, as are origin of cellular life, cellular physiology, and diversity of organisms. An optional laboratory illustrating these introduced principles is offered as a separate, one-unit course (Biol 309).

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1: UTILIZE THE SCIENTIFIC METHOD AND EVALUATE SCIENTIFIC DATA.**
  - Construct simple scientific inquiries into biological questions, demonstrating an understanding of the scientific method and experimental design.
  - Develop reasonable conclusions after analyzing biological data.
  - Evaluate the validity of scientific information presented by the media and other sources.

- **SLO 2: EXPLAIN THE BASIC BIOCHEMICAL, CELLULAR, STRUCTURAL, AND PHYSIOLOGICAL MECHANISMS BY WHICH ORGANISMS MAINTAIN HOMEOSTASIS.**
  - Demonstrate knowledge of biologically important atoms and molecules.
  - Identify major components of eukaryotic and prokaryotic cells.
  - Give an overview of major cellular processes (e.g. osmosis, cellular respiration, photosynthesis, and cell division) underlying the physiological responses of organisms.
  - Describe the processes by which organisms respond to disease, with particular reference to human health and disease processes.
  - Delineate the basics of the anatomy and physiology of major human organ systems.

- **SLO 3: DELINEATE THE BASIC PROCESSES OF GENETICS, REPRODUCTION, AND DEVELOPMENT.**
  - Solve Mendelian genetics problems using Punnett squares, pedigrees, and similar methods.
  - Describe the basic processes of molecular genetics, such as DNA replication, transcription, and translation.
  - Describe key processes of human reproduction and development.

- **SLO 4: ELUCIDATE THE BASIC PRINCIPLES OF EVOLUTION, BIODIVERSITY, AND ECOLOGY.**
  - Explain the process of evolution by natural selection.
  - Describe the major types of organisms (e.g. the kingdoms of living things).
  - Evaluate the impact of environmental processes on human communities and vice versa.

- **SLO 5: APPRAISE THE IMPORTANCE OF, AND THINK CRITICALLY ABOUT, BIOLOGICAL INFORMATION RELEVANT TO ONE’S LIFE.**
  - Utilize the basic vocabulary of biology.
  - Evaluate the implications of genetic biotechnology and other developing biological techniques for modern life.
  - Articulate the value of biological knowledge to human populations.
  - Access biological information from a variety of sources.

**BIOL 309 Contemporary Biology Laboratory**
This course is an optional laboratory accompaniment to BIOL 308. The sessions will illustrate biological phenomena and their relationship to contemporary concerns and discoveries in biology.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1: UTILIZE THE SCIENTIFIC METHOD AND EVALUATE SCIENTIFIC DATA.**
  - Make observations and formulate testable hypotheses.
  - Construct and conduct simple scientific inquiries into biological questions, demonstrating an understanding of the scientific method and experimental design.
  - Present results in the format of graphs and tables.
  - Develop reasonable conclusions after analyzing biological data.

- **SLO 2: UTILIZE STANDARD BIOLOGICAL LABORATORY TECHNIQUES AND EQUIPMENT.**
  - Understand the importance and application of the microscope to view living organisms at the cellular level.
  - Use the appropriate equipment and/or tools to record measurements in the metric system.

- **SLO 3: INTEGRATE CONCEPTS FROM "CONTEMPORARY BIOLOGY" INTO THE HANDS-ON EXPERIENCE OF THE BIOLOGICAL LABORATORY.**
  - Explore basic biochemical, cellular, structural and physiological mechanisms.
  - Delineate the processes of genetics, reproduction, and development.
  - Elucidate the principles of evolution, biodiversity, and ecology.

- **SLO 4: APPRAISE THE IMPORTANCE OF, AND THINK CRITICALLY ABOUT, BIOLOGICAL INFORMATION RELEVANT TO ONE'S LIFE.**
  - Utilize the basic vocabulary of biology.
  - Evaluate the implications of genetic biotechnology and other developing biological techniques for modern life.
  - Articulate the value of biological knowledge to human populations.
  - Access biological information from a variety of sources.

**BIOL 310 General Biology**

This is a survey of biological science with an emphasis on human biology. This course is intended for non-science majors. Topics covered include scientific inquiry, cell structure, transmission and molecular genetics, major organ systems, evolution, and ecology. Major biological principles are explored in each topic, but an emphasis is placed on human issues. The laboratory activities are designed to further investigate and illuminate each topic area. Students interested in a general elective biology course are strongly advised to take either BIOL 300, BIOL 307, or BIOL 310 since some transfer institutions will provide credit for only one of the three courses.
Upon completion of this course, the student will be able to:

- SLO1: EXPLAIN THE BASIC BIOCHEMICAL, CELLULAR, STRUCTURAL, AND PHYSIOLOGICAL MECHANISMS BY WHICH HUMANS MAINTAIN HOMEOSTASIS.
- demonstrate knowledge of biologically important atoms and molecules.
- identify major components of eukaryotic cells.
- give an overview of major cellular processes (e.g. osmosis, cellular respiration, and cell division) underlying the physiological responses of organisms.
- describe the processes by which organisms respond to disease, with particular reference to human health and disease processes.
- delineate the basics of the anatomy and physiology of major human organ systems.
- SLO2: DELINEATE THE BASIC PROCESSES OF GENETICS, REPRODUCTION, AND DEVELOPMENT.
- solve simple transmission (Mendelian) genetics problems.
- describe the basic processes of molecular genetics, such as DNA replication, transcription, and translation.
- examine current issues in modern biology, such as genetic engineering, biotechnology, reproductive technologies, stem cells, etc.
- describe key processes of human reproduction and development.
- SLO3: ELUCIDATE THE BASIC PRINCIPLES OF EVOLUTION, BIODIVERSITY, AND ECOLOGY.
- explain the mechanism of natural selection.
- describe the major types of organisms (e.g. the kingdoms of living things).
- evaluate the impact of humans on the environment and on other organisms.
- SLO4: UTILIZE THE SCIENTIFIC METHOD AND EVALUATE SCIENTIFIC DATA.
- conduct simple scientific investigations into biological questions, demonstrating an understanding of the scientific method and experimental design.
- develop reasonable conclusions after analyzing biological data.
- evaluate the validity of scientific information presented by the media and other sources.
- SLO5: APPRAISE THE IMPORTANCE OF, AND THINK CRITICALLY ABOUT, BIOLOGICAL INFORMATION RELEVANT TO ONE’S LIFE.
- utilize the basic vocabulary of biology.
- access biological information from a variety of sources.
- construct examples of the relevance of biology to specific personal and community issues.

BIOL 342 The New Plagues: New and Ancient Infectious Diseases Threatening World Health

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGRD 312 and ENGWR 300
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This course will cover general biological concepts and the epidemiology and pathology of selected pathogens such as prions, viruses, bacteria, protozoa, and helminthes threatening public health on a global scale. The course explores the influence of human behavior and activities on the emergence of new infectious agents and the re-emergence of ancient plagues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Examine the biology, pathogenesis, and transmission of infectious agents threatening global health.
Analyze the structure and function of bacteria, viral particles, fungi, helminths, protozoa, and prions.

- Compare and contrast the overall cell structure of prokaryotes and eukaryotes.
- SLO #2: Analyze how the human immune system responds to infectious agents.
- Assess the function and importance of skin, mucous membranes and normal flora.
- Evaluate the characteristics of non-specific immunity.
- Compare and contrast humoral and cell mediated immunity.
- SLO #3: Evaluate the factors leading to the emergence or re-emergence of infectious diseases worldwide.
- Compare mechanisms of genetic recombination in bacteria.
- Analyze the relevance of behavioral and social changes to the incidence of global infectious disease.
- SLO #4: Assess the various methods of control of infectious agents, including vaccination, antimicrobial therapy, behavioral, and social changes.
- Evaluate the effectiveness and discuss the history of various types of vaccinations.
- Compare and contrast the function and effectiveness of antibiotic, antiviral, antifungal and antiprotozoal therapy.
- SLO #5: Appraise the importance of the scientific method and think critically about biological and community issues.
- Assess biological information from a variety of sources and evaluate its validity.
- Construct examples of the relevance of biology to specific personal and community issues.
- Demonstrate an understanding of the scientific method as applied to current issues.
- Draw reasonable conclusions from biological data and evaluate conclusions presented by others as having a scientific basis.
- Choose terminology correctly and accurately define biological terms.

BIOL 350 Environmental Biology

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** ENGRD 312 and ENGWR 101; or equivalent skills demonstrated through the assessment process.
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area IV; CSU Area B2
- **Catalog Date:** June 1, 2020

This course provides an overview of ecosystems and natural resources. Major topics covered include ecological principles, ecosystem functioning, conservation biology, resource use and management, pollution and other human-caused environmental impacts. This course provides the background needed to understand major global and regional issues such as acid rain, global warming, hazardous waste disposal, deforestation and endangered species recovery. This course is especially useful for Environmental Science, Ecology, Recreation, and Political Science majors. Field trips, attendance at public meetings and/or a semester project may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1-APPLY THE PRINCIPLES OF ECOLOGY TO THE ANALYSIS OF INDIVIDUAL ADAPTATION, POPULATIONS, COMMUNITIES, AND ECOSYSTEMS. This includes the ability to..
- delineate the major processes involved in ecosystem structure and stability.
- utilize the basic vocabulary of ecology.
- analyze community processes, including community stability and processes involving interactions between species (e.g. mutualism, commensalism, competition, and predation).
- construct graphs describing exponential and logistic population growth and assess the factors affecting each type of population growth.
- SLO #2-EVALUATE THE IMPACTS OF INTERACTIONS OF HUMAN POPULATIONS WITH OTHER SPECIES. This includes the ability to..
- analyze the components of effective resource management.
BIOL 351 Global Climate Change

This interdisciplinary course explores the natural and human factors causing the Earth’s climate to change. Whether alarmed, skeptical, or just curious about climate change, this course will provide the scientific tools to analyze the evidence that climate change is a looming threat. Through lectures, readings, discussions and projects, students will examine the Earth’s present and past climates as well as the influence of climate on the geographical distribution of plants, animals and human societies. This course is the same as GEOG 305, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1: DEMONSTRATE AN UNDERSTANDING OF THE PHYSICAL FACTORS AFFECTING CLIMATE AND THE RESULTING GEOGRAPHIC VARIATION OF ENERGY RECEIPT, TEMPERATURE, PRECIPITATION, AND BIOMES.**
  - Explain the factors responsible for the latitudinal variation in energy receipt and its affects on global temperature and precipitation patterns.
  - Diagram the global energy balance, accounting for major sources of input and outputs, heat exchange and absorption.
  - Describe the various layers of the atmosphere and explain their role in producing the Greenhouse Effect and anthropogenic global warming.
  - Apply knowledge of meteorology as well as global oceanic circulation to hypothesize how terrestrial and marine biotic communities may be impacted by climate change.

- **SLO 2: DEMONSTRATE AN UNDERSTANDING OF HOW CLIMATE INFLUENCES THE DISTRIBUTION OF LIVING ORGANISMS.**
  - Explain the factors that determine the geographic distribution of the principal biomes.
  - Discuss the importance of physiological tolerance and species interactions in the structure, diversity, and stability of communities.
  - Use data from paleoclimatology to demonstrate how the geographic ranges of organisms may be affected by climate shifts.
  - Apply knowledge of the carbon cycle to explain the physical and biology factors that influence carbon dioxide levels in the atmosphere.
  - Outline how increasing atmospheric carbon dioxide levels may affect the acidity of oceans and the structure of marine communities.

- **SLO 3: APPLY SCIENTIFIC REASONING TO ASSESS THE EVIDENCE FOR HUMAN-INDUCED CLIMATE CHANGE.**
  - Describe how scientists collect data to determine the history of the earth’s climate and biogeography.
  - Outline how the study of paleoclimatology helps scientists predict future changes.
  - Present data that support and data that contradict the argument that current climate change is primarily due to human activities in contrast to natural forces.

- **SLO 4: ANALYZE THE COMPLEXITIES AND DIFFICULTIES IN CONSTRUCTING CLIMATE CHANGE MODELS.**
  - Diagram feedback loops involving atmospheric carbon dioxide and other greenhouse gases, albedo, photosynthesis, temperature, cloud cover, pollution, and other related variables.
  - Discuss the reasons why it is difficult to predict future climate change.

- **SLO 5: UNDERSTAND HOW CLIMATE CHANGE MAY AFFECT THEIR LIVES AND THE FUTURE OF LIFE ON EARTH.**
  - Describe the major principles of the Kyoto accord and discuss why it has failed to be adopted by major nations.
  - Identify how global warming may affect weather extremes, incidence of wildfires, availability of water, agriculture, human disease patterns, settlement patterns, economic, political stability, and other aspects of human society.
  - Outline effective short term and long term strategies for mitigating the effects of climate change.

BIOL 352 Conservation Biology
This introductory course covers biological and ecological principles involved in understanding and analyzing environmental problems and exploring scientifically sound conservation techniques. Major topics include the nature of science, basic principles of ecology, genetics and evolution, patterns of biodiversity and extinction, and the interdependence between humans and our environment. This course places emphasis on scientific processes and methodology and the application of science to conservation issues. Field trips and/or a semester project may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: APPLY BASIC PRINCIPLES OF ECOLOGY, GENETICS, AND EVOLUTION TO THE ANALYSIS OF CONSERVATION ISSUES. THIS INCLUDES THE ABILITY TO...
  - Utilize the vocabulary of biological sciences effectively.
  - Explain the basic concepts of population, community, and ecosystem ecology and apply these to the analysis of conservation issues.
  - Apply the basic concepts of population genetics and natural selection to the analysis of conservation issues.

- SLO 2: EXAMINE BIODIVERSITY IN TERMS OF THE STRUCTURE AND FUNCTION OF BIOLOGICAL SYSTEMS. THIS INCLUDES THE ABILITY TO...
  - Calculate measures of genetic and species diversity in the analysis of conservation issues.
  - Appraise patterns of community diversity and community stability.
  - Define the elements of landscape diversity and their importance for conservation.

- SLO 3: ANALYZE THE RELATIONSHIPS BETWEEN HUMAN POPULATIONS AND ECOSYSTEMS AS IT APPLIES TO THREATS TO BIODIVERSITY AND THE REDUCTION OF THOSE THREATS. THIS INCLUDES THE ABILITY TO...
  - Appraise the most common human impacts on species, communities and ecosystems.
  - Discuss aspects of economics, law, and resource consumption as these relate to impacts on conservation.
  - Evaluate the use of protected areas and ex situ conservation strategies in species conservation.

- SLO 4: USE THE SCIENTIFIC METHOD TO POSE QUESTIONS, ANALYZE INFORMATION AND INTERPRET SCIENTIFIC DATA AS APPLIED TO ENVIRONMENTAL PROBLEMS. THIS INCLUDES THE ABILITY TO...
  - Assess the results of scientific investigation into biological questions.
  - Construct reasonable conclusions from biological data.
  - Analyze conservation case studies and evaluate the effectiveness of conservation strategies.

BIOL 390 Natural History Field Study

This course will study the ecology and natural history covered in the field. Animals, plants and geology will be studied and their interrelationships investigated. The course will be offered in the appropriate area (mountains, desert or seashore and ocean). Assignments, field notes and appropriate exams/quizzes will be an integral part of the course. Lodging or campsites and some camping equipment will be provided. Students must provide their own food and some additional camping equipment. This course is ideal for future teachers, parents, resource management majors and those interested in the biological sciences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- APPLY BASIC PRINCIPLES OF BIOLOGY TO OBSERVATIONS IN THE FIELD (SLO #1).
**BIOL 400 Principles of Biology**

- **Units:** 5
- **Hours:** 54 hours LEC; 108 hours LAB
- **Prerequisite:** Chem 400 OR Chem 305 with a grade of "C" or better AND Intermediate Algebra (Math 120 or Math 125 with a grade of "C" or better, or equivalent skills demonstrated through the assessment process)
- **Advisory:** ESLR 320 and ESLW 320, OR ESL 325 with a grade of "C" or better; OR eligibility for ENGRD 310 AND ENGWR 300.
- **Transferable:** CSU; UC (1) No credit for BIOL 300 or 307 if taken after BIOL 400, 420, 430, or 431; 2) No credit for BIOL 310 if taken after BIOL 400; 3) No transfer credit for BIOL 462, if taken after BIOL 400.
- **General Education:** AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
- **C-ID:** C-ID BIOL 190; Part of C-ID BIOL 135S
- **Catalog Date:** June 1, 2020

This course introduces universal biological principles, including biological molecules, enzymes, cell structure and function, biochemistry, Mendelian and molecular genetics, ecology and evolution. BIOL 400 is recommended for science majors and students in pre-professional programs.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1:** DEMONSTRATE ABILITY TO ACQUIRE, SYNTHESIZE, EVALUATE AND PRESENT INFORMATION IN BIOLOGY.
  - demonstrate understanding of the scientific method by formulating testable hypotheses, designing experiments with appropriate controls and choices of data to collect, appropriately analyzing data including use of basic statistical analyses, and formulating conclusions supported by data.
  - demonstrate ability to use common laboratory techniques and equipment, such as measurement, light microscopes, spectrophotometers, electrophoresis, centrifuges, field sampling, and identification.
  - demonstrate understanding of appropriate use of correlational studies to gather data and to formulate conclusions when scientific experimentation is not possible.
  - present written and/or oral reports which address background information, procedures, results, and interpretation of data acquired during laboratory or field activities.
  - distinguish interpretations that are better supported from those that are less well supported.
  - acquire and synthesize information from print and electronic sources, and evaluate the information for quality, scientific validity, relevance, and bias.
  - recognize that research leads to generally accepted conclusions that gradually build a body of scientific knowledge and that the information presented in science textbooks and other established “authorities” is the result of research.
  - demonstrate the ability to respond to questions in a variety of formats (multiple choice, short-answer, essay prompts, etc.) with accurate, complete, and relevant information.
  - recognize the use and misuse of scientific concepts in society, including politics and the media.
- **SLO 2:** DEMONSTRATE KNOWLEDGE OF AND CRITICAL THINKING ABOUT BIOLOGY AT THE CELL AND MOLECULAR LEVEL.
  - apply chemistry concepts to recognize and describe the structure of biological molecules (such as DNA, RNA, proteins, carbohydrates, and lipids) and relate their structures to their functions.
  - demonstrate an understanding of basic cellular structures and functions in prokaryotes and eukaryotes.
  - analyze how the chemical composition of cell membranes leads to their specific cellular functions.
  - solve problems related to the movement of water and solutes through cell membranes.
• solve conceptual problems in cell and molecular biology such as the evaluation of the cell and molecular basis of disease, and the mechanisms of drug action.
• SLO 3: DEMONSTRATE KNOWLEDGE OF AND CRITICAL THINKING ABOUT BIOENERGETICS AND METABOLISM.
  • integrate chemical concepts to explain how cells obtain and transform energy.
  • explain how cells use enzymes, coenzymes and ATP to conduct and regulate metabolic pathways.
  • compare and contrast electron transport and the synthesis of ATP in mitochondria and chloroplasts.
• compare and contrast cellular respiration and photosynthesis, emphasizing the flow of carbon, electrons and energy and the roles of mitochondria and chloroplasts.
• solve conceptual problems such as evaluation of the effects of perturbations to metabolic systems as they might apply to agriculture, nutrition or disease.
• SLO 4: DEMONSTRATE KNOWLEDGE OF AND CRITICAL THINKING ABOUT GENES AND INHERITANCE AT THE MOLECULAR, CELLULAR, ORGANISMAL AND POPULATION LEVELS.
  • relate the structure of DNA to its ability to function as a molecule of inheritance and as a molecule that directs protein synthesis.
  • compare and contrast the organization and regulation of genes in viruses, prokaryotes and eukaryotes.
  • compare and contrast mechanisms that lead to genetic change.
• solve problems of inheritance involving 2 genes, a variety of dominance patterns, simple gene interactions, and linkage.
• explain the fundamental cellular processes involved in cell reproduction and the production of sex cells.
• solve conceptual problems such as evaluation of the effects of perturbations to genetic systems as they might apply to agriculture, nutrition or disease.
• SLO 5: CONSTRUCT RATIONAL ARGUMENTS THAT SHOW HOW THE THEORY OF BIOLOGICAL EVOLUTION EXPLAINS THE DIVERSITY, SIMILARITY AND ADAPTATION OF ORGANISMS.
  • examine critically the evidence that life has evolved.
  • explain how genetic variation is produced and maintained in populations.
  • compare and contrast mechanisms of evolutionary change including natural selection, genetic drift and non-random mating.
• show how evolutionary mechanisms lead to adaptation, diversity and similarity.
• solve problems requiring the application of principles of population genetics.
• solve conceptual problems by applying evolutionary theory to explain antibiotic resistance, patterns of human diversity, extinction, etc.
• SLO 6: EXPLAIN HOW ABIOTIC AND BIOTIC FACTORS INFLUENCE THE DISTRIBUTION AND ABUNDANCE OF ORGANISMS.
  • evaluate mathematical models that explain the factors that influence the distribution of organisms and their potential for population growth.
  • apply knowledge of species interactions to the structure and stability of communities.
  • analyze how principles of energy and nutrient flow through ecosystems influence the abundance and distribution of organisms.
  • apply ecological principles to assess the impact of human activities on ecosystems, communities and populations.

**BIOL 410 Principles of Botany**

**Units:** 5

**Hours:** 54 hours LEC; 108 hours LAB

**Prerequisite:** BIOL 400 with a grade of “C” or better

**Advisory:** ESLR 320 and ESLW 320, OR ESL 325 with a grade of “C” or better; OR eligibility for ENGRD 310 AND ENGWR 300.

**Transferable:** CSU; UC

**General Education:** AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C

**C-ID:** C-ID BIOL 155; Part of C-ID BIOL 130S; Part of C-ID BIOL 135S

**Catalog Date:** June 1, 2020

This course is an introduction to the diversity, classification, life cycles, and evolutionary trends of plants, fungi, algae, and cyanobacteria. Emphasis is on the anatomy, morphology, physiology, development, evolution, and ecology of plants. A field trip may be required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- APPLY SCIENTIFIC METHOD TO TEST HYPOTHESES AND EXPLAIN BOTANICAL PHENOMENA. (SLO 1)
  - devise hypotheses, and design and conduct experiments to scientifically test these hypotheses.
  - analyze botanical data and formulate appropriate conclusions.
  - locate and utilize botanical information from a variety of scholarly sources.
  - communicate conclusions from scientific experimentation.

- ANALYZE THE MAJOR STRUCTURES AND PATTERNS OF MAJOR BOTANICAL TAXA (CYANOBACTERIA, ALGAE, FUNGI, AND PLANTS). (SLO 2)
  - identify major anatomical and morphological structures microscopically and/or macroscopically.
  - relate structures and physiological processes to their functions using scientific principles.
  - classify organisms into their major botanical taxa (especially kingdom and phylum) based upon their major features.
  - compare and contrast the anatomy, morphology, physiology, and life cycles of major botanical taxa.
  - analyze the basic cellular processes involved in plant physiology, including photosynthesis, cellular respiration, water and inorganic nutrient uptake, transport mechanisms, water balance, and regulation of growth and development.

- EVALUATE THE SIMILARITIES, DIVERSITY, AND ADAPTATIONS OF ORGANISMS BY APPLYING THE THEORY OF EVOLUTION BY NATURAL SELECTION. (SLO 3)
  - analyze evolutionary trends among algae, fungi, and plants, especially the adaptation of photosynthetic organisms to land.
  - analyze how similarities of organisms are related to similarities in their ecological niches and evolutionary adaptations.
  - describe different mechanisms for speciation, especially the role of polyploidy in plants.

- ANALYZE PATTERNS IN THE DISTRIBUTION AND ABUNDANCE OF POPULATIONS. (SLO 4)
  - describe the major terrestrial and aquatic biomes, and explain environmental factors that influence them.
  - compare and contrast the interactions among organisms, including symbiosis, competition, predation, herbivory, and ecological succession.
  - compare and contrast flow of energy and nutrient cycling in ecosystems.
  - relate the growth and distribution of plant populations to abiotic and biotic factors.

- EVALUATE THE RELEVANCE OF BOTANICAL TAXA TO NATURAL ECOSYSTEMS AND TO HUMANS. (SLO 5)
  - analyze the roles of cyanobacteria, algae, fungi, and plants to natural ecosystems, and assess the relevance of these organisms to humans.
  - analyze current developments in plant biotechnology, and evaluate the implications for its use.
  - evaluate the impact of humans on natural populations and ecosystems, with an emphasis on plant communities.

BIOL 420 Principles of Zoology

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: BIOL 400 with a grade of "C" or better
Advisory: ESLR 320 and ESLW 320, OR ESL 325 with a grade of "C" or better; OR eligibility for ENGRD 310 AND ENGW 300.
Transferable: CSU; UC (1) No credit for BIOL 400, 420, 430, or 431
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
C-ID: C-ID BIOL 150; Part of C-ID BIOL 130S; Part of C-ID BIOL 133S
Catalog Date: June 1, 2020

This course is an introduction to zoology with particular emphasis on comparative anatomy and physiology of vertebrates and invertebrates. The basic principles of evolution, taxonomy, embryology, morphology, physiology, behavior and ecology will be covered. A field trip may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **SLO 1: DEMONSTRATE ABILITY TO ACQUIRE, SYNTHESIZE, EVALUATE, AND PRESENT INFORMATION IN ZOOLOGY.**
  - apply the perspective of the scientific method to gathering and evaluating biological information by formulating testable hypotheses, designing experiments with appropriate controls and choices of data to collect, appropriately analyzing data including use of basic statistical analyses, and formulating conclusions supported by data.
  - demonstrate ability to use common laboratory techniques such as measurement, light microscopes, dissection, field sampling, and identification.
  - present written and/or oral reports that address background information, procedures, results, and interpretation of data acquired during laboratory or field activities.
  - distinguish interpretations that are better supported from those that are less well supported.
  - acquire and synthesize information from print and electronic source, and evaluate the information for quality, scientific validity, relevance, and bias.
  - develop ability to tolerate the ambiguity and uncertainty associated with science.
  - recognize that research leads to generally accepted conclusions that gradually build a body of scientific knowledge and that the information presented in science textbooks and other established “authorities” is the result of research.
  - demonstrate the ability to respond to questions in a variety of formats (multiple choice, short-answer, essay prompts, etc.) with accurate, complete, and relevant information using appropriate subject-matter vocabulary.
  - recognize the use and misuse of scientific concepts in society, including politics and the media.
- **SLO 2: ANALYZE PATTERNS AND CAUSES OF THE DIVERSITY OF ANIMAL LIFE.**
  - explain the contributions of natural selection, genetic drift, mutation, and gene flow to the diversity, unity and history of animal life.
  - apply concepts of population genetics to detecting evolution in populations.
  - compare and contrast different mechanisms for speciation.
  - discuss macroevolutionary concepts such as how complex features evolve, adaptive radiation, and the occurrence and causes of extinction.
  - analyze evolutionary trends in animals, especially the evolution of early animal life, the origins of the major animal body plans and the transition of key groups to land.
  - outline the principles and methods biologists use to construct phylogenies.
  - integrate patterns of animal development and gene expression and show how these factors may have played major roles in animal evolution.
  - compare and contrast the anatomical, developmental and physiological characteristics of major animal phyla and use them to test proposed evolutionary relationships.
- **SLO 3: ANALYZE PATTERNS IN THE DISTRIBUTION AND ABUNDANCE OF POPULATIONS.**
  - describe the major terrestrial and aquatic biomes, and explain environmental factors that influence them.
  - discuss the short-term and long-term effects of species interactions such as mutualism, competition, and predation.
  - analyze how principles of energy and nutrient flow through ecosystems influence the abundance and distribution of animals.
  - discuss the factors that influence the structure and stability of communities.
  - apply principles of community ecology to assessing species abundance.
  - apply ecological principles to assess the impact of human activities on ecosystems, communities and populations.
- **SLO 4: IDENTIFY ANATOMICAL STRUCTURES AND EXPLAIN THEIR PHYSIOLOGICAL FUNCTIONS AND ADAPTIVE VALUES.**
  - identify major anatomical and morphological structures microscopically and dissection.
  - relate basic principles of biochemistry, cell biology and physics to understanding animal structure and function.
  - compare and contrast the major anatomical and physiological features of major animal phyla.
  - identify the characteristics of the specific ecological niches and the adaptations required by species to succeed there.
  - analyze how anatomical, physiological, and behavioral characteristics of animals are related to their ecological niches and evolutionary history.
This is an introductory course in which the basic principles of human anatomy and physiology are presented in an integrated fashion. This course covers anatomical terminology, basic organic chemistry, histology, and the integumentary, skeletal, muscular and nervous systems. Both BIOL 430 and BIOL 431 must be taken to study all of the major body systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1: EXPLAIN THE BASIC STRUCTURE OF CELLS AND TISSUES AND THE RELEVANCE OF THIS STRUCTURE TO HUMAN PHYSIOLOGY**
  - demonstrate knowledge of basic organic and inorganic chemistry as it relates to human cells
  - apply principles of electricity to membrane potentials, nervous system transmission, and muscle contraction physiology
  - illustrate how pH, ions, and concentration gradients influence physiological processes
  - compare and contrast the anatomy of cells in order to explain the physiology of various cells
  - categorize tissues by analyzing cell populations within the tissue
  - apply knowledge regarding tissues to organs and organ systems

- **SLO 2: DEMONSTRATE A FUNDAMENTAL UNDERSTANDING OF HOMEOSTASIS AND FEEDBACK LOOPS**
  - describe the mechanisms by which the human can self-regulate
  - compare and contrast positive and negative feedback loops
  - explain how homeostatic mechanisms involve multiple organ systems
  - assess the impact of pathologies on the maintenance of homeostasis

- **SLO 3: IDENTIFY ANATOMICAL STRUCTURES**
  - utilize proper anatomical terms to name structures in the integumentary, skeletal, muscular, and nervous systems
  - demonstrate the ability to use the light microscope to distinguish tissues
  - examine cadaver dissections in order to analyze relationships between organs
  - integrate lab experiences to apply knowledge of specific organ systems to human physiology

- **SLO 4: DETERMINE GENERAL PHYSIOLOGY OF A STRUCTURE BASED ON ANATOMICAL OBSERVATIONS**
  - analyze structural distinctions and apply concepts of cellular physiology to organs and organ systems
  - determine functional relationships among various organ systems based upon their anatomical proximity or similarity
This is an introductory course in which the basic principles of human anatomy and physiology are presented in an integrated fashion. This course covers the cardiovascular, respiratory, lymphatic/immune, digestive, urinary, endocrine and reproductive systems. Both BIOL 430 and BIOL 431 must be taken to study all of the major organ systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: ANALYZE VARIOUS CONTROL SYSTEMS UTILIZING THE CONCEPT OF HOMEOSTASIS
  - categorize control systems as positive feedback loops or negative feedback loops
  - diagram the relationships between different organ systems as the apply to regulation
  - assess the impact of pathologies on the maintenance of homeostasis

- SLO 2: IDENTIFY ANATOMICAL STRUCTURES
  - compare and contrast tissues using the light microscope
  - utilize proper anatomical terms to name structures of the Cardiovascular, Lymphatic, Respiratory, Digestive, Endocrine, Urinary and Reproductive systems
  - examine human cadaver dissections in order to analyze relationships among organs
  - integrate lab experiences of the Cardiovascular, Lymphatic, Respiratory, Digestive, Endocrine, Urinary and Reproductive systems to overall human physiology to apply knowledge of specific organ systems to human physiology

- SLO 3: DETERMINE GENERAL PHYSIOLOGY OF A STRUCTURE BASED ON ANATOMICAL OBSERVATIONS
  - analyze structural distinctions and apply concepts of cellular physiology to organs and organ systems
  - determine functional relationships among various organ systems based upon their anatomical proximity or similarity

- SLO 4: UTILIZE CHEMISTRY CONCEPTS TO ELUCIDATE PHYSIOLOGICAL CONCEPTS
  - relate pressure gradients to physiological processes
  - combine methods of membrane transport to explain functional capability and/or limitations within an organ system
  - compare and contrast membrane potentials of different cell populations and explain how these differences impact the physiology of the organ system

BIOL 439 Human Cadaver Dissection

Units: 1  
Hours: 12 hours LEC; 18 hours LAB  
Prerequisite: None.  
Advisory: BIOL 420 or 430 with a grade of “C” or better  
Transferable: CSU; UC  
Catalog Date: June 1, 2020

The Human Cadaver Dissection course is a one-unit, intensive course for nursing, medical, physical therapy, sonography, chiropractic, or other health-related majors. Using a regional approach, students will study the structure of the human body through the dissection of cadavers. Students will gain experience in dissection techniques, more fully understand relationships between organs, and discuss physiological concepts as they pertain to anatomy. Maintaining a detailed lab notebook is an integral part of the course. This course may be taken one time for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEVELOP DISSECTION TECHNIQUES
  - Identify and utilize appropriate dissection tools
  - Perform advanced dissections to prepare the specimens for study in other Biology courses

- SLO 2: IDENTIFY ANATOMICAL FEATURES AND EXPLORE RELATIONSHIPS AMONG STRUCTURES
  - Investigate the anatomy of the human from superficial to deep
  - Discuss physiological concepts based on anatomical relationships
BIOL 440 General Microbiology

This course introduces the concepts of microbiology with an emphasis on forms, modes of growth, cell specialization, mutual, commensal and parasitic relationships of bacteria, fungi, molds, protozoans and viruses. Topics will be correlated with medical and health applications to animals and human beings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1—Evaluate the cellular structure and function of microorganisms.
- Compare and contrast the overall cell structure of prokaryotes and eukaryotes.
- Differentiate between gram positive and gram negative bacterial cell structure.
- Analyze the structure and function of viral particles and prions.
- Demonstrate proper staining techniques and microscope use in the laboratory.
- SLO #2—Explain the basic mechanisms of microbial growth, metabolism and genetics.
- Assess how microbial growth is affected by physical and chemical agents.
- Evaluate the overall function of metabolic pathways.
- Categorize the various energy production mechanisms among organisms according to carbon source, mechanism of carbohydrate catabolism and ATP generation.
- Verify how DNA is replicated and how protein synthesis occurs.
- Compare mechanisms of genetic recombination in bacteria.
- Set up and analyze biochemical tests in the laboratory using aseptic technique.
- SLO #3—Evaluate host pathogen interactions.
- Assess the function and importance of normal flora.
- Analyze the mechanisms that microorganisms use to cause disease.
- Evaluate the characteristics of non-specific immunity.
- Compare and contrast humoral and cell mediated immunity.
- SLO #4—Apply microbiological concepts to historical and current health issues.
- Survey important milestones in the history of microbiology.
- Evaluate the significance of microbiology to the techniques of biotechnology.
- Apply microbiological concepts concerning infectious disease to clinical practice problems and case studies.
- Using principles of the scientific method, design and complete laboratory activities based on epidemiological concepts.

BIOL 462 Genetics in Contemporary Human Society

Units: 3
Hours: 54 hours LEC
Prerequisite: CSU; UC
Transferable: AA/AS Area IV; CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This course introduces the basic principles of genetics, molecular biology and their applications to human health and disease. The course will briefly cover some of the historical milestones in the field of genetics and will introduce students to the techniques of genetic manipulation. The course will be structured around a series of lab activities which will enhance students' understanding of the concepts learned in lectures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate fundamental knowledge of genetics, molecular biology and their applications to human health and disease.
- Apply basic principles of genetics, molecular biology and their applications to human health and disease.
- Use basic concepts of genetics, molecular biology and their applications to human health and disease in the laboratory setting.
- Demonstrate basic knowledge of the techniques of genetic manipulation.
- Apply basic concepts of genetics, molecular biology and their applications to human health and disease in the laboratory setting.
- Demonstrate basic knowledge of the techniques of genetic manipulation.
- Apply basic concepts of genetics, molecular biology and their applications to human health and disease in the laboratory setting.
- Demonstrate basic knowledge of the techniques of genetic manipulation.
- Apply basic concepts of genetics, molecular biology and their applications to human health and disease in the laboratory setting.
- Demonstrate basic knowledge of the techniques of genetic manipulation.
This course introduces students to the principles of modern genetics, especially as they apply to human health and society. Rapid advances in scientists’ knowledge of what genes are and how they work impact the daily life of people through genetically modified foods, DNA fingerprinting, therapies for human disease and a variety of reproductive technologies. This course includes the study of Mendelian inheritance, the roles of chromosomes and genes in human disease, how genes direct development, the relationship between genes, environment and behavior, and the contribution of genes to human diversity. Ethical, legal and social issues will be explored through class discussions and written reports. This course is primarily intended for non-biology majors; however, biology majors may enjoy the opportunity to explore human genetics in greater depth than is possible in BIOL 400.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: SOLVE GENETICS PROBLEMS BY APPLYING PRINCIPLES OF INHERITANCE.
  - Solve genetics problems by applying Mendelian principles to single and two gene problems with and without dominance.
  - Solve genetics problems involving sex linkage.

- SLO 2: INTEGRATE MOLECULAR GENETICS AND CELL BIOLOGY TO EXPLAIN THE BASIS OF HUMAN GENETIC TRAITS.
  - Relate the functions of cellular organelles to specific human genetic disorders.
  - Describe the structure and functions of DNA, RNA and proteins.
  - Relate DNA, RNA and proteins to the development of human characteristics.
  - Examine the interaction between genes and the environment.
  - Use relevant genetic concepts to assess the contribution of genetic variation and environmental variation to variation in human phenotypes.
  - Review genetic data describing human variation and explaining human origins.

- SLO 3: GATHER RELEVANT INFORMATION AND USE IT TO EVALUATE THE SCIENTIFIC VALIDITY OF INFORMATION PRESENTED BY THE MEDIA AND OTHER SOURCES.
  - Distinguish between scientific hypotheses, inferences, and speculation.
  - Identify and analyze the scientific basis of modern genetic technologies.
  - Examine current ethical and social issues in human genetics.

BIOL 485 Honors Seminar in Genetics

Same As: HONOR 385
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This course offers honors students the opportunity to study, critique, and discuss advanced topics in genetics such as genetically modified foods, whole-genome rapid sequencing, gene therapies for human disease, and a variety of reproductive technologies. Furthermore, this course includes the study of Mendelian inheritance, the roles of chromosomes and genes in human disease, how genes direct development, the relationship between genes, environment and behavior, and the contribution of genes to human diversity.

Students will engage with each other to discuss ethical, legal and social issues during class discussions, and analyze scientific literature in written reports. Enrollment is limited to Honors students. Details about the Honors Program can be found in the Catalog and on the CRC website. This course is the same as HONOR 385. This course, under either name, may be taken a total of one time for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: SOLVE GENETICS PROBLEMS BY APPLYING PRINCIPLES OF INHERITANCE.
  - Solve genetics problems by applying Mendelian principles to single and two gene problems with and without dominance.
  - Solve genetics problems involving sex linkage.

- SLO 2: INTEGRATE MOLECULAR GENETICS AND CELL BIOLOGY TO EXPLAIN THE BASIS OF HUMAN GENETIC TRAITS.
  - Relate the functions of cellular organelles to specific human genetic disorders.
Describe the structure and functions of DNA, RNA and proteins.

Relate DNA, RNA and proteins to the development of human characteristics.

Examine the interaction between genes and the environment.

Use relevant genetic concepts to assess the contribution of genetic variation and environmental variation to variation in human phenotypes.

SLO 3: RECOGNIZE THE IMPORTANCE OF GENE THERAPY, GENETIC ENGINEERING, AND BIOTECHNOLOGY ON HUMAN HEALTH.

Describe the role of genes in human diseases (like cancer).

Communicate how advances in recombinant DNA technology and biotechnology (e.g. gene therapy and genetic engineering) can be used to treat genetic diseases in humans, and modify other organisms for human use.

Understand how modern DNA sequencing and genome databases are being used to change medical practices and better human health.

SLO 4: GATHER RELEVANT INFORMATION AND USE IT TO EVALUATE THE SCIENTIFIC VALIDITY OF INFORMATION PRESENTED BY THE MEDIA AND OTHER SOURCES.

Distinguish between scientific hypotheses, inferences, and speculation.

Identify and analyze the scientific basis of modern genetic technologies.

Review current scientific literature, and evaluate the effectiveness of the research.

Present written and/or oral reports which address background information, procedures, results, and interpretation of data from scientific literature.

Examine current ethical and social issues in human genetics.

BIOL 495 Independent Studies in Biology

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

- Use information resources to gather discipline-specific information.

- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

- Explain the importance of the major discipline of study in the broader picture of society.

- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

**BIOL 498 Work Experience in Biology**

**Units:** 1 - 4  
**Hours:** 60 - 300 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Biology.  
**Transferable:** CSU  
**General Education:** AA/AS Area III(b)  
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER.(SLO 1)**
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.
- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER.(SLO 2)**
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.
- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.(SLO 3)**

**Biology - Field Studies (BIOLFS)**
Broadcast Journalism
| Cosumnes River College

This Cosumnes River College program introduces students to the field of broadcast journalism and prepares them for jobs, internships or transfer to a four-year institution.

Dean

📞 (916) 691-7170

✉️ BedfordB@crc.losrios.edu

Associate Degree

A.A. in Broadcast Journalism

This CRC program introduces students to the field of broadcast journalism and prepares them for jobs, internships or transfer to a four-year institution.

Highlights include:
* Practical experience in the digital TV studio and campus radio station
* Internship opportunities in local radio and TV stations
* Practical experience creating news packages
* Practical experience as an on-camera TV reporter/anchor or as a radio broadcaster

Note to Transfer Students:
If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

Catalog Date: June 1, 2020

The Broadcast Journalism Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Write in clear, concise English. (PSLO-1)
- Structure and craft messages in ways appropriate for specific audiences, including through a variety of technical skills for use in multi-media, internet, television, film or radio delivery. (PSLO-2)
- Research critically, filter the results, and present them in a cogent manner. (PSLO-3)
- Investigate and gather information for use in public presentation using library, internet, and personal interviews. (PSLO-4)
- Produce examples of professional-level work including writing, announcing and on-air performance. (PSLO-5)
- Demonstrate through projects that with the power of a communicator comes moral and ethical responsibility. (PSLO-6)
- Demonstrate a hands-on ability to perform the professional level critical thinking needed for work in television, radio and other media broadcasting. (PSLO-7)
- Recognize and overcome biases, prejudices and limited viewpoints (including his or her own) so that he or she can communicate effectively in a diverse world. (PSLO-8)

Career Information

Career Options News Broadcaster; Sportscaster; Announcer; News writer, News producer; Journalist; Multi-Media writer; Internet Information specialist. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.
Building Inspection Technology
| Cosumnes River College

This CRC program has been developed to prepare individuals for employment in building inspection. Graduates may be employed by contractors, government agencies, architects, finance companies and developers. A wide variety of employment opportunities exist in the fast-growing construction industry in the Sacramento Valley.

Associate Degrees

A.S. in Building Inspection Technology

This CRC program has been developed to prepare individuals for employment in building inspection. Graduates may be employed by contractors, government agencies, architects, finance companies and developers.

A wide variety of employment opportunities exist in the fast-growing construction industry in the Sacramento Valley.

HIGHLIGHTS

*Field trips to a variety of construction sites to study inspection technologies and code interpretations (Instructor Option)

*Association with instructors who are county and city building officials and inspectors

Catalog Date: June 1, 2020

**Total Units:** 39

*The Building Inspection Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.*

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Interpret the model building codes: Interpret the model building codes and summarize the origins and evolution of building codes in this country. Identify the origin and organization of the model building codes. Interpret code requirements for plans, permits and inspections. Diagnose code compliance with a minimum of 80% accuracy, congruent with industry certification. (PSLO 1)

- Analyze a set of construction drawings to determine completeness/code compliance: Analyze a set of construction drawings to determine completeness and code compliance. Develop a thorough understanding of the organization and purpose of construction drawings. Recognize deficiencies in a set of construction drawings submitted for plan review. (PSLO 2)

- Develop skills and competencies: Develop skills and competencies for effective and competitive workforce performance. (PSLO 3)

- Apply specific and measurable career and/or workforce learning objectives: Apply specific and measurable career and/or workforce learning objective through classroom study and independent assignments. (PSLO 4)

- Ensure that the program is consistent with the college SLO's: Ensure that the program is consistent with the college SLO's and is providing the students and community with a valuable and meaningful service. (PSLO 5)

### Career Information

Building Inspector; Plan Checker; Construction Supervisor; Foreman; Construction Management; Government Building Official. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

### A.S. in Fire Prevention

The fire service is one of the most dynamic employers in the country. This CRC program is designed to provide the student with updated skills and knowledge necessary to complete and successfully apply for fire service positions. The curriculum serves as an in-service program as well as a pre-employment program for students seeking employment or advancement in the profession of fire prevention.

**Catalog Date:** June 1, 2020

FT 498 | Work Experience in Fire Technology | 1 - 4

A minimum of 9 units from the following:

BIT 100 | Introduction to the International Building Code (3) | 3
BIT 102 | Plan Reading and Non-Structural Plan Review (3) | 3
BIT 104 | International Building Code - Fire & Life Safety (3) | 3
BIT 130 | Introduction to Inspection of Wood Frame Construction (3) | 3

Total Units: 25 - 28

1The student must have 1-4 units of work experience in Fire Prevention to receive a degree.

The Fire Prevention Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO #1: Comprehend the qualifications for entry level skills, the discipline and evaluation process, fire service structure, history, and culture for the field of fire prevention.
- PSLO #2: Identify and comprehend laws, regulations, codes, standards and the regulatory and advisory organizations that influence fire prevention operations.
- PSLO #3: Analyze and determine the causes of fire, extinguishing agents, stages of fire, fire development, and methods of heat transfer.
- PSLO #4: Identify and describe the common types of building construction and conditions associated with structural collapse.
- PSLO #5: Differentiate between fire detection and fire suppression systems.

Career Information

Fire Inspector, Fire Investigator, Plans Examiner, Building Inspector, Fire Prevention Specialist/Officer, Public Education Specialist/Officer, Manager, Firefighter Some Career Opportunities may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career opportunities for preparation for transfer to a university program.

Certificates of Achievement

- Interpret the model building codes: Interpret the model building codes and summarize the origins and evolution of building codes in this country. Identify the origin and organization of the model building codes. Interpret code requirements for plans, permits and inspections. Diagnose code compliance with a minimum of 80% accuracy, congruent with industry certification. (PSLO 1)

- Analyze a set of construction drawings to determine completeness/code compliance: Analyze a set of construction drawings to determine completeness and code compliance. Develop a thorough understanding of the organization and purpose of construction drawings. Recognize deficiencies in a set of construction drawings submitted for plan review. (PSLO 2)

- Develop skills and competencies: Develop skills and competencies for effective and competitive workforce performance. (PSLO 3)

- Apply specific and measurable career and/or workforce learning objectives: Apply specific and measurable career and/or workforce learning objective through classroom study and independent assignments. (PSLO 4)

- Ensure that the program is consistent with the college SLO’s: Ensure that the program is consistent with the college SLO’s and is providing the students and community with a valuable and meaningful service. (PSLO 5)

Career Information

Building Inspector; Plan Checker; Construction Supervisor; Foreman; Construction Management; Government Building Official. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

Green Buildings Certificate

The purpose of this certificate is to develop job skills and an understanding of green strategies for high performance buildings and livable communities. It is focused at students and professionals in the fields of architecture; construction; building management; construction management; building inspection; design technology; landscape; and planning, who want to acquire a comprehensive knowledge of an integrated, economic life-cycle approach to the design of the built environment. It includes study of green rating systems, material choices and environmental strategies for a livable, sustainable future.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **PSLO 1**: Establish meaningful ethical, social and environmental objectives for buildings and communities based on the values of energy and resource conscious design.
- Compare and contrast societal and economic implications of utilizing renewable and non-renewable energy sources.
- Compare and contrast the effect of contextual issues and evaluate their impact on energy consumption, environment and the beneficial experience of interior and exterior spaces.
- **PSLO 2**: Identify and articulate issues related to the choice of various building, landscape and environmental systems; ideate responsive solutions; and compare the alternatives in making effective, sustainable decisions.
- Analyze and calculate energy use to make informed, environmentally-sound and economic choices to satisfy human needs for comfort and aesthetics.
- Explain the concepts of resource conservation and waste reduction and make sustainable design choices related to materials and construction.
- Develop a comprehensive understanding of green rating systems, livable communities strategies and the ability to apply these concepts in decision-making.
- **PSLO 3**: Demonstrate independent learning, teamwork and continuing education habits that will help to encourage a life long pursuit of knowledge.
- To use a team work process to identify issues, analyze criteria, research and apply learned principles to synthesize solutions to specific design projects.
- To demonstrate habits of visual note making and independent research by developing a sketch and notebook to record learning.

Career Information
Building Inspection Technology (BIT)

BIT 100 Introduction to the International Building Code

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This basic course is designed to provide background material on which the International Building Code was founded and the legal basis for the code. Emphasis will be placed on the development and proper use of the code.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1. Interpret building codes and summarize the origins and evolution of building codes in this country.
- Identify the origin and organization of the International Building Code (IBC).
- Interpret IBC requirements for plans, permits and inspections.
- Analyze basic principles of occupancy classifications, types of construction, and occupancy load calculations in order to correctly apply the construction provisions.
- SLO #2 Apply provisions of the International Building Code.
- Describe codes governing foundations, wood structures, masonry and concrete structural elements, safety glass requirements, weatherproofing, roofing, site preparation, gypsum and plaster, and light and ventilation requirements.
- Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

BIT 101 Introduction to the International Residential Code

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This basic course is designed to provide a thorough understanding of residential construction requirements for building plan review and inspection. The course will cover the portions of the International Residential Code that have been adopted by the State of California. Emphasis will be placed on the development and proper use of the code.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1. Interpret the International Residential Code (IRC) and summarize the origins and evolution of building codes in this country.
- Understand the application and adoption of the IRC in California.
- Identify the origin and organization of the IRC.
- Interpret IRC requirements for plans, permits and inspections.
- Analyze basic principles of residential construction as they relate to foundations, floors, wall construction, wall covering, and roof and ceiling construction in order to correctly apply the construction provisions.
- SLO #2 Apply provisions of the International Residential Code.
- Describe codes governing foundations, floors, wall construction, wall covering, roof and ceiling assemblies and light and ventilation requirements.
- SLO #3 Apply inspection procedures by developing the ability to visualize various types of residential construction methods.
BIT 102 Plan Reading and Non-Structural Plan Review

This course provides a thorough understanding of the plan reading and non-structural plan review process undertaken by building departments prior to plan approval.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Analyze a set of construction drawings to determine completeness and code compliance (SLO #1).
- Develop a thorough understanding of the organization and purpose of construction drawings.
- Recognize deficiencies in a set of construction drawings submitted for plan review.
- Explain how the relationships between occupancy groups, construction types and fire protection measures, both active and passive, affect the size, height and means of egress of a structure (SLO #2).
- Understand the factors that must be considered when analyzing the code imposed limitations of buildings.
- Identify the purpose and intent of the means of egress requirements found in the building code.
- Perform simple plan reviews and understand the plans examiner's role in the plan review process (SLO #3).
- List the deficiencies found in a set of drawings.
- Articulate the modifications that are required to bring the plans into compliance with the code.
- Identify the effect that the plans examiner's performance can have on the construction project.
- Diagnose code compliance with a minimum of 80% accuracy, congruent with industry certification.

BIT 104 International Building Code - Fire & Life Safety

This course covers the use and application of the International Building Code for construction inspection.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Explain the organization, intent and purpose of the fire and life safety provisions of the International Building Code (SLO #1).
- Understand why the fire and life safety provisions of the building code are included in the International Building Code and describe the benefits derived from inclusion of these provisions.
- Locate specific sections in the International Building Code in order to provide accurate information to applicants, contractors, property owners and co-workers.
- Describe how the relationships between occupancy groups, construction types and fire protection measures, both active and passive, affect the size, height and means of egress of a structure (SLO #2).
- Understand the factors that must be considered when analyzing the code imposed limitations of buildings.
- Identify the purpose and intent of the means of egress requirements found in the building code.
- Interpret and apply the fire and life safety provision of the International Building Code while performing plan reviews and field inspections (SLO #3).
- Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

BIT 106 Introduction to Special Inspection- Concrete, Masonry, Steel, and Soils

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>

</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course covers the Special Inspection requirements of chapter seventeen (17) in the International Building Code. The course will provide the technical knowledge and information necessary for Building Inspectors to oversee and approve Special Inspections performed by Special Inspectors on concrete, masonry, structural steel and soils.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Review plans for compliance with the International Building Code in the follow areas: steel framing; masonry construction; and concrete construction, per the International Building Code and ACI – 318.
- Identify code violations in steel structural systems, masonry construction, and concrete construction at various stages of construction including reinforcement, placement, curing and finishing operations.
- Define terms and definitions of steel construction, masonry construction, concrete construction and soils evaluation and testing.
- SLO #2 Review, understand and interpret strength and durability test results as they relate to structural, masonry, concrete and steel construction.
- Analyze and review field reports for compliance with code-required inspections of structural concrete, steel, masonry construction as well as and soil compaction.
- Describe and explain strength and durability tests for concrete, masonry and structural steel.
- SLO #3 Understand the roles of the Project Engineer, Contractor, Owner, Building Official and Special Inspector as they relate to the code required special inspections.

BIT 110 Engineering and Structural Principles for Building Construction

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>

</tr>
</tbody>
</table>

This course covers the basic engineering and structural principles used in the construction industry. This course includes civil engineering, plan reading, site layout, mechanics of materials, soil fundamentals, and the construction and inspection of structural systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- (SLO #1) Explain the history of structural engineering and describe the role and responsibility of engineers and designers in the construction industry.
- Explain the importance of safety and professional ethics in the field of engineering and design.
- (SLO#2) Evaluate the structure of engineering materials used in construction to produce the desired properties and response in structural components and systems.
• Explain the development of design theories, approaches and methodology.
• Explain the concepts of loads, reaction, equilibrium, vertical shear and shear diagrams, static and stress formulas, section modules and flexure formula as they relate to structural design and review.
• (SLO #3) Define basic engineering principles and how they apply to plan review and construction inspection procedures.
• Analyze construction drawings to verify complete load path including gravity and lateral loads.
• Identify the strengths and limitations of construction materials and identify key components of structural systems.

BIT 112 Building Inspection Principles for Disabled Access

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: BIT 100
Catalog Date: June 1, 2020

This is a course designed to examine the state regulations that govern the design and construction of public buildings, publicly funded living accommodations, hotels and motels, and multi-family dwellings for individuals with mobility and sensory impairments. The course is designed specifically for building inspectors to develop knowledge and skills in disabled access inspections.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• (SLO#1) Explain the legal, social and economical importance of providing accessibility to public buildings, public accommodations, commercial buildings, publicly funded housing and non-publicly funded housing.
• (SLO#2) Explain the organization, origin, development and purpose of the Americans with Disabilities Act (ADA) and Chapters 11A and 11B of the California Building Code (Title 24).
• Explain why specific requirements are included in the accessibility provisions of the California Building Code and describe the benefits derived from inclusion of these provisions.
• Explain the function of the Certified Access Specialist Program (CASp) and describe the role a CASp inspector plays in accessibility compliance.
• (SLO#3) Locate specific sections in the California Building Code in order to provide accurate information to applicants, contractors, property owners and co-workers regarding accessibility requirements.
• Review plans and verify compliance with Title 24 accessibility requirements.
• Perform building inspections for compliance with accessibility regulations and describe common interpretations of the requirements as well as common problems that hinder compliance.
• Explain and have the ability to accurately apply the Unreasonable Hardship provision of Chapter 11B (Accessibility) in the California Building Code.

BIT 120 Mechanical I/Plumbing Code Requirements

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: CMT 300
Catalog Date: June 1, 2020

This course covers the use and interpretation of the Uniform Plumbing Code, legal and administrative enforcement procedures, field inspection techniques and procedures, methods and techniques used in plumbing installations, emerging technologies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Explain the organization, origin, development and purpose of the Uniform Plumbing Code (SLO #1).
• Understand why specific requirements are included in the Uniform Plumbing Code and describe the benefits derived from inclusion of these provisions.
Locate specific sections in the Uniform Plumbing Code in order to provide accurate information to applicants, contractors, property owners and co-workers.

Interpret the Uniform Plumbing Code in regard to regulations, minimum standards, new methods and materials used in the plumbing industry (SLO #2).

Apply inspection procedures by developing the ability to visualize various types of plumbing methods and identify code violations in installed plumbing systems at various stages of construction.

Interpret and apply the provisions of the Uniform Plumbing Code while performing plan reviews and field inspections (SLO #3).

Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

---

**BIT 121 Mechanical II / H.V.A.C. Code Requirements**

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>

<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course covers the use and interpretation of the Uniform Mechanical Code, and legal and administrative enforcement procedures used in mechanical installations, emerging trends and technologies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Explain the organization, origin, development and purpose of the Uniform Mechanical Code (SLO #1).
- Explain why specific requirements are included in the Uniform Mechanical Code and describe the benefits derived from inclusion of these provisions.
- Locate specific sections in the Uniform Mechanical Code in order to provide accurate information to applicants, contractors, property owners and co-workers.
- Interpret the Uniform Mechanical Code in regard to regulations, minimum standards, new methods and materials used in mechanical systems (SLO #2).
- Apply inspection procedures by developing the ability to visualize various types of HVAC and other mechanical systems and identify code violations in installed mechanical systems at various stages of construction.
- Interpret and apply the provisions of the Uniform Mechanical Code while performing plan reviews and field inspections (SLO #3).
- Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

---

**BIT 130 Introduction to Inspection of Wood Frame Construction**

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Advisory:</td>
<td>BIT 100</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This is a basic course designed to provide a thorough understanding of wood frame construction requirements for building plan review and inspection. The course will cover inspections for floor, roof and wall framing, and wall bracing for seismic and wind design. Simple beam calculations will be made.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Review wood framing plans for compliance with the International Building Code (SLO #1).
- Apply inspection procedures by developing the ability to visualize various types of wood framing methods.
- Identify code violations in wood structural systems at various stages of construction.
• Define wood terms and definitions of lumber for framing and simple beams (SLO #2).

• Compare and contrast lumber grades and specifications in order to verify adequacy of framing members and perform simple beam calculations.

• Understand concepts of lateral bracing both prescriptive (conventional) and designed (SLO #3).

• Understand the concept of continuous load path, both vertical and lateral, and identify key components of a wood structural system.

BIT 140 Residential Electrical Code Requirements

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Advisory:</td>
<td>BIT 100</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course includes review of basic electricity and electrical principles for building inspection. This course is limited to the electrical code requirements for residential structures. The course will cover the use and interpretation of the electrical requirements found in the International Residential Code, legal and administrative enforcement procedures, field inspection techniques and procedures, methods and techniques used in electrical installations and emerging technologies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1 Explain the organization, origin, development and purpose of the electrical requirements found in the International Residential Code.

• Describe why specific requirements are included in the electrical chapters of the International Residential Code and describe the benefits derived from inclusion of these provisions.

• Cite specific sections in the electrical chapters of the International Residential Code in order to provide accurate information to applicants, contractors, property owners and co-workers.

• SLO #2 Interpret the electrical requirements found in the International Residential Code as it applies to residential structures.

• Analyze regulations, minimum standards, new methods and materials used in the electrical industry.

• Understand electrical installations in residential structures to ensure occupant safety by effective compliance with the electrical requirements found in the International Residential Code.

• Apply inspection procedures by developing the ability to visualize various types of electrical methods and identify code violations in installed electrical systems at various stages of construction

• SLO #3 Interpret and apply the provisions of the electrical chapters of the International Residential Code while performing plan reviews and field inspections

• Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

BIT 141 Commercial Electrical Code Requirements

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Advisory:</td>
<td>BIT 140</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course is an in-depth study of the National Electrical Code (NEC) as it relates to commercial and industrial construction and includes text adopted into the California Building Standards Code (Title 24). Study will include the most critical aspects of the National Electrical Code for electrical wiring systems found in commercial and industrial installations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1 Describe the application, purpose and intent of specific requirements in the National electrical Code.
• Locate specific sections in the National Electrical Code in order to provide accurate information to applicants, contractors, property owners and co-workers.

• SLO #2 Interpret the National Electrical Code based on a thorough understanding of the code requirements in order to ensure code compliance on commercial and industrial electrical systems.

• Apply inspection procedures by developing the ability to visualize various types of electrical methods and identify code violations in installed electrical systems at various stages of construction.

• SLO #3 Interpret and apply the provisions of the National Electrical Code while performing plan reviews and field inspections of advanced electrical systems

• Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

BIT 150 California Energy Code – Building Energy Efficiency Standards

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces the interpretation and use of the California Energy Code, and legal and administrative enforcement procedures with emphasis on heating, ventilating, air conditioning and related installations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1- Understand plan and inspection procedures, as well as the organization of the California Energy Code

• Identify the origin and organization of the California Energy Code.

• Interpret California Energy Code requirements for plans, permits and inspections.

• Analyze basic principles of energy calculations in the context of plan review.

• Identify the relationship between the California Energy Code and green building rating systems.

• SLO #2- Interpret the California Energy Code as it relates to envelope, lighting and mechanical systems.

• Describe codes governing building envelope, lighting controls, use and alternatives, mechanical system efficiency.

• Describe California Energy Code compliance procedures.

• Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

BIT 152 HERS I, Field Verification and Diagnostic Testing for Code Compliance

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None.
Advisory: BIT 150
Catalog Date: June 1, 2020

This course is an introduction to the California Home Energy Rating System (HERS) and prepares students to obtain certification as a HERS I rater. The HERS I certification allows certified individuals to verify certain energy efficiency measures of newly constructed buildings and alterations to existing buildings for compliance with the California Energy Code.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1 Explain the purpose and history of the Home Energy Rating System in the State of California

• Describe the legal responsibilities of the HERS rater in the enforcement of the California Energy Code
- Explain the HERS field verification and diagnostic testing process and the roles of the Designer, Energy Consultant, Enforcement Agency, Builder, HERS provider and rater, Third Party Quality Control Program and the California Energy Commission.

- SLO #2 Analyze basic principles of energy efficiency, human comfort and heat transfer.

- Demonstrate a thorough knowledge of building components and systems that affect the efficiency of residential building including building envelope, HVAC systems, water heating, lighting and appliances.

- SLO #3 Interpret the California Energy Code as it relates to envelope, lighting and mechanical systems.

- Demonstrate a thorough understanding of code required HERS field verification and diagnostic testing including test and inspection protocols and documentation requirements.

- SLO #4 Perform all required HERS field verification and diagnostic testing to ensure compliance with the California Energy Code on Residential Alternations and Newly Constructed Homes.

- Explain the specific testing and documentation requirements for residential alterations and newly constructed homes regarding HERS verification and third party quality control programs when a builder opts to utilize sample groups.

BIT 154 California Green Building Standards Code

<table>

<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

The purpose of this course is to introduce students to the history, purpose, proper use and interpretation of the California Green Building Standards Code. The California Green Building Standards Code was adopted by the State of California in July of 2010 and continues to evolve with each new code cycle. These standards will be felt across all of the industry's occupations, from architects and designers to builders and inspectors. This course fills elective requirements in the BIT degree, as well as the Green Building Certificate.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Interpret the California Green Building Standards Code (CAL Green) and summarize the origins and evolution of California Green Building Standards in the State of California.

- Understand the organization of the California Green Building Standards Code.

- Interpret California Green Building Standards Code requirements as they relate to plan review, permit issuance and inspections.

- SLO #2 Analyze basic principles of site development, energy and water efficiency, material conservation, resource efficiency and environmental quality as they relate to the California Green Building Standards Code.

- Apply provisions of the California Green Building Standards Code.

- Describe codes governing site development, energy and water efficiency, material conservation, resource efficiency and environmental quality requirements.

- SLO #3 Identify code violations of the California Green Building Standards Code during plan review and at various stages of construction.

- Define construction terms as they relate to green building.

- Diagnose code examples with a minimum of 80% accuracy, congruent with industry certification.

- SLO #4 Understand and apply the voluntary measures found in the California Green Building Standards Code.

- Understand how the voluntary measures, also known as Tiers, can be adopted by a community as a means of achieving enhanced construction or reach levels of the code.

- Explain the process for complying with prerequisite and elective measures found in both Tier 1 and Tier 2 voluntary measures.

BIT 295 Independent Studies in Building Inspection Technology

<table>

</tbody>
</table>
An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- **SLO #4:** Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

**BIT 298 Work Experience in Building Inspection Technology**

**Units:** 1 - 4  
**Hours:** 60 - 300 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Building Inspection Technology.  
**General Education:** AA/AS Area III(b)  
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE'S CAREER(SLO 1)**
- Understand the effects time, stress, and organizational management have on performance.
- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
- Examine the career/life planning process and relate its relevancy to the student.
- Demonstrate an understanding of basic communication tools and their appropriate use.
- Demonstrate an understanding of workplace etiquette.
- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.** (SLO 2)
- Link personal goals to long term achievement.
- Display an understanding of creating a professional first impression.
- Understand how networking is a powerful job search tool.
- Understand necessary elements of a résumé.
- Understand the importance of interview preparation.
- Identify how continual learning increases career success.
- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.** (SLO 3)
Cosumnes River College's business programs are designed to provide an entrance into an exciting career. Many opportunities are available which can lead to immediate employment and/or career advancement. CRC offers a variety of degrees and certificates to meet students' present and future needs. Whether it is one class or a step toward a degree, there are a variety of options.

Associate Degrees for Transfer

A.S.-T. in Business Administration

The Associate in Science in Business Administration for Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer to baccalaureate degree programs in business administration. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Science in Business Administration for Transfer is comprised of lower division coursework typically required by CSU institutions. Students must complete the following Associate Degree for Transfer requirements (Pursuant to SB1440, §66746):

• 60 semester or 90 quarter CSU-transferable units
• the California State University-General Education-Breadth pattern (CSU GE-Breadth); OR the Intersegmental General Education Transfer Curriculum (IGETC) pattern
• a minimum of 18 semester or 27 quarter units in the major or area of emphasis as determined by the community college district
• obtain a minimum grade point average (GPA) of 2.0
• earn a grade of C or better in all courses required for the major or area of emphasis

Upon successful completion of the Associate in Science in Nutrition and Dietetics for Transfer degree requirements, students will be guaranteed admission to the CSU system with junior status and will not have to repeat lower division coursework.

Each California State University may have slightly different requirements for transfer so it is critical for students to work with their counselors to develop individual academic plans.

Catalog Date: June 1, 2020

The Associate in Science in Business Administration for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- P-SLO 1: Identify and explain the major functional areas of business organizations including management, marketing, finance, and accounting.
- P-SLO 2: Develop leadership skills that are effective in managing a multicultural workforce.
- P-SLO 3: Analyze practical business problems and utilize research and critical thinking to evaluate and recommend alternative solutions.
- P-SLO 4: Apply accounting principles and concepts in making decisions about business operations.
- P-SLO 5: Integrate management principles in relationship to finance, personnel, products, services and information.
- P-SLO 6: Communicate effectively verbally and in writing in various business settings.
- P-SLO 7: Apply commonly used computer application programs to create relevant business documents.

Career Information

Associate Degrees

A.A. in Business, General

This program provides an overview of business fundamentals for students interested in most business occupations. The program is also recommended for general government service occupations.

This degree is intended for students who wish to complete an A.A. degree in Business. Please consult with an academic counselor if you wish to obtain an A.A. degree and transfer to a CSU university as a business degree major.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- (PSLO 1) Understand and practice proper sanitation and safety procedures critical to the food service industry.
- (PSLO 2) Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation and service.
- (PSLO 3) Demonstrate effective techniques for the selection and procurement of food and non-food items used common to the food service industry.
- (PSLO 4) Demonstrate basic knowledge of cooking techniques and procedures.
- (PSLO 5) Exhibit a basic understanding of nutrition
- (PSLO 6) Demonstrate skill and comprehension in entrepreneurship as indicated by course outcomes.
- (PSLO 7) Transform an entrepreneurial idea into a viable business concept.
- (PSLO 8) Employ appropriate management, finance, accounting, and marketing techniques required in operating a business.
- (PSLO 9) Demonstrate the ability to think critically and analyze problems.
- (PSLO 10) Evaluate the feasibility of success when starting a new business venture.
- (PSLO 11) Research and compose a business plan that includes all facets of starting and managing a business.
- (PSLO 12) Express ideas and facts clearly and completely.
- (PSLO 13) Develop effective oral and written communication skills that can be applied in various business settings.

- CISC 308: Exploring Computer Environments and the Internet (1)
- BUSTEC 302: Computer-Keyboarding (2)

Total Units: 18

\(^1\)BUSTEC 304 may be replaced by keyboarding speed verification at 40 wpm or better

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **P-SLO 1: Skills/Knowledge**: Demonstrate skill and comprehension in respective subject areas as indicated by course outcomes
  - Use word processing, spreadsheet, database, presentation, and electronic communication software to effectively support the office environment.
  - Demonstrate keyboarding skills which represent industry-standard speed and accuracy

- **P-SLO 2: Critical Thinking Skills**: Demonstrate the ability to think critically and analyze problems.
  - Analyze and demonstrate effective business procedures and office management strategies
  - Incorporate technological, communication, and problem-solving skills in the business setting

Career Information

Clerk, Administrative Assistant, Office Assistant, Data-entry Specialist.

Entrepreneurship Certificate

This certificate is designed for current and potential entrepreneurs. It provides an introductory and organized course of study that enables students to develop their entrepreneurial skills, recognize opportunities, and learn the basics of starting and managing a small business.

**Catalog Date**: June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- P-SLO 1: Skills/Knowledge: Demonstrate skill and comprehension in entrepreneurship as indicated by course outcomes
- Transform an entrepreneurial idea into a viable business concept
- Employ appropriate management, finance, accounting, and marketing techniques required in operating a business.
- P-SLO 2: Critical Thinking Skills: Demonstrate the ability to think critically and analyze problems
- Evaluate the feasibility of success when starting a new business venture.
- Research and compose a business plan that includes all facets of starting and managing a business
- P-SLO 3: Communication: Express ideas and facts clearly and completely
- Develop effective oral and written communication skills that can be applied in various business settings

### Career Information
BUS 100 English for the Professional

This course is designed to prepare the student for business communication. It presents principles of correct and effective English usage as applied in business. Included are skills and techniques of written communication, sentence structure, word usage, punctuation, spelling, business vocabulary, and business document-formatting. Emphasis is placed on critical thinking and effective writing techniques through analyzing written communication and composing and organizing paragraphs into effective business documents. Computer skills are needed to format business documents and search the Internet for information. Proofreading skills are stressed throughout the course. The course is recommended for all business majors during their first semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE SKILL AND COMPREHENSION IN RESPECTIVE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES.
  - Select and use appropriate writing aids and references.
  - Prepare assignments that exhibit a clear understanding of the structure of English grammar, word usage, spelling, punctuation, and business vocabulary.
  - Analyze and evaluate business documents.
  - Produce documents that show an understanding of the essentials of the sentence as an aid to clear thinking and effective writing.
  - Compose coherent, well-developed, unified paragraphs.
- SLO 2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Assess Internet options in the search for relevant information.
  - Examine the content of and proofread written assignments.
- SLO 3: EXPRESS IDEAS AND FACTS CLEARLY AND COMPLETELY.
  - Create, revise, and edit written sentences, paragraphs, and basic business documents (using a computer).

BUS 105 Business Mathematics

This course is a review of basic mathematical skills and introduces equations and formulas in solving for unknowns. Applications of mathematics in business include such areas as banking, commercial discounts, retail and wholesale markup-markdown, payroll computations, simple and compound interest, bank discount, present value, taxes, insurance, depreciation, and financial statements. This course is recommended for every major in business.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE SKILLS AND COMPREHENSION IN BUSINESS MATHEMATICS (AS INDICATED BY COURSE OUTCOMES).
  - Use and derive formulas and equations in the solution of unknowns.
  - Demonstrate skill in the business use of mathematics through a variety of applications.
Develop accuracy, neatness, thoroughness, promptness, and speed as desirable work habits.

SLO 2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.

Demonstrate the ability to analyze thought problems pertaining to business mathematics and to solve them.

BUS 215 Entrepreneurial Opportunity and Business Planning

This course provides students with insight and knowledge into developing their entrepreneurial opportunity and creating a business plan for it. Students will research entrepreneurial ideas and determine how to turn an idea into a successful startup enterprise given the current and anticipated demographic, technological and social climates. Students will also be offered an organized, step-by-step approach to preparing a business plan. Once students are able to assess the feasibility of their own business ideas based on their personal strengths, skills, and financial goals, they will develop and produce a comprehensive business plan. Students will analyze the organization and management of a new business and map out how to execute a new business venture. The plan will enable the students to solve problems "on paper" before they become operational or money problems.

Students with little entrepreneurial experience or have business idea they would like to pursue will benefit from this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate the ability to develop an entrepreneurial idea into a viable business concept. This includes the ability to
  - Determine the feasibility of a business idea.
  - Assess the marketability and acceptability of a business idea by the prospective consumers.
- SLO 2: Demonstrate the skills to research the requirements of starting a small business. This includes the ability to
  - Identify the legal, financial, and human resource needs for a new business.
  - Understand how a business concept might be affected by the current and anticipated demographic, technological, and social climates.
- SLO 3: Demonstrate the skills to produce and develop a business plan for a new business venture. This includes the ability to
  - Determine the essential elements of a business plan.
  - Identify target markets and project start-up, monthly, and yearly costs.
- SLO 4: Demonstrate the ability to think critically, develop alternatives, and analyze solutions for a new business. This includes the ability to
  - Anticipate how uncontrollable variables in the environment might affect the new business.
  - Develop contingency plans to navigate through ambiguous situations.

BUS 295 Independent Studies in Business

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

Use information resources to gather discipline-specific information.

SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

Explain the importance of the major discipline of study in the broader picture of society.

SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

BUS 300 Introduction to Business

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU; UC |
| C-ID: | C-ID BUS 110 |
| Catalog Date: | June 1, 2020 |

This course provides a survey of all business areas, including accounting, law, human resources, management, marketing, economics and finance. The course is designed to be taken by all beginning students interested in business. It is a core requirement for business majors. This course provides an overview often very helpful in assisting students’ selection of a specific career in the field of business.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE SKILL AND COMPREHENSION IN MAJOR ENVIRONMENTAL FACTORS PERTAINING TO BUSINESS.
  This includes the ability to describe the economic, social, legal, and governmental environments and how they might affect business operations.

- SLO 2: DEMONSTRATE UNDERSTANDING OF MAJOR FUNCTIONAL AREAS OF BUSINESS.
  This includes the ability to identify and describe the functional units such as management, marketing, finance, accounting, and human resources in a typical business organization.

- SLO 3: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  This includes the ability to critically analyze business problems and utilize critical thinking to develop alternative solutions.

- SLO 4: APPLY COURSE CONCEPTS TO THE REAL WORLD OF BUSINESS.
  This includes the ability to connect business theories to practice and recognize the need to deal with ambiguous situations.

BUS 310 Business Communications
This course is designed to emphasize the use of communication theory in planning and composing various types of effective business letters and reports. The course stresses style, appearance, grammar, punctuation, tone, vocabulary and reader appeal. Interpersonal communication and listening, cross-cultural communication, electronic communication technology, and ethical and legal guidelines are included. A formal report with graphics is required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Compose and write effective letters and memorandums.
  - Critique written documents for clarity and effectiveness in the message.
  - Demonstrate appropriate business writing style, document appearance, grammar usage, and writing mechanics.
  - Research and incorporate sources effectively and meaningfully in a formal business report (including graphics).
- SLO 2: EXPRESS IDEAS AND FACTS CLEARLY AND COMPLETELY.
  - Write, revise, and edit professional business documents.
  - Create reports for business and other organizations.

BUS 320 Concepts in Personal Finance

This course is designed to assist individuals in analyzing their financial affairs. Elements and conceptual basis of financial planning, analysis, and decision making in areas of budgeting, taxes, borrowing, money management, insurance, investments, and retirement will be examined with an emphasis on principles to develop students' economic decision making. Students will be using mathematical concepts as well as reading and interpreting written and oral instructions. The course provides a solid base for a career in financial planning services. This course is the same as ECON 320, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: DEMONSTRATE COMPREHENSION IN ECONOMIC PRINCIPLES AND PLANNING, AS INDICATED BY COURSE OUTCOMES OF THE SUBJECT AREA.
  - Apply economic principles and concepts of individual economic planning.
- SLO #2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Analyze the changing economic environment.
  - Describe the conceptual basis of various economic tools available to the individual as well as the terminology used in their development and implementation.
  - SLO 2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Analyze the conceptual basis of various economic tools available to the individual as well as the terminology used in their development and implementation.
  - Evaluate economic needs and goals and design financial models to achieve them.
BUS 330 Managing Diversity in the Workplace

This course examines the leadership skills and abilities needed to manage a multicultural workforce. A primary focus is placed upon the workplace impact of various historical, social, and cultural experiences/perspectives related to gender, age, ethnicity, and disability. Workforce issues related to the diversity of the American consumer and global consumer impact on the United States are analyzed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EXAMINE AND DEMONSTRATE APPROPRIATE RESPONSES TO KEY DIVERSITY ISSUES IN THE WORKPLACE.
  - Define culture within the context of the United States workplace.
  - Identify leadership skills and abilities that are effective in managing a multicultural workforce.
- SLO 2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Analyze demographic trends in order to determine possible future directions in the United States workforce.
  - Analyze how language, gender, race, ethnicity, and organizational culture interact to produce an organizational climate.
  - Analyze the impact of cultural, historical, and stereotypical perspectives on the workplace.

BUS 340 Business Law

This course focuses on the law and its relationship to the environment of business. The course covers the legal system; court process and procedures; alternative dispute resolution; government regulation of business; constitutional law; contracts, both under the common and the Uniform Commercial Code (U.C.C.); torts; business organizations; property rights; and agency and employment law. While covering a broad range of substantive laws related to business, the course also stresses critical thinking and analytical evaluation of legal issues surrounding business including ethics and social responsibility.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate the ability to understand important legal principles, concepts, and terminology, and to explain how they affect the environment of business and societal interactions.
  - Understand the state and federal court systems, jurisdiction, methods for alternative dispute resolution, and the operation of the court system process, including the role of the judge, jury, lawyers, and parties to the action. Show familiarity of the appellate process, types of motions, rulings, judgments and enforcement of judgments.
  - Describe the Constitutional basis for state and federal government regulation of business.
  - Distinguish between torts and crimes and describe the purpose of criminal and tort law, including an understanding of intentional torts, negligence, business torts, strict liability, product liability, and the arguments for and against tort reform.
  - Understand the elements of a valid contract, when a promise becomes enforceable, contractual performance requirements, and the remedies available in the event of breach. Distinguish between contracts governed by the Uniform Commercial Code and those governed by the common law of contracts.
  - Describe the concept of agency, including how agency relationships are formed, duties of the agent and principal, and the liability of the parties in contract and tort.
Identify and describe the different business organizational structures available to an entrepreneur including sole proprietorships, partnerships, limited partnerships, limited liability partnerships, limited liability companies, and corporations. Understand the key differences, including liability, to owner/shareholders, tax considerations, ease of creation and capitalization requirements.

SLO 2: Demonstrate the ability to think critically and analyze problems so as to be able to apply legal concepts to real and hypothetical business related legal issues.

Analyze cases to identify issues and apply the appropriate legal rules to the fact patterns to reach defensible legal conclusions. Demonstrate the ability to utilize the internet and other media to research legal issues.

SLO 3: Assess the relationship between ethics and law and understand the nature of law and its importance to our society.

Explain the social, political and ethical implications of law and its application to actual and hypothetical business scenarios with an understanding of corporate social responsibility, stakeholder relationships, and ethical business practices and decision making.

**BUS 345 Law and Society**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area V(b); CSU Area DB; IGETC Area 4G  
**Catalog Date:** June 1, 2020

This course is an introduction to the American legal system emphasizing the nature, purpose, sources and functioning of American law but including some comparative analysis of other historical and contemporary legal systems. It stresses the evolution of legal concepts as a reflection of the social environment and the role of the judiciary. A theoretical rather than practical viewpoint is used through analysis of selected cases and legislation in the areas of individualism, socioeconomic groups, the family, the economy, crime, criminal procedure and punishment, church and state separation, the environment, and torts. This course should not be taken in place of BUS 340 when required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE SKILL AND COMPREHENSION IN RESPECTIVE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES PERTAINING TO BUSINESS LAW.
- Develop an understanding of the law as an evolutionary, stabilizing, and reforming factor in human affairs with, however, certain limitations as an instrument of social control.
- Develop an understanding of the magnitude and vitality of the law and the ways in which history, economics, sociology, psychology, and technology have influenced and have been influenced by the law.
- Develop an understanding of the basic organization and operation of the American judicial system.
- Develop an understanding of the Anglo-American Common Law System; its historical origin; some of its fundamental concepts; and the complexities inherent in such a multifaceted institution.
- Develop an understanding of the nature and purpose of law in society.
- SLO 2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
- Develop an understanding of the role of logic, critical analysis, imagination, and creativity in the study and application of the law and the legal process.

**BUS 350 Small Business Management/Entrepreneurship**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This class provides an overview of the various elements involved in starting and operating a small business. It introduces such topics as developing a business plan, finding financial resources, developing personal and business goals, meeting legal requirements, understanding marketing concepts, and other topics of interest to the entrepreneur.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Analyze the impact of various legal requirements and government regulations as related to the operation of the small business.
  - Apply principles of management and marketing relevant to the small business.
- SLO 2: DEMONSTRATE SKILL AND COMPREHENSION IN RESPECTIVE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES PERTAINING TO SMALL BUSINESS MANAGEMENT.
  - Explain the importance of a business plan, a financial plan, and a marketing plan.
  - SLO 3: EXPRESS IDEAS AND FACTS CLEARLY AND COMPLETELY.
  - Evaluate various financial reports.

This course provides students with an overview of what it takes to be successful in business through implementation of group projects and business leadership practices. Students will complete community-based business projects, focusing on business and project planning, team building, communications, preparing and processing information, and leadership. Students will plan, implement, and evaluate each project and then compose an annual report and deliver a professional presentation that will be evaluated by a selection of industry and business leaders at a regional competition, Students in Free Enterprise (SIFE). Students receive instruction in the areas of entrepreneurship, small business management, business planning, project management, oral and written presentation skills. This course emphasizes activities and techniques that develop competencies needed to become a successful business leader. This course is designed to prepare students for the SIFE competition; therefore it may be taken a maximum of four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: PRACTICE HIGH ETHICAL STANDARDS IN ALL CONTACTS WITH EMPLOYERS, CLIENTS, CO-WORKERS AND GENERAL PUBLIC.
  - Develop the leadership, team building, and entrepreneurship skills necessary to complete community-based projects.
- SLO 2: DEMONSTRATE SKILL AND COMPREHENSION IN RESPECTIVE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES.
  - Identify the skills and tools that are needed for project management including project design, implementation, documentation, and control.
  - Compose and deliver presentations using computer software presentation programs and tools.
  - SLO 3: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Organize resources and participate in regional and national competitions.
  - SLO 4: EXPRESS IDEAS AND FACTS CLEARLY AND COMPLETELY.
  - Create a written business annual report.

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- **SLO #4:** Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

BUS 498 Work Experience in Business

**Units:** 1 - 4
**Hours:** 60 - 300 hours LAB
**Prerequisite:** None.
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Business.
**Transferable:** CSU
**General Education:** AA/AS Area III(b)
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED TO ONE’S CAREER,(SLO 1)**
- Understand the effects time, stress, and organizational management have on performance.
- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
- Examine the career/life planning process and relate its relevancy to the student.
- Demonstrate an understanding of basic communication tools and their appropriate use.
- Demonstrate an understanding of workplace etiquette.
- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER,(SLO 2)**
- Link personal goals to long term achievement.
- Display an understanding of creating a professional first impression.
- Understand how networking is a powerful job search tool.
- Understand necessary elements of a résumé.
- Understand the importance of interview preparation.
- Identify how continual learning increases career success.
- DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)

Business Technology (BUSTEC)

BUSTEC 101 Computer Keyboarding: 10-Key

| Units: | 1 |
| Hours: | 18 hours LEC |
| Prerequisites: | None. |
| Catalog Date: | June 1, 2020 |

This course introduces the numeric keypad and develops the ability to key information into a computer with speed and accuracy.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE THE ABILITY TO OPERATE A NUMERIC KEYPAD BY TOUCH.
- Develop speed and accuracy on timed tests at a rate of at least 6,000 keystrokes per hour with 98% accuracy on all timings.
- Use a numeric keypad to accurately add, subtract, multiply and divide problems with whole numbers and decimals.
- Apply techniques of 10-key operation to job-related tasks.

BUSTEC 110 Business Procedures for Professional Success

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisites: | None. |
| Advisory: | BUSTEC 302 or equivalent, BUSTEC 303 and BUS 100 |
| Catalog Date: | June 1, 2020 |

This course develops skills associated with the business professional, including specialized procedures in electronic workplaces. Students learn critical thinking, problem solving, teamwork, supervision skills, administrative procedures, and information-processing technologies. Specific areas include the 21st century workplace; business technology; business communication; records management; meetings, travel, and financial documents; and the business professional's career. The course emphasizes developing a work-site team through effective communications; dependability, interpreting various management responsibilities, and motivational techniques. Recommended for all management information science and business students.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: PRACTICE HIGH ETHICAL STANDARDS IN ALL CONTACTS WITH EMPLOYERS, CLIENTS, CO-WORKERS AND GENERAL PUBLIC.
  - Demonstrate knowledge of the changing workplace, the work-site team and environment, and ethical behavior.
  - Demonstrate independent initiative and carry out oral and written instructions; correctly prioritize work responsibilities; and use wise judgment and discretion without continuous review.

- SLO 2: DEMONSTRATE SKILL AND COMPREHENSION IN RESPECTIVE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES.
  - Demonstrate administrative support skills pertaining to mail, meeting and conference planning, travel arrangements, and financial assistance.
Demonstrate knowledge of computer applications and electronic technology.

- SLO 3: EXPRESS IDEAS AND FACTS CLEARLY AND COMPLETELY.
- Compose and key business documents.
- SLO 4: PRACTICE PROFESSIONAL STANDARDS IN THE WORKPLACE.
- Exhibit a professional, business-like manner.

**BUSTEC 120 Skills for Today's Office**

</tbody>
</table>

This is a course designed to build upon previous wordprocessing and spreadsheet training in the computer science/business area, and complete the training necessary to perform effectively and become a skilled employee in the modern, computerized office. The course includes preparing and processing information: wordprocessing, spreadsheet, and database documents; communicating via fax, e-mail, voicemail, Internet, and telephone; and using copiers and other office equipment. Students will simulate office situations. This course emphasizes activities and techniques that enhance competencies needed in today's office.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE OFFICE AND COMPUTER SKILLS AND COMPREHENSION IN THE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES.
  - Use various methods to send office correspondence.
  - Apply telephone techniques and use voice mail.
  - Use e-mail to send and receive messages and to attach documents.
  - Use fax machines, copiers, and other office equipment.
  - Describe a typical practical experience in a typical office situation.
  - Create, format, and edit various office documents using word processing, spreadsheet and database programs.

This intensive introductory computer-keyboard course emphasizes operating alphabetic, numeric, and symbol keys by touch. It includes computer-keyboarding techniques, speed-and-accuracy development, proofreading proficiency, communication skills, essential computer-keyboarding information, and use of basic features of a current office level word processing program. Workplace etiquette and common organizational duties are introduced and reinforced throughout the course. This course is not open to students who have received credit for BUSTEC 306.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE SKILL AND COMPREHENSION IN RESPECTIVE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES.
  - Demonstrate alphabetic-, numeric-, and symbol-key skill using features of a current office-level word processing program.
  - Key 30 or more words a minute with three or fewer errors on a three-minute timed writing.
  - Demonstrate an understanding of computer-keyboard equipment and technical information.
- Interpret and apply oral and written instructions.
- Describe the ergonomics required to use the keyboard properly and apply proper techniques to develop computer-keyboard skill.
- SLO 2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
- Describe the main functions you would need to use as a professional in a workplace setting.

BUSTEC 303 Computer-Keyboard Formatting

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | BUSTEC 302 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This intensive computer-keyboard formatting course emphasizes application of the following formatting concepts: horizontal and vertical centering, business letter styles, memorandums, tables, and reports. The course includes developing proofreading proficiency, reinforcing communication skills, developing speed and accuracy, and using the features of a current office-level word processing program. Workplace etiquette and common organizational duties are introduced and reinforced throughout the course. This course is not open to students who have received credit for BUSTEC 306.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EXPRESS IDEAS AND FACTS CLEARLY AND COMPLETELY.
- Explain basic document-format concepts.
- SLO 2: DEMONSTRATE SKILL AND COMPREHENSION IN RESPECTIVE SUBJECT AREAS AS INDICATED BY COURSE OUTCOMES.
- Set up multiple-column tables (with main, secondary, and column headings; total columns; and source notes).
- Produce a report with side headings, references, and a title page.
- Demonstrate the ability to collaboratively work as a productive member of a team (simulation project).
- Demonstrate the ability to function as a professional in a workplace setting.
- Demonstrate an understanding of computer-keyboard equipment, technical concepts, and proper use of a current office-level word processing program.
- Demonstrate the ability to format and produce a one-page business letter, a personal-business letter, a memorandum, and envelopes.

BUSTEC 304 Computer-Keyboard Speed-and-Accuracy Building

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | BUSTEC 302 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course builds upon previous computer-keyboard skills and stresses speed-and accuracy techniques. It includes skills assessment and individually prescribed improvement plans. The student will be reading and interpreting written and oral instructions. Students who feel that they have skills equivalent to the prerequisite are encouraged to apply for credit by examination for BUSTEC 302.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE THE ABILITY TO IMPROVE COMPUTER-KEYBOARDING SKILLS
- Assess speed and accuracy on 2- and 5-minute timed writing.
• Improve speed and accuracy through individually prescribed drills.
• Demonstrate an accuracy rate of 0-2 errors on a 2-minute timed writing.
• Demonstrate an accuracy rate of 0-5 errors on a 5-minute timed writing.
• Demonstrate increased keyboarding speed of 4-10+ words a minute on a 2-minute timed writing.
• Demonstrate increased keyboarding speed of 4-10+ words a minute on a 5-minute timed writing.
• SLO 2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS
• Demonstrate the ability to interpret and apply oral and written directions.
Chemistry | Cosumnes River College

A series of chemistry courses designed to meet transfer requirements for chemical, physical and biological science majors. A series of courses intended for students majoring in fields other than chemistry, biology, or physical science. A course designed specifically for students who require preparation or review of the more basic chemical concepts. All chemistry courses at CRC include a practical component where students conduct hands-on chemical experimentation in a modern, well-equipped laboratory.

Dean
Kathryn Sorensen

SorensK@crc.losrios.edu

Associate Degrees

A.S. in Chemistry

The Chemistry Program at CRC consists of: a series of courses designed to meet transfer requirements for chemical, physical and biological science majors; a series of courses intended for students majoring in fields other than chemistry, biology, or physical science; and a course designed specifically for students who require preparation or review of the more basic chemical concepts.

All chemistry courses at CRC include a practical component where students conduct hands-on chemical experimentation in a modern, well-equipped laboratory.

HIGHLIGHTS
* An outstanding chemistry faculty striving to maintain an excellent and well-respected chemistry program
* Ample contact with the instructor and the relaxed atmosphere that only a limited class size can offer
* A Mathematics, Engineering and Science Achievement (MESA) program

This degree is designed to meet common lower division requirements for a major in chemistry.

The Chemistry Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Career Information
Biochemist; Chemist; Pharmacist; Chemical Engineer; Chemical Technology; Physician; Dentist; Veterinarian; Allied Health Professional; Biologist; Physicist; Geologist; Geochemist; Oceanographer. Some career options require more than two years of college study. Classes beyond the associate degree may be required to fully prepare students for transfer to a university program.

A.S. in General Science
Areas of Study include:

- Physical Anthropology
- Astronomy
- Biology
- Chemistry
- Engineering
- Physical Geography
- Geology
- Physics

Eighteen (18) units of transfer level course work in science is required. Two laboratory courses must be included: one in the physical sciences and one in the biological sciences. Courses may be selected from astronomy, biology, chemistry, geology, physical geography, physical anthropology, and physics. The student, in consultation with a counselor, should choose science courses to meet his or her program, transfer, or general education requirements.

Students interested in transferring to a four-year university with a science major are encouraged to complete a science AS or AS-T degree such as Anthropology, Biology, Chemistry, Engineering, Geography, Geology, or Physics. This General Science degree may not include the majors-level transfer courses needed for many science majors. Students are strongly recommended to see a counselor for guidance.

### COURSE CODE | COURSE TITLE | UNITS
--- | --- | ---
PHYS 380 | Introductory Physics - Electricity and Magnetism, Light and Modern Physics (5) |  
PHYS 411 | Mechanics of Solids and Fluids (4) |  
PHYS 421 | Electricity and Magnetism (4) |  
PHYS 431 | Heat, Waves, Light and Modern Physics (4) |  

Total Units: 18

Courses used in A or B above will not count towards C, except units exceeding the 4 or 3 unit minimum in A and B. For example, a student completing the 5 unit CHEM 309 under B could apply 2 of those units towards C. A total of 18 science units is required.

The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- explain the core perspectives of the scientific method and apply it to at least one scientific discipline. (SLO 1)
- solve introductory problems of a conceptual and/or numerical nature of at least one scientific discipline. (SLO 2)
- accurately apply the basic vocabulary and concepts of at least one scientific discipline verbally and in writing. (SLO 3)
- recognize the use and misuse of scientific concepts in society including politics and the media. (SLO 4)

---

### Chemistry (CHEM)

#### CHEM 300 Beginning Chemistry

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | MATH 100 or 102 with a grade of "C" or better |
| Advisory: | Completion of or concurrent enrollment in MATH 120. |
| Transferable: | CSU; UC (1) No credit for CHEM 300 if taken after 305 ) |
| General Education: | CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C |
| C-ID: | C-ID CHEM 101 |
| Catalog Date: | June 1, 2020 |

This course covers an introduction to fundamental chemical concepts, problem-solving and laboratory skills. CHEM 300 is designed for students needing a comprehensive review of or intensive preparation in chemistry. This course is primarily intended to prepare students for CHEM 400.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES
- recognize types of matter, and explain macroscopic observations in terms of the basic properties and theories of matter
- distinguish the three states of matter
- apply the basic terminology and nomenclature of inorganic chemistry
- relate the properties of the elements to their relative positions on the periodic table
- develop a general knowledge of the atom with an understanding of electrons, protons, neutrons, and atomic orbitals, and how they relate to chemical bonding and structure
- develop a basic knowledge of the concepts of chemical bonding and chemical reactivity
- predict the geometric shape and structure of basic inorganic compounds
demonstrate an understanding of basic chemical equilibria, and use LeChatelier's Principle

predict solubility of ionic compounds, distinguish between soluble and insoluble compounds, and illustrate the effects of both solvent and solute properties on solubility

describe the colligative properties of solutions, qualitatively predicting their changes in freezing point, boiling point, vapor pressure, and osmotic pressure

recognize acids and bases and list their properties

SLO #2: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT

use calculators, tables of reference values, and mathematical manipulation to solve chemical problems, and express answers in both regular decimal formats and scientific notation

solve problems by dimensional analysis

write balanced chemical equations and perform stoichiometric calculations

apply chemical principles such as percent yield to predict expected outcomes of chemical reactions, including acid/base reactions, redox reactions, and precipitation reactions. Discuss actual versus expected yields, distinguishing potential sources of differences in percent yields

calculate the percent composition and determine the empirical and molecular formulas of compounds

solve chemical calculation problems that involve solids, solutions, or gases, clearly and logically; for example, calculate pressure or volume of a gas, solubility, solution concentrations, and results of titration

organize large quantities of information in logical patterns

SLO #3: COMMUNICATE EFFECTIVELY, BOTH ORALLY AND IN WRITING

write a logical, complete setup for each chemical calculation, that details the method used

demonstrate proper collection and recording of scientific measurements, with the correct units and number of significant figures (i.e. measuring mass, volume, temperature, length, and pressure)

demonstrate the recording and evaluation of observations (physical and chemical changes and properties)

SLO #4: WORK SAFELY IN A LABORATORY ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES

observe basic chemistry laboratory safety practices

apply both chemical deduction and scientific method to the solving of problems in a laboratory environment

demonstrate basic laboratory techniques, including following written directions from a laboratory manual, measuring, pipetting, graphing, titration, synthesis, writing observations of physical changes, writing observations of chemical changes, filtration, neutralization, qualitative analysis, calorimetry

apply an understanding of the importance of significant figures and appropriate measurement units to all chemical calculations based on laboratory-obtained data

calculate non-measured information based on that data, such as the concentration of an unknown solution, or the specific heat capacity of an unknown metal

draw sound conclusions from collected data and observations

analyze sources of experimental error

analyze individual and group data as well as scientific literature to determine the validity, precision and accuracy of results obtained from experimental data. Calculate percent error and perform statistical analyses including standard deviation

conclude laboratory experiments after receiving both written and verbal instructions, in a safe manner within time lines established by the instructor

SLO #5: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY

welcome constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate

acknowledge past and present contributors to the field of chemistry and credit another's idea and data with appropriate reference
CHEM 305 Introduction to Chemistry

This is a general chemistry course intended for students majoring in the allied health fields, such as nursing, physical therapy, dental hygiene, veterinary technology, and environmental technology. This course emphasizes the fundamental principles of chemistry: types of matter, physical and chemical processes, atomic and molecular structure, stoichiometry, properties and theories of gases, properties of solutions, acids and bases, equilibria, oxidation-reduction and an introduction to organic functional groups as they pertain to medicine or biological systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES**
  - recognize types of matter, and explain macroscopic observations in terms of the basic properties and theories of matter
  - distinguish the three states of matter
  - apply the basic terminology and nomenclature of inorganic chemistry
  - recognize some basic functional groups in organic chemistry and write simple formulae
  - relate the properties of the elements to their relative positions on the periodic table
  - develop a general knowledge of the atom with an understanding of electrons, protons, neutrons, and atomic orbitals, and how they relate to chemical bonding and structure
  - develop a basic knowledge of the concepts of chemical bonding and chemical reactivity
  - predict the geometric shape and structure of basic inorganic and organic compounds
  - demonstrate an understanding of basic kinetics, and some elements of thermochemistry and equilibria
  - predict solubility of ionic compounds; distinguish between soluble and insoluble compounds, and illustrate the effects of both solvent and solute properties on solubility
  - describe the colligative properties of solutions, qualitatively predicting their changes in freezing point, boiling point, vapor pressure, and osmotic pressure
  - recognize acids and bases and list their properties
  - develop a basic understanding of nuclear chemistry and its applications in medicine
  - assess the importance and application of chemistry in Life Sciences and Allied Health

- **SLO #2: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT**
  - solve problems by dimensional analysis
  - write balanced chemical equations and perform stoichiometric calculations
  - apply chemical principles such as percent yield to predict expected outcomes of chemical reactions, including acid/base reactions, redox reactions, and precipitation reactions. Discuss actual versus expected yields, distinguishing potential sources of differences in percent yields
  - solve chemical calculation problems that involve solids, solutions, or gases, clearly and logically; for example, calculate pressure or volume of a gas, solubility, solution concentrations, and results of titration
  - perform basic calculations involving heat energy transfers in physical changes or chemical reactions; for example, determine the calories transferred or specific heat capacity
  - organize large quantities of information in logical patterns

- **SLO #3: COMMUNICATE EFFECTIVELY, BOTH ORALLY AND IN WRITING**
  - write a logical, complete setup for each chemical calculation, that details the method used

**Units:** 5
**Hours:** 72 hours LEC; 54 hours LAB
**Prerequisites:** MATH 100 or 102 with a grade of "C" or better
**Transferable:** CSU; UC (1) CHEM 305, 306, 400, and 401 combined: maximum transfer credit is one series; 2) No transfer credit for CHEM 305 if taken after CHEM 400
**General Education:** AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
**Catalog Date:** June 1, 2020
CHEM 306 Introduction to Organic and Biological Chemistry

Units: 5
Hours: 72 hours LEC; 54 hours LAB
Prerequisite: CHEM 305 with a grade of "C" or better
Transferable: CSU; UC (1) CHEM 305, 306, 400, and 401 combined: maximum transfer credit is one series
General Education: AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID CHEM 102
Catalog Date: June 1, 2020

The organic chemistry portion of this course emphasizes the major classes of organic compounds: their structure, physical and chemical properties related to biological systems, and nomenclature. Some clinical and pharmacological aspects are also discussed. The biochemistry portion of this course emphasizes the structure and function of carbohydrates, proteins, and lipids in biological systems. Special topics include enzymes and enzyme regulation, drugs their bioavailability and metabolism.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES OF ORGANIC MOLECULES.
- identify, name, draw and build structures of organic compounds including hydrocarbons, alcohols, organic acids, esters, amines, and amides
- defend predicted physical properties of hydrocarbons, alcohols, organic acids, esters, amines, and amides based on their chemical structure
- classify reactions involving hydrocarbons, alcohols, organic acids, esters, amines, and amides
- predict products from reactions involving hydrocarbons, alcohols, organic acids, esters, amines, and amides
- SLO #2: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL BIOCHEMICAL PRINCIPLES AND PROCESSES
  - distinguish important carbohydrates, amino acids, lipids and nucleic acids by name and structure.
  - compare the structure, function, and uses of important carbohydrates, lipids, proteins, and nucleic acids.
  - describe the process of digestion and metabolism of proteins, carbohydrates, and lipids.
  - describe the process by which energy is generated from carbohydrates, proteins, and lipids.
  - explain the role of enzymes in biochemical processes, and describe how they perform those roles
- SLO #3 – APPLY BASIC CONCEPTS OF MODERN ORGANIC CHEMISTRY TO EXPLAIN BIOCHEMICAL PROCESSES AND MECHANISMS.
  - apply concepts learned in the organic chemistry portion of the course to proteins, carbohydrates, lipids, and nucleic acids.
  - predict physical properties of biochemical molecules based on their functional groups and intermolecular attractions
  - explain the role of group functionality in enzyme function and regulation.
  - describe how functional groups and solubility affect drug bioavailability and metabolism
  - compare the physical and chemical properties of carbohydrates, lipids, proteins, enzymes, and nucleic acids
  - describe how functional groups and solubility affect drug bioavailability and metabolism
- SLO #4: WORK SAFELY IN A LABORATORY ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES.
  - conduct and follow the laboratory safety protocols and practice chemical safety based on MSDS.
  - demonstrate proper laboratory techniques
  - synthesize classes of organic compounds
  - determine physical and chemical properties of classes of organic compounds
  - determine physical and chemical properties of proteins and amino acids
- SLO #5: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY
  - process constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate.
  - recognize and acknowledge past and present contributors to the field of chemistry.
  - reference others on their original ideas with proper credit in student's submitted work.

CHEM 309 Integrated General, Organic, and Biological Chemistry

**Units:** 5
**Hours:** 72 hours LEC; 54 hours LAB
**Prerequisite:** MATH 100 or 102 with a grade of “C” or better, or placement through the assessment process.
**Advisory:** ENGWR 101, or placement through the assessment process; Successful completion of high school Chemistry
**Transferable:** CSU; UC
**General Education:** AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
**Catalog Date:** June 1, 2020

This course is an intensive survey of general, organic, and biological chemistry specifically designed for nursing majors and other health-related fields. Topics include general chemistry, organic chemistry, and biological chemistry. This course satisfies the requirements of those health-care programs that require one semester of chemistry. Students who had chemistry in high school and retained some of it are advised to take CHEM 309. Students who have not taken a chemistry course recently or have never taken a chemistry course are advised to take the CHEM 305 and CHEM 306 sequence.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES
• analyze the fundamental features of chemistry including measurement of physical properties such as mass, volume, density, pressure, temperature, and solutions

• differentiate between functional groups when they appear in biological molecules and relate their functional groups to the physical and chemical properties of the biological molecules

• differentiate between physical and chemical properties of matter

• name and write chemical formulae of cations, anions, inorganic compounds, and organic compounds

• analyze the phenomena of diffusion, osmosis, dialysis, and transport mechanisms of particles through cell membranes based on their physical properties

• differentiate typical acid and base formulae and compare the behaviors associated with acids and bases

• SLO #2: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT

• apply the concept of unit analysis towards concentration, dilution, and medical dosage calculation

• describe intermolecular forces and apply them to the understanding of basic principles of biochemistry and physical characteristics of organic compounds

• apply LeChatelier's equilibrium principles to the understanding of blood buffers

• distinguish among various functions of four major classes of biomolecules in living cells

• compare the processes of DNA replication, transcription, and translation

• compare major biochemical components in catabolic pathways for carbohydrates, triglycerides, and proteins and compare the output from those processes.

• SLO #3: COMMUNICATE EFFECTIVELY, BOTH ORALLY AND IN WRITING

• write a logical, complete setup for each chemical calculation, that details the method used demonstrate proper collection and recording of scientific measurements with the correct units (i.e. measuring mass, volume, temperature, length, and pressure)

• complete laboratory manual pages documenting work completed, evaluating data obtained, calculating further information based on that data, and deriving conclusions from that data

• demonstrate the recording and evaluation of observations (physical and chemical changes and properties)

• SLO #4: WORK SAFELY IN A LABORATORY ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES.

• observe basic chemistry laboratory safety practices based on MSDS

• demonstrate proper laboratory techniques: apply both chemical deduction and scientific method to the solving of problems in a laboratory environment including following written directions, measuring, synthesis, writing observations and appropriate measurement units to all chemical calculations based on laboratory-obtained data

• calculate non-measured information based on that data, such as the concentration of an unknown solution draw sound conclusions from collected data and observations analyze sources of experimental error

• analyze individual and group data as well as scientific literature to determine the validity, precision and accuracy of results obtained from experimental data

• SLO #5: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY.

• welcome constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate

• acknowledge past and present contributors to the field of chemistry and credit another's idea and data with appropriate reference

CHEM 321 Environmental Chemistry

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020
This course explores the interrelationship of human beings and the surrounding environment with regard to the chemical substances that are encountered in everyday life. The role of chemistry in both creating environmental problems as well as providing solutions to environmental problems will be examined. Students will learn how chemicals released to the environment can have adverse effects on ecosystems and human health. Chemical and physical methods of controlling and remediating air, water, and soil pollutants will be covered. The role of environmental regulations in preventing and mitigating environmental degradation will also be covered. By the completion of this course, students will have acquired skills and techniques that can be utilized to examine environmental problems and their proposed solutions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES
  - describe the structure of the atom and how electrons, protons, and neutrons relate to chemical binding and structure.
  - demonstrate the ability to recognize acids and bases and their properties.
  - evaluate environmental processes from the perspective of basic chemical principles of matter and energy.
  - analyze how chemical and physical properties affect pollutant behavior in the environment.

- SLO #2: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT.
  - write balanced chemical equations and perform stoichiometric calculations
  - identify the sources of air, water, and soil pollution.
  - apply basic chemical principles in the interpretation and analysis of a Material Safety Data Sheet, Department of Transportation Guidebooks, and basic toxicological reference materials.
  - design pollution control and remediation systems based on chemical and physical principles.
  - describe the function of environmental laws and regulations in protecting and cleaning up the environment.

- SLO #3: COMMUNICATE EFFECTIVELY, BOTH ORALLY AND IN WRITING
  - write a concise report on an effective solution to an air, water or soil pollution issue
  - prepare and present an oral presentation on a remediation process

- SLO #4: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY
  - process constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate.
  - acknowledge past and present contributors to the field of chemistry and credit other's idea and data with appropriate reference.

CHEM 322 Environmental Chemistry Laboratory

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Corequisite: CHEM 321
Transferable: CSU; UC
General Education: CSU Area B1; CSU Area B3; IGETC Area 5A
Catalog Date: June 1, 2020

This course provides "hands-on" opportunities for students to collect and analyze data about chemicals found in the environment. Students will learn how to collect and analyze soil, water and air samples for environmental quality parameters and the presence of pollutants. Analysis of samples will involve the use of readily available field test equipment. Field trips for sample collection will take place during laboratory periods or at arranged times. There may also be field trips to environmental analytical laboratories.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT.
  - design a process for sampling, analysis and data handling in a field research setting
prepare a sampling plan which will describe the number of samples needed, the types of analyses to be performed and the sampling equipment required.

SLO #2: WORK SAFELY IN A LABORATORY OR FIELD ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES.

demonstrate basic chemistry laboratory techniques and safety practices

collect and properly analyze soil, air, and water samples using field and laboratory test equipment.

analyze individual and group data as well as scientific literature to determine successfully the validity, precision and accuracy of results obtained from experimental data.

conduct and successfully conclude laboratory and field experiments after receiving both written and verbal instructions, in a safe manner within time lines established by the instructor.

SLO #3: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY

process constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate.

acknowledge past and present contributors to the field of chemistry and credit other's idea and data with appropriate reference.

CHEM 400 General Chemistry I

Units: 5
Hours: 54 hours LEC, 108 hours LAB
Prerequisite: CHEM 300 with a grade of "C" or better; OR one year high school chemistry lecture and laboratory AND MATH 120 or the equivalent. Grade of "C" or better required to meet prerequisite.
Transferable: CSU; UC (1) CHEM 305, 306, 400 and 401 combined: maximum transfer credit is one series
General Education: AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID CHEM 110; Part of C-ID CHEM 120S
Catalog Date: June 1, 2020

This is a general college chemistry course intended for students majoring in the scientific disciplines including chemistry, biology, physics, geology and engineering. This course emphasizes the fundamental principles of chemistry. Topics include chemical measurement, physical and chemical processes, nomenclature, atomic structure, quantum theory, stoichiometry, molecular structure, bonding theory, physical properties of gases, thermochemistry, modern materials, and properties of solutions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES

apply the basic terminology and nomenclature of inorganic chemistry.

explain macroscopic observations in terms of the basic properties and theories of matter.

define key principles of atomic theory, and distinguish the basic factors that produce atomic orbital structure.

predict solubility of ionic compounds, distinguish between soluble and insoluble compounds, and illustrate the effects of both solvent and solute properties on solubility.

predict the geometric shape and structure of basic inorganic and organic compounds.

explain and apply changes in the physical properties of solutions as a function of their colligative properties. This would include, for example, calculations of freezing point and boiling point changes, as well as changes in vapor pressure and osmotic pressure

SLO #2: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT.

analyze and then solve chemical calculation problems that involve solids, solutions, or gases, in a clear and logical fashion; for example, stoichiometry, acid-base, and colligative property problems.

analyze and then solve chemical calculation problems that involve heat energy transfers in calorimeters or chemical reactions; for example, determining the heat of fusion, heat of solution, heat of reaction, and heat capacity.

calculate, write and balance chemical and thermochemical equations, with respect to molar quantities and energy. Evaluate these balanced equations with respect to quantities of individual elements present.
• apply balanced equations and chemical principles such as limiting reagent and percent yield to predict expected outcomes of chemical reactions, including acid/base reactions, redox reactions, and gas phase reactions. Discuss actual versus expected yields, distinguishing potential sources of differences in percent yields.

• SLO #3: COMMUNICATE EFFECTIVELY, BOTH ORALLY AND IN WRITING

• demonstrate the proper collection and recording of scientific measurements in tables with the correct units and number of significant figures (i.e. measuring mass, volume, temperature, length, and pressure), and the recording and evaluation of observations (physical and chemical changes and properties).

• prepare a written lab notebook documenting work completed, evaluating data obtained, and analyzing conclusions derived from that data, by means of calculated results, data tables and both hand generated and computer generated graphs.

• SLO #4: WORK SAFELY IN A LABORATORY ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES.

• demonstrate basic chemistry laboratory techniques and safety practices

• synthesize data into computer generated graphical outputs, and make predictions by interpolation, using linear and non-linear regression analyses.

• evaluate errors related to experimental procedures, and assess their effects on experimental results.

• demonstrate understanding of the importance of significant figures, use of correct units of measurement, and proper application of basic calculations of stoichiometry and thermochemistry as they apply to laboratory experiments.

• successfully analyze individual and group data as well as scientific literature to determine the validity, precision and accuracy of results obtained from experimental data.

• successfully conclude laboratory experiments after receiving both written and verbal instructions, in a safe manner within time lines established by the instructor.

• design experimental procedures, execute the designed experiments, assess the data obtained, formulate hypotheses to categorize and correlate data obtained, and identify critical factors affecting results obtained from the experimental work.

• SLO #5: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY

• process constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate.

• recognize and acknowledge past and present contributors the field of chemistry and credit other's ideas and data with appropriate reference.

CHEM 401 General Chemistry II

| Units:     | 5 |
| Hours:     | 54 hours LEC; 108 hours LAB |
| Prerequisite: | CHEM 400 with a grade of "C" or better |
| Transferable: | CSU; UC (1) CHEM 305, 306, 400, and 401 combined: maximum transfer credit is one series | CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C |
| General Education: | Part of C-ID CHEM 120S |
| C-ID:     | Part of C-ID CHEM 120S |
| Catalog Date: | June 1, 2020 |

This course is a continuation of the two-semester series in general college chemistry. Topics presented in the course include kinetics, equilibrium, acid/base chemistry, thermodynamics, electrochemistry, radiochemistry, coordination chemistry, and an introduction to organic chemistry. Laboratory exercises include qualitative and quantitative analysis techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES.

• explain the basic concepts and theories of kinetics, equilibrium, thermodynamics, electrochemistry

• SLO #2: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT.

• solve quantitative problems in areas such as: kinetics, equilibrium, thermodynamics, acid/base chemistry, electrochemistry, coordination chemistry, and nuclear chemistry through the mathematical application of basic principles.

• evaluate and solve qualitative problems using the basic principles of kinetics, equilibrium, thermodynamics, electrochemistry, coordination chemistry, and nuclear chemistry.

• SLO #3: COMMUNICATE EFFECTIVELY, BOTH ORALLY AND IN WRITING
demonstrate the proper collection and recording of scientific measurements in tables with the correct units and number of significant figures (i.e. measuring mass, volume, temperature, length, and pressure), and the recording and evaluation of observations (physical and chemical changes and properties).

prepare a written lab notebook documenting work completed, evaluating data obtained, and analyzing conclusions derived from that data, by means of calculated results, data tables and both hand generated and computer generated graphs.

SLO #4: WORK SAFELY IN A LABORATORY ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES.

demonstrate basic chemistry laboratory techniques and safety practices

synthesize data into computer generated graphical outputs, and make predictions by interpolation, using linear and non-linear regression analyses.

evaluate errors related to experimental procedures, and assess their effects on experimental results.

demonstrate understanding of the importance of significant figures, use of correct units of measurement, and proper application of basic calculations of kinetics, equilibrium, thermochemistry, and electrochemistry as they apply to laboratory experiments.

justify the identity of unknown cations and anions using experimental evidence from qualitative analysis, the scientific method, and chemical reasoning.

analyze individual and group data as well as scientific literature successfully to determine the validity, precision and accuracy of results obtained from experimental data.

conduct and successfully conclude laboratory experiments after receiving both written and verbal instructions, in a safe manner within time lines established by the instructor.

design experimental procedures, execute the designed experiments, assess the data obtained, formulate hypotheses to categorize and correlate data obtained, and identify critical factors affecting results obtained from the experimental work.

SLO #5: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY

process constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate.

recognize and acknowledge past and present contributors the field of chemistry and credit other's ideas and data with appropriate reference.

CHEM 420 Organic Chemistry I

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: CHEM 401 with a grade of "C" or better
Transferable: CSU; UC
General Education: CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID CHEM 150; Part of C-ID CHEM 160
Catalog Date: June 1, 2020

This course surveys the principles of organic chemistry intended for chemistry and biological science majors or those students interested in the medical and related professions. Units covered include chemistry of alkanes/cycloalkanes, alkenes, alkyl halides, alcohols with emphasis on physical and chemical properties, nomenclature, stereochemistry, reaction mechanisms (SN1, SN2, E1, and E2) and spectroscopy (FT-IR and MS). Laboratory work includes characterization of organic molecules using analytical instrumentation such as FTIR, GC, and GC/MS. Modern separation and purification techniques are also introduced such as HPLC, Packed-column GC, and Capillary GC, as well as traditional techniques such as distillation, liquid-liquid extraction, recrystallization, column chromatography, and thin-layer chromatography.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES OF ORGANIC MOLECULES.

- name saturated and unsaturated hydrocarbons, alkyl halides and alcohols.

- analyze the relationship between the molecular structure of an organic molecule and its physical properties and chemical reactivity.

- classify 3-D structures of organic molecules in their chiralities, optical activity and correct isomeric classifications.
- explain the fundamental concepts of polar covalent bond, resonance structure, steric effect, electronegativity, and inductive effect.

- SLO #2 – APPLY BASIC CONCEPTS OF THE MODERN ORGANIC CHEMISTRY AND SPECTROSCOPY TO EXPLAIN ORGANIC REACTIONS AND MECHANISMS.

- analyze reaction mechanisms to predict products of organic chemistry reactions.

- propose reactions mechanisms for common organic chemistry reactions including SN1, SN2, E1, E2, and electrophilic addition reactions.

- propose a chemical structure based on given chemical and spectroscopic information: molecular formula, IR spectrum, and mass spectrum.

- provide reasons for favored products based on kinetic and thermodynamic preference.

- SLO #3: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT.

- design single and multi-step organic synthesis.

- analyze organic reactions via retro-synthesis.

- identify oxidative and reductive reactions.

- propose plausible reaction mechanisms with major and minor products for given reactants and reaction conditions.

- identify necessary reagents for regioselective synthesis.

- SLO #4: WORK SAFELY IN A LABORATORY ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES.

- conduct and follow the laboratory safety protocols and practice chemical safety based on MSDS.

- perform laboratory techniques such as liquid extraction and partition, synthesis, purification using both macro- and micro-scale procedures.

- prepare a structured laboratory notebook.

- perform basic spectral data collection (FT-IR and MS).

- perform basic sample analysis using Column Chromatography, TLC, GC, GC/MS and HPLC.

- analyze and interpret experimental data and apply statistics to express results.

- prepare and present formal oral report on an experiment.

- prepare written laboratory report and cite relevant literature reference.

- SLO #5: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY.

- process constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate.

- recognize and acknowledge past and present contributors to the field of chemistry.

- reference others on their original ideas with proper credit in student's submitted work.

---

**CHEM 421 Organic Chemistry II**

**Units:** 5

**Hours:** 54 hours LEC; 108 hours LAB

**Prerequisite:** CHEM 420 with a grade of "C" or better

**Transferable:** CSU; UC

**General Education:** CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C

**C-ID:** Part of C-ID CHEM 160S

**Catalog Date:** June 1, 2020

This course is a continuation of CHEM 420. Units covered include an in-depth study of the physical and chemical properties of aromatic compounds, aldehydes, ketones, amines, carboxylic acids and its derivatives. A special emphasis is placed on structural analysis/elucidation of these compounds by the various spectroscopic techniques. In addition, an introduction to pericyclic reactions and biomolecules is presented.
Upon completion of this course, the student will be able to:

- **SLO #1: CONCEPTUALIZE, MODEL, AND EXPLAIN FUNDAMENTAL CHEMICAL PRINCIPLES AND PROCESSES OF ORGANIC MOLECULES.**
  - recognize and identify nomenclatures of aromatics, aldehydes, ketones, amines, carboxylic acids and their derivatives.
  - analyze the relationship between the molecular structure of an organic molecule and its physical properties and chemical reactivity.
  - explain the fundamental concepts of conjugated alkenes, aromaticity, carbonyl groups involving nucleophilic addition and nucleophilic acyl substitution.

- **SLO #2: APPLY BASIC CONCEPTS OF THE MODERN ORGANIC CHEMISTRY AND SPECTROSCOPY TO EXPLAIN ORGANIC REACTIONS AND MECHANISMS.**
  - analyze reaction mechanisms to predict major products of organic chemistry reactions.
  - propose reactions mechanisms for common organic chemistry reactions including electrophilic aromatic substitution, nucleophilic addition to carbonyl groups, and nucleophilic acyl substitution.
  - propose a chemical structure based on given chemical and spectroscopic information: molecular formula, IR spectrum, mass spectrum, UV-Vis spectrum and 1H and 13C – NMR spectrum.
  - Describe reasons for favored products based on kinetic and thermodynamic preference.

- **SLO #3: SOLVE CHEMISTRY PROBLEMS AT AN APPROPRIATE LEVEL BY ANALYZING THE GIVEN DATA FOR ITS SIGNIFICANCE, BY FORMULATING A SOLUTION STRATEGY, AND BY EXPRESSING THE RESULTS IN PROPER FORMAT.**
  - design multi-step organic synthesis.
  - Analyze organic reactions via retro-synthesis.
  - Propose plausible reaction mechanisms with major and minor products for given reactants and reaction conditions.

- **SLO #4: WORK SAFELY IN A LABORATORY ENVIRONMENT, APPLY AND EVALUATE SCIENTIFIC METHODS FOR ASSEMBLING EXPERIMENTS, COLLECTING DATA, AND INTERPRETING EXPERIMENTAL OUTCOMES.**
  - demonstrate basic chemistry laboratory techniques and safety practices.
  - perform laboratory techniques such as liquid extraction and partition, synthesis, purification using both macro- and micro-scale procedures.
  - prepare a structured laboratory notebook.
  - perform basic spectral data collection (FT-IR and NMR).
  - perform basic sample analysis using Column Chromatography, TLC, GC, GC/MS and HPLC.
  - analyze and interpret experimental data and apply statistics to express results.
  - apply statistics to express experimental results.
  - prepare and present formal oral report on an experiment.
  - prepare written laboratory report and cite relevant literature reference.

- **SLO #5: APPLY PRINCIPLES OF SCIENTIFIC ETHICS AND ACADEMIC INTEGRITY.**
  - evaluate constructive criticism of submitted work and offer the same to other individuals in a manner that fosters mutual respect amid objective scientific debate.
  - acknowledge past and present contributors to the field of chemistry.
  - cite others on their original ideas with proper credit in student’s submitted work.

**CHEM 495 Independent Studies in Chemistry**

- **Units:** 1 - 3
- **Hours:** 54 - 162 hours LAB
- **Prerequisite:** None.
- **Transferable:** CSU
- **Catalog Date:** June 1, 2020
An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **SLO #1**: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- **SLO #2**: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- **SLO #3**: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- **SLO #4**: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

CHEM 498 Work Experience in Chemistry

**Units:** 1 - 4
**Hours:** 60 - 300 hours LAB
**Prerequisite:** None.
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Chemistry.
**Transferable:** CSU
**General Education:** AA/AS Area III(b)
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED TO ONE’S CAREER** (SLO 1)
- Understand the effects time, stress, and organizational management have on performance.
- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
- Examine the career/life planning process and relate its relevancy to the student.
- Demonstrate an understanding of basic communication tools and their appropriate use.
- Demonstrate an understanding of workplace etiquette.
• DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER (SLO 2)

• Link personal goals to long term achievement.
• Display an understanding of creating a professional first impression.
• Understand how networking is a powerful job search tool.
• Understand necessary elements of a résumé.
• Understand the importance of interview preparation.
• Identify how continual learning increases career success.

• DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)
Communication Studies  
Cosumnes River College

The role of communication in the workplace today has grown in importance, and workplace communication competencies are increasingly in demand. The number one skill identified by employers is the ability to communicate clearly in both oral and written form. The number two skill identified by employers as necessary is the ability to work effectively as a member of a team. A competitive workplace requires employees to exercise competence in interview skills, professional presentations, written communication, group problem solving, intercultural interactions, conflict management, and analytical reasoning. This transferable degree gives students a foundation that can be used in any career path, increasing one's preparation for employment and transferability to a university.

Associate Degrees for Transfer

A.A.-T. in Communication Studies

The AA for Transfer in Communication Studies prepares students for graduation from Cosumnes River College as well as transfer to a four-year university, including lower division preparation for the major. Courses required for the degree provide students with a practical as well as theoretical foundation in the discipline and offer a critical perspective on human communication in a variety of contexts. Students completing this program will explore the history and interdisciplinary nature of human communication, develop communication competency for a variety of contexts, compose and critically evaluate oral, written and visual messages for diverse audiences, construct and defend arguments in support of a thesis, as well as demonstrate individual responsibility and integrity in all communication interactions.

1 Any transfer level communication (COMM) course listed that is completed in this category cannot be used to satisfy another part of the degree requirements.

2 Any transfer level communication (COMM) course listed that is completed in this category cannot be used to satisfy another part of the degree requirements.

The Associate in Arts in Communication Studies for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- Design and relate messages clearly for effective and appropriate oral communication (PSLO-1).
- Apply effective listening skills to comprehend spoken messages, analyze information critically and consider multiple perspectives (PSLO-2).
- Compose ideas clearly in effective, appropriate and well-organized written messages (PSLO-3).
- Assess individual responsibility within one's ability to influence ethical, effective and appropriate communicate among diverse settings and people (PSLO-4).
- Define and identify various theoretical perspectives across the discipline of communication studies (PSLO-5).
Career Information

Transfer: Courses offered by the Communication Department meet a wide range of lower division transfer requirements for CSU and UC universities. The department offers many courses designed to prepare students for transfer to a variety of disciplines including Business, Communication Studies, Criminal Justice, Education, Liberal Arts, Pre-Law, Mass Media, Management, Psychology, Sociology, and Social Work. Upon completion of a baccalaureate degree after transfer, students will gain opportunities for employment and promotion in fields including Public Information; Human Resources Development; Corporate Training; Motivational Speaking; Political Speech Writing; Radio & Television; Advertising; Public Relations; College & University Instruction; Organizational Administration; Negotiation & Mediation Services; Writing for Publication; Personnel Management; Customer Service; Social Science Research; Corporate Imaging; Campaign Management; Marketing; Community Relations; and Grant Writing. NOTE TO TRANSFER STUDENTS: The Associate Degree for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as “double-counting”). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions; it is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

Associate Degrees

A.A. in Communication, Organizational Communication

The role of communication in the workplace today has grown in importance, and workplace communication competencies are increasingly in demand. The number one skill identified by employers is the ability to communicate clearly in both oral and written form. The number two skill identified by employers as necessary is the ability to work effectively as a member of a team. A competitive workplace requires employees to exercise competence in interview skills, professional presentations, written communication, group problem solving, intercultural interactions, conflict management, and analytical reasoning. This transferable degree gives students a foundation that can be used in any career path, increasing one's preparation for employment and transferability to a university.

HIGHLIGHTS

* Transfer requirements simultaneously met while pursuing degree
* Many of the courses required for this degree can also be used to fulfill transfer general education requirements for the CSU system.
* Our courses are interdisciplinary in nature. Communication Studies offers students an opportunity to explore coursework in oral communication, critical thinking, social sciences, multicultural studies, and living skills.
* Students will find this background helpful and applicable to their everyday pursuits. Students intending to transfer to a university will have a solid base of courses that will interface with further, focused study in a major. For those wishing to pursue a university degree in the field of communication, degrees can be earned with emphasis in the following areas:
  • Mass Media Studies
  • Broadcast Electronic Communication Arts
  • Organizational Communication
  • Intercultural Communication
  • Visual Communication
  • Rhetoric
  • Group Communication
  • Interpersonal Communication

FURTHER INFORMATION: For additional program information, contact any of our full time faculty:

Colette (Cole) Harris (916) 691-7202
Dan DuBray (916) 691-7493
Georgine Hodgkinson (916) 691-7772
Chris Wagner (916) 691-7336

NOTE TO TRANSFER STUDENTS: If you are interested in transferring to a four-year college or university to pursue a bachelor’s degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate’s degree in this major may be different from the requirements needed for the Bachelor’s degree.

Total Units: 30

1 Or 3 units earned through any department approved internship - internships may be arranged through the CRC Co-op Work Experience program, and credit may be received by enrolling in WEXP 498, Work Experience in (Subject).

The Communication, Organizational Communication Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- Design and relate messages clearly for effective and appropriate oral communication (SLO-1).
- Apply effective listening skills to comprehend spoken messages, analyze information critically and consider multiple perspectives (SLO-2).
- Compose ideas clearly in effective, appropriate and well-organized written messages (SLO-3).
- Analyze and formulate critical thinking within the evidence and reasoning of spoken and written messages (SLO-4).
- Assess individual responsibility within one's ability to influence ethical, effective and appropriate communication among diverse settings and people (SLO-5).
- Define and identify various theoretical perspectives across the discipline of communication studies (SLO-6).

**Certificate of Achievement**

Applied Communication Skills Certificate
This certificate program provides the communication skills necessary for entry-level positions in business, and helps improve managerial attributes with an emphasis on abilities to communicate effectively, efficiently and appropriately in organizational settings. Students with this certificate are prepared to design messages based on analysis of the intended audience and cultural context, apply effective listening skills, analyze persuasive messages, and demonstrate effective oral presentation skills. The certificate prepares students with the skills necessary to demonstrate proficiency in different communication settings by identifying and appraising factors that affect organizational communication structures in small group, interpersonal and intercultural settings.

1It is recommended that one of the courses completed should meet the general education requirement of oral communication, which is either Communication 301, or 331, or 361.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Design and relate messages clearly for effective and appropriate oral communication (SLO-1).
- Apply effective listening skills to comprehend spoken messages, analyze information critically and consider multiple perspectives (SLO-2).
- Compose ideas clearly in effective, appropriate and well-organized written messages (SLO-3).
- Assess individual responsibility within one's ability to influence ethical, effective and appropriate communicate among diverse settings and people (SLO-4).

Career Information

Public Information; Human Resources Development; Corporate Training; Motivational Speaking; Political Speech Writing; Radio & Television; Advertising; Public Relations; College & University Instruction; Organizational Administration; Negotiation & Mediation Services; Writing for Publication; Personnel Management; Customer Service; Social Science Research; Corporate Imaging; Campaign Management; Marketing; Community Relations; Grant Writing Some careers may require more than two years of study.

Communication (COMM)

COMM 301 Introduction to Public Speaking
This course prepares students to speak in a variety of rhetorical situations: as college students, as employees, as opinion leaders in the
community. The course is designed to assist students in developing effective delivery, ethical research methodology, analytical thinking
and listening skills, organization and outlining skills, and appropriate presentation skills. Emphasis is on researching, preparing,
organizing, and presenting a variety of speeches for different audiences. Video-recording equipment may be used as an aid to the
student’s self-analysis and improvement. Access to a computer with online capabilities may be required and computer access is
available on campus.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DESIGN AND RELATE MESSAGES CLEARLY FOR EFFECTIVE AND APPROPRIATE ORAL COMMUNICATION (SLO#1).**
- Analyze an audience using age, gender, cultural variations, and other appropriate measures.
- Design, deliver and differentiate a variety of speech types, including, at a minimum, the speech to inform, to entertain or relate
  (within a special occasion), and to persuade.
- Identify, evaluate and apply appropriate nonverbal techniques.
- Design presentational aids, audio and/or visual, appropriate to the audience, message and context.
- Recognize and respond to techniques for managing communication apprehension.
- **APPLY EFFECTIVE LISTENING SKILLS TO COMPREHEND SPOKEN MESSAGES, ANALYZE INFORMATION CRITICALLY AND
  CONSIDER MULTIPLE PERSPECTIVES (SLO#2).**
- Demonstrate critical listening skills.
- Recognize and model constructive feedback.
- **COMPOSE IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES (SLO#3).**
- Compose fully developed, structured, and unified oral presentations, including formal written outlines.
- Locate, interpret and evaluate various research materials to accurately document sources (in oral and written form) according
to a standard referencing style (MLA, APA, CBE, etc.).
- **ANALYZE AND FORMULATE CRITICAL THINKING WITHIN EVIDENCE AND REASONING OF SPOKEN AND WRITTEN MESSAGES
  (SLO#4).**
- Assess, evaluate, and apply a variety of rhetorical strategies that are effective and appropriate per the purpose, occasion and
  audience.
- Apply language techniques and strategies appropriate to the audience and occasion.
- Arrange, paraphrase and effectively integrate evidence and/or supportive material into a presentation.
- **ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE’S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE AND APPROPRIATE
  COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE (SLO #5).**
- Recognize and apply ethical standards to the research, design and delivery of a message for an audience and occasion.

COMM 311 Argumentation and Debate

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | ENGWR 300 with a grade of "C" or better |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area II(b); CSU Area A3; IGETC Area 1B |
| C-ID: | C-ID COMM 110 |
| Catalog Date: | June 1, 2020 |
This course introduces students to argumentation, critical evaluation of evidence, and reasoning in the context of debate. A series of writing assignments will focus on the skills of critical thinking, rhetoric, and the sophistication of argumentative skills. Intended as a practical course, the fundamentals of proposition analysis, case building and dissent are discussed and applied within written communication and oral presentation. Video-recording equipment may be used as an aid to the student’s self-analysis and improvement. Access to a computer with online capabilities may be required and computer access is available on campus.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **COMPOSE IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES** (SLO #1).
- Use advanced lower-division composition: essay structure, continuity, elements of style, grammar as a stylistic technique, clarity, coherence, concision, persuasive essay and sophisticated writing skills that consider the reader as audience.
- Distinguish and evaluate the viability of different types of arguments.
- Compose arguments cogently in a number of modes, including but not limited to making proposals (propositions), providing evaluation, and explanation of positions and the existence of causal, analogical, and/or correlation relationships.
- **ANALYZE AND FORMULATE CRITICAL THINKING WITHIN EVIDENCE AND REASONING OF SPOKEN AND WRITTEN MESSAGES** (SLO #2).
- Understand the nature of critical thinking and quality composition.
- Apply the theoretical foundations for argument analysis and construction of induction, deduction, analysis, synthesis, sound reasoning, and fallacy identification within the readings and writing of debate cases and argumentative communication messages.
- Differentiate the nature and function of argumentation in various communication contexts.
- Assess rhetorical style differences and choose appropriate strategies for the composition of delivery of oral versus written argument.
- Critique written and oral arguments using Aristotle’s classical structures of reasoning and contemporary elements of argument (such as Stephen Toulmin’s model).
- Analyze competing points of views of subjects and determine the stances of the authors on the subjects as well as to express individual stances logically and effectively on the subjects.
- **DESIGN AND RELATE MESSAGES CLEARLY FOR EFFECTIVE AND APPROPRIATE ORAL COMMUNICATION** (SLO #3).
- Argue for a position within the context and understanding of a specific debate format.
- Design and present an affirmative and negative debate case clearly and effectively.
- Use the library and online technologies to research debate topics and gather evidence to support negative and affirmative positions.
- **APPLY EFFECTIVE LISTENING SKILLS TO COMPREHEND SPOKEN MESSAGES, ANALYZE INFORMATION CRITICALLY AND CONSIDER MULTIPLE PERSPECTIVES** (SLO #4).
- Consider the audience to establish common ground in the construction of affirmative and negative arguments.
- Construct effective refutation to opposing viewpoints in a variety of debate formats.
- Assess rhetorical style differences and choose appropriate strategies for the composition and delivery of oral and written messages.
- **ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE’S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE AND APPROPRIATE COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE** (SLO #5).
- Appreciate the importance of ethics in controversy.
- Demonstrate ethical behavior in the research, construction and delivery of arguments.
- Employ, evaluate and interpret various research materials to accurately document sources (in oral and written form) according to a standard referencing style (MLA, APA, CBE, etc.).
- **DEFINE AND IDENTIFY VARIOUS THEORETICAL PERSPECTIVES ACROSS THE DISCIPLINE OF COMMUNICATION STUDIES** (SLO #6).
- Define and identify various theoretical models of argumentation.
- Identify messages within argumentation and rhetoric and their theoretical approaches as they exist in a variety of communication contexts (classical Aristotelian, canons of rhetoric per Roman Oration, one-sided versus two sided messages, etc.).
COMM 315 Persuasion

This introductory course will examine historical and contemporary approaches to persuasive messages throughout time. It will also focus on the presentation of persuasive appeals, and learning to construct, deliver, and critique persuasive messages. Students will construct and deliver ethical persuasive messages directed toward a specific audience in front of a live audience or other pedagogically appropriate medium. Students explore ethical considerations of persuasive communication, learn about types of reasoning, and identify fallacious arguments as well as unethical means of influence such as manipulation, coercion, and propaganda as they occur in persuasion. This course presents fundamental theoretical models of critical thinking and communication studies that apply to rhetoric, examining message production, analyzing messages, and exploring the fields of electronic, print and social media, advertising (product campaign), political campaign strategy, and ideological campaign techniques for mass communication. A series of writing assignments of advanced composition will focus on the skills of critical thinking, persuasion, and the sophistication of argumentative essay skills. Access to a computer with online capabilities may be required and computer access is available on campus. As HONOR 341 Persuasion within Social Issues has a similar basis as this course, this course is not open to a student that has received credit for HONOR 341.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **COMPOSE IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES (SLO #1).**
- Use advanced lower-division composition techniques that address essay structure, continuity, emphasis and subtlety, elements of style, grammar as stylistic technique, audience, and persuasive essay writing.
- Apply the advanced use of clarity (agent-action-goal) and coherence (concentration, focus, maintenance, clear orientation and subject control), concision and emphasis to develop writing skills appropriate for a sophisticated style of English.
- Compose arguments cogently in a number of modes, including but not limited to making proposals, providing evaluation, and explanation of positions and the existence of causal and/or correlation relationships.
- **ANALYZE AND FORMULATE CRITICAL THINKING WITHIN THE EVIDENCE AND REASONING OF SPOKEN AND WRITTEN MESSAGES (SLO #2).**
- Construct and deliver ethical persuasive messages directed toward a specific audience in front of a live audience or other pedagogically appropriate medium.
- Apply the theoretical foundations for argument analysis, persuasion and essay construction of induction, deduction, analysis, synthesis, and sound reasoning within the readings and writing of persuasive communication messages.
- Differentiate between ethical persuasion and unethical means of influence such as manipulation, coercion, and propaganda.
- **ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE'S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE AND APPROPRIATE COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE (SLO #3).**
- Employ critical thinking and writing skills in reflection about multi-cultural diversity issues, ethics, and politics in terms of the effectiveness and appropriateness of persuasive communication.
- **DEFINE AND IDENTIFY VARIOUS THEORETICAL PERSPECTIVES ACROSS THE DISCIPLINE OF COMMUNICATION STUDIES (SLO #4).**
- Analyze persuasive messages, including identifying and explaining the persuasive components or strategies used to effect change.
- Identify persuasive strategies and their theoretical foundations as they exist in a variety of communication contexts (e.g., interpersonal compliance-gaining, commercial advertising, political rhetoric and campaigning, public speaking, mass media, etc.).
- Explain and apply the basic concepts of the field of communication demonstrating an understanding of theories of persuasive communication.
- Determine and evaluate criteria for the development of successful persuasive campaigns.

COMM 321 Interpersonal Communication
This course will explore and apply models and theories of interpersonal communication in a variety of personal and professional contexts. Using simulations and structured exercises, students will develop a deeper understanding of communication concepts associated with developing and maintaining satisfying interpersonal relationships. Additionally, students will focus on communication competency through a heightened awareness of the complexity of interpersonal communication during verbal and nonverbal transactions and the development of skills as both senders and receivers of shared messages. Video equipment may be used as an aid to the student's self-analysis and improvement. Access to a computer with online capabilities may be required and computer access is available on campus.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEFINE AND IDENTIFY VARIOUS THEORETICAL PERSPECTIVES ACROSS THE DISCIPLINE OF INTERPERSONAL COMMUNICATION (SLO #1).
- Evaluate various models of communication and explain how messages may be sent and received at both conscious and unconscious levels.
- Explain salient characteristics of interpersonal and intrapersonal communication in relation to other communication contexts.
- Identify stages of development and termination for interpersonal relationships.
- Describe the characteristics, behaviors and attitudes of competent communicators and explain how competent communicators appropriately adapt messages to varied contexts.
- ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE'S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE AND APPROPRIATE COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE (SLO #2).
- Describe the importance that self-awareness and personal identities play in the development of satisfying interpersonal relationships and identify guidelines for strengthening one's self-concept.
- Explain the importance of emotional intelligence for satisfying interpersonal relationships.
- Demonstrate ethical communication within the context of interpersonal relationships.
- Define the characteristics of interpersonal conflict and identify strategies for effective communication during conflict.
- APPLY EFFECTIVE LISTENING SKILLS TO COMPREHEND SPOKEN MESSAGES, ANALYZE INFORMATION AND CONSIDER MULTIPLE PERSPECTIVES (SLO #3).
- Analyze the process of human perception and describe the influence of various standpoints, such as culture and gender, on perception.
- Demonstrate active listening through the use of mindfulness, paraphrasing, and non-defensive responses to criticism.
- Delineate the difference between relational and literal meanings of interpersonal messages.

COMM 325 Intercultural Communication

This course introduces students to the influence of culture on identity, perception, social organization, language and nonverbal messages in intercultural experiences in the United States. Variations and commonalities in communication patterns across cultures are examined as well as processes and outcomes among persons of different group-based experiential backgrounds. Practical application of factors which influence communication among individuals of different cultures is emphasized. Access to a computer with online capabilities may be required and computer access is available on campus.
Upon completion of this course, the student will be able to:

- SLO 1: DEFINE, IDENTIFY, EXPLAIN AND APPLY VARIOUS THEORETICAL PERSPECTIVES ASSOCIATED WITH THE STUDY OF INTERCULTURAL COMMUNICATION.
  - Identify and describe cultural taxonomies that explain cultural variation (Ex. Hall, Hofstede, Kluckhohn & Strodtbeck, etc.).
  - Differentiate the communication behaviors associated with high and low context cultures.
  - Define the importance of nonverbal communication in the overall communication process.
  - Analyze, interpret and critique the nonverbal messages in intercultural encounters and recommend possible approaches for clarifying misunderstandings that might be present.
  - Explain different theoretical perspectives on language and its relation to reality (Ex. Sapir Whorf hypothesis, Hiyakawa's abstraction ladder, Chomsky and “deep structures,” etc.) and explain difficulties associated with the lack of equivalence in languages.

- SLO 2: ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE'S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE, AND APPROPRIATE COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE.
  - Profile recent demographic trends in the United States and its impact upon cultural institutions.
  - Research and discuss the historical context for racism and prejudice in the United States.
  - Recognize and explain why statements in the analysis of a communication event may have a marginalizing effect.
  - Compare and contrast the advantages and disadvantages of living in a diverse society.

- SLO 3: IDENTIFY AND DEMONSTRATE COMMUNICATION SKILLS ASSOCIATED WITH INTERCULTURAL COMPETENCE.
  - Explain how to determine the extent to which a communication event may be considered intercultural.
  - Analyze and interpret a critical incident identifying areas of misunderstanding.
  - Analyze an intercultural situation and apply learned content regarding appropriate strategies related to interaction management and conflict management.
  - Define “culture shock” and describe strategies for reducing discomfort in culturally unfamiliar and/or ambiguous situations.

- SLO 4: EXPRESS IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES.
  - Construct short answer essays that synthesize material from separate topic areas of the course.
  - Summarize ethnographic and/or database research that explore(s) a culture in the United States different from one’s own perspective.

### COMM 331 Group Discussion

This course is designed to increase students' understanding of group communication and to prepare students to function more effectively in various types of groups, as college students, employees, as members in the community. The course is designed to assist students in developing an understanding of how group communication is uniquely different from other communication. Oral communication techniques within group settings will be analyzed in depth and assignments will include informative and persuasive oral presentations (individual and group). The course will enhance students' effectiveness in the small group dynamics of roles, functions, leadership and norms. Problem-solving and decision-making skills are emphasized through simulations and discussion. Group projects may require students to meet outside of class time for service learning or campus activities. Video-recording equipment may be used as an aid to the student's self-analysis and improvement. Access to a computer with online capabilities may be required and computer access is available on campus.

### Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **DESIGN AND RELATE MESSAGES CLEARLY FOR EFFECTIVE AND APPROPRIATE ORAL COMMUNICATION (SLO #1).**

  - Analyze an audience using age, gender, cultural variation and other appropriate measures.
  - Design, deliver and differentiate a variety of speech types, including, at minimum, the speech to inform and one individual presentation within a group format (such as panel discussion, parliamentary procedure, or symposium, etc.).
  - Manage information while using a variety of formats and designs for facilitating group communication and delivering oral presentations.
  - Apply and evaluate appropriate verbal and nonverbal communication strategies for oral presentations.
  - Design presentational aids, audio and/or visual, appropriate to the audience, message and context.
  - Recognize and respond to techniques for managing communication apprehension.

- **APPLY EFFECTIVE LISTENING SKILLS TO COMPREHEND SPOKEN MESSAGES, ANALYZE INFORMATION CRITICALLY AND CONSIDER MULTIPLE PERSPECTIVES (SLO #2).**

  - Demonstrate critical listening skills.
  - Recognize and model constructive feedback.

- **COMPOSE IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES (SLO #3).**

  - Compose fully developed, structured and unified oral presentations, including formal written structure.
  - Locate, interpret and evaluate various research materials to accurately document sources (in oral and written form) according to a standard referencing style (such as MLA, APA, CBE, etc.).
  - Arrange and present views within a presentation with persuasive force.

- **ANALYZE AND FORMULATE CRITICAL THINKING WITHIN EVIDENCE AND REASONING OF SPOKEN AND WRITTEN MESSAGES (SLO #4).**

  - Assess, evaluate, and apply a variety of rhetorical strategies that are effective and appropriate per the purpose, occasion and audience.
  - Arrange, paraphrase and effectively integrate evidence and/or supportive material into a presentation.
  - Apply critical thinking skills in decision making and problem-solving through systematic procedures or techniques for group discussion.
  - Evaluate communication effectiveness by considering group dynamics, group experience, roles, norms, leadership and other factors to recognize specific strategies for refining group discussion and oral presentations.
  - **ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE'S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE AND APPROPRIATE COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE (SLO #5).**

  - Recognize and apply ethical standards to the research, design and delivery of a message for an audience and occasion.
  - Recognize and integrate effective group leadership and conflict management skills.

- **DEFINE AND IDENTIFY VARIOUS THEORETICAL PERSPECTIVES ACROSS THE DISCIPLINE OF GROUP COMMUNICATION STUDIES (SLO #6).**

  - Examine and apply theoretical frameworks within group communication.
  - Identify and differentiate different types of groups.
  - Analyze communication behaviors within group interactions.

**COMM 341 Organizational Communication**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** ENGWR 101 with a grade of "C" or better  
**Transferable:** CSU  
**General Education:** AA/AS Area V(b); CSU Area D7  
**Catalog Date:** June 1, 2020
This course is designed to allow students to examine both theoretical and pragmatic essentials of effective organizational messages from preparation and presentation to efficacious observation and analysis. Students will explore the dynamics of organizational communications in basic communication skills, working relationships, leadership, diversity in the workplace, conflict negotiation teams and problem solving and/or decision making groups. The roles of internal and external messages on the communication process and organizational effectiveness will be examined and analyzed. Access to a computer with on-line capabilities may be required and computer access is available on campus.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEFINE AND IDENTIFY VARIOUS THEORETICAL PERSPECTIVES WITHIN THE DISCIPLINE OF ORGANIZATIONAL COMMUNICATION STUDIES (SLO #1).
- Identify and analyze types of communication networks.
- Apply and analyze organizational communication theory to a variety of organizational settings.
- Identify and examine external influences on organizational culture in terms of ethical, behavioral, managerial, and technological approaches.
- Compare and critique the various theoretical perspectives of leadership.
- Examine the effects of globalization, cultural diversity, and outsourcing on organizations within current industries, based upon theoretical principles of communication.
- ANALYZE AND FORMULATE CRITICAL THINKING WITHIN EVIDENCE AND REASONING OF SPOKEN AND WRITTEN MESSAGES (SLO #2).
- Analyze issues and alternatives to implement conflict management strategies in a variety of organizational situations.
- Recognize and employ team strategies for problem-solving and decision-making.
- COMPOSE IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES (SLO #3).
- Design and compose an effective written message to report observations and analysis of communication strategies and components utilized within a working organization.
- ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE'S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE, AND APPROPRIATE COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE (SLO #4).
- Describe and illustrate communication strategies within working relationships among diverse settings and people in contemporary organizations.
- Identify types of power and analyze relationships between power, conflict and leadership.

COMM 361 The Communication Experience

This course introduces students to the fundamental concepts necessary for effective communication in a variety of settings with a variety of audiences. Special emphasis is placed on practical experiences within groups, facilitation of interpersonal relationships, and methods of conflict management. As part of this course, students are required to actively participate in groups and deliver oral presentations, both individually and in groups. Video-recording equipment may be used as an aid to the student's self-analysis and improvement. Access to a computer with online capabilities may be required and computer access is available on campus.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EXPRESS AND CONVEY MESSAGES CLEARLY FOR EFFECTIVE AND APPROPRIATE ORAL COMMUNICATION (SLO #1).
- Apply and demonstrate verbal and nonverbal communication strategies for oral presentations within a variety of contexts and audiences.
- Recognize and respond to techniques for managing communication apprehension.
COMM 363 Introduction to Communication Theory

| Units:     | 3 |
| Hours:     | 54 hours LEC |
| Prerequisite: | None. |
| Advisory:  | Eligibility for ENGWR 300. |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area II(b); CSU Area D7 |
| C-ID:      | C-ID COMM 180 |
| Catalog Date: | June 1, 2020 |

This course will introduce the student to the symbolic process of human communication through the study of basic communication models, fundamental theory, and relevant research findings. Emphasis will be placed on achieving an understanding of the communication process, and the process through which researchers in the field add to their existing body of knowledge. Access to a computer with online capabilities may be required and computer access is available on campus.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEFINE, IDENTIFY, EXPLAIN AND APPLY VARIOUS THEORETICAL PERSPECTIVES ASSOCIATED WITH THE STUDY OF HUMAN COMMUNICATION (SLO #1).
- Identify and describe the major areas of study across the discipline of communication and the contributions of major scholars/researchers in terms of theoretical foundations to these areas.
- Analyze human communication as a process according to theories that vary from one communication context to another.
- Recognize the symbolic nature of communication and explain how form and function in symbols between a sender and receiver(s) impact the message content, context, and the channel through which the message is delivered.
- EXPRESS IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES (SLO #2).
Use clear and concise English in terms of spelling, grammar, paragraph structure, and continuity within essay writing.

Analyze competing points of view of subjects and determine the stances of the authors on the subjects as well to express individual stances logically and effectively on the subjects.

COMM 480 Honors Seminar: Political Campaign Communication

What do pundits, politicians and the public have in common? The ability to impact political campaign communication. This seminar-style course will introduce students to the effects of political campaign communication on public opinion and election results. Using timely data, students will evaluate news media, debate presidential debates, and analyze campaign messages using qualitative and quantitative approaches. This course is intended for the honors student interested in learning about political communication, rhetorical criticism, and techniques for writing for academic audiences. Enrollment is limited to Honors Program students. Details about the Honors Program can be found in the front of the Catalog and on the CRC website. This course is the same as HONOR 340, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EXPRESS IDEAS CLEARLY IN WELL-ORGANIZED WRITTEN MESSAGES (SLO #1).
- Express ideas clearly and completely in a variety of written formats.
- Utilize correct and appropriate conventions of mechanics, usage, and style in written communication.
- Comprehend main ideas and reasonably interpret written information.
- Compose and apply properly documented sources of information.
- UTILIZE MODES OF ANALYSIS AND CRITICAL THINKING IN A DISCIPLINE OF STUDY AS APPLIED TO SIGNIFICANT ISSUES AND/OR PROBLEMS (SLO #2).
- Contrast historical campaign communication with contemporary examples.
- Distinguish between quantitative and qualitative theoretical approaches in research of political communication.
- Analyze the critical process by differentiating between “maxims” that guide critical invention.
- Compare and contrast different rhetorical approaches. Analyze contemporary pieces of rhetorical criticism and consider applications for current political messages.
- Analyze reasoning processes to evaluate issues, value judgments or conclusions that determine the quality, validity, and/or reliability of information.
- Construct an accurate and/or logical interpretation of reasoning while applying a framework of analytic concepts.
- Explain the importance of the study of political campaign communication in the broader picture of society.
- ACTIVELY ENGAGE IN INTELLECTUAL INQUIRY BEYOND THAT REQUIRED IN ORDER TO PASS A COURSE OF STUDY (SLO #3).
- Apply information and resources necessary to develop academically and personally.
- Utilize skills from one’s “academic tool kit” including time management, study skills, etc.
- RECOGNIZE THE ETHICAL DIMENSIONS OF DECISIONS AND ACTIONS (SLO #4).
- Demonstrate the ability to engage in ethical reasoning necessary to exercise responsibility as an ethical individual, professional, local and global citizen.
- ARTICULATE AN AWARENESS OF A VARIETY OF PERSPECTIVES WITHIN A DISCIPLINE AND THE RELEVANCE OF THESE PERSPECTIVES TO ONE’S OWN LIFE (SLO #5).
COMM 482 Honors Seminar: Persuasion within Social Issues

- Collect and critically evaluate media messages. Focusing on news mediums (e.g., television, radio, newspapers, the Internet), assess the role of the media and its impact on campaign communication.
- Contrast and assess the effectiveness of candidate messages. Construct rhetorical visions expressed in the campaign communication of presidential (and possibly other) candidates.
- Debate the presidential debates. Analyze the presidential candidates’ positions on political issues and performance effectiveness.
- Assess voter reaction to the political debates and other forms of campaign communication. Select common themes communicated in focus groups research as a way to interpret public opinion.
- Design and construct a critical paper evaluating some aspect of political campaign communication.
- Consider the implications of writing for an academic audience.

This seminar-style course will introduce students to the fundamental theories and techniques of persuasion as they occur in various communication contexts, including commercial, interpersonal, public and mass media. A series of writing assignments will focus on the skills of critical thinking, persuasion, and the sophistication of argumentative essay skills. Essays of advanced composition shall be evaluated for their quality in both critical thinking and composition. The writing assignments will apply theoretical models of critical thinking and communication studies to rhetoric, examining message production, analyzing messages, and exploring the fields of electronic and print media, advertising (product campaign), political campaign strategy, and ideological campaign techniques for mass communication. Students explore ethical considerations of persuasive communication, learn about types of reasoning, and identify fallacious arguments as they occur in persuasion. Students will focus on the design and organization of persuasive messages within a speech format for an individual or group presentations for a live audience. This course offers honors students the opportunity to study, critique, discuss and present advanced topics to focus on the impact of persuasive attempts within ethical, social and political issues. Access to a computer with online capabilities may be required and computer access is available on campus. Enrollment is limited to Honors Program students. Details about the Honors Program can be found in the front of the Catalog and on the CRC website. As COMM 315, Persuasion, has a similar basis as this Honors course, this course is not open to a student that has received credit for COMM 315, Persuasion. This course is the same as HONOR 341, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- COMPOSE IDEAS CLEARLY IN EFFECTIVE, APPROPRIATE AND WELL-ORGANIZED WRITTEN MESSAGES (SLO #1).
- Use advanced lower-division composition techniques that address essay structure, continuity, emphasis and subtlety, elements of style, grammar as stylistic technique, audience, and persuasive essay writing.
- Apply the advanced use of clarity (agent-action-goal) and coherence (concentration, focus, maintenance, clear orientation and subject control), concision and emphasis to develop writing skills appropriate for a sophisticated style of English.
- Compose arguments cogently in a number of modes, including but not limited to making proposals, providing evaluation, and explanation of positions and the existence of causal and/or correlation relationships.
- Design and organize persuasive messages within a speech format for an individual or group presentations for a live audience.
- ANALYZE AND FORMULATE CRITICAL THINKING WITHIN THE EVIDENCE AND REASONING OF SPOKEN AND WRITTEN MESSAGES (SLO #2).
- Identify, review, and utilize methods of persuasion for messages designed within a specific content issue or arena, such as a series of public service announcements for a social issue (such as anti-drug messages, or environmental green issues, or human civil rights, etc.), and/or political campaign or public office speeches, and other website or multimedia presentations.
- Understand the nature of critical thinking and quality composition.
- Apply the theoretical foundations for argument analysis, persuasion and essay construction of induction, deduction, analysis, synthesis, sound reasoning, and fallacy identification within the readings and writing of persuasive communication messages.
• Analyze and respond to competing points of views to determine the stances of the authors on the subjects as well to express individual stances logically and effectively.

• ASSESS INDIVIDUAL RESPONSIBILITY WITHIN ONE’S ABILITY TO INFLUENCE ETHICAL, EFFECTIVE AND APPROPRIATE COMMUNICATION AMONG DIVERSE SETTINGS AND PEOPLE (SLO #3).

• Employ critical thinking and writing skills in reflection about multi-cultural diversity issues, ethics, and politics in terms of the effectiveness and appropriateness of persuasive communication.

• DEFINE AND IDENTIFY VARIOUS THEORETICAL PERSPECTIVES ACROSS THE DISCIPLINE OF COMMUNICATION STUDIES (SLO #4).

• Analyze persuasive messages, including identifying and explaining the persuasive components or strategies used to effect change.

• Identify persuasive strategies and their theoretical foundations as they exist in a variety of communication contexts (e.g., interpersonal compliance-gaining, commercial advertising, political rhetoric and campaigning, public speaking, mass media, etc).

• Differentiate between humanistic and social science approaches to persuasion.

• Determine and evaluate criteria for the development of successful persuasive campaigns, focusing on a specific set of message designs in a specified content, such as a series of public service announcements in multimedia presentation, website information, published and/or transcribed speeches, and/or publication of printed materials.

• Define and identify various theoretical perspectives across the discipline of Communication Studies within written and verbal messages prepared to present analysis of persuasive techniques and strategies to the other students participating in an Honors seminar-style format.

COMM 494 Topics in Communication

| Units: | 0.5 - 4 |
| Hours: | 9 - 72 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is designed to allow a student to focus on a set of contemporary communication concepts or theoretical frameworks in communication studies. Possible options for topics may include, but are not limited to: extemporaneous speaking, intercultural communication in the workplace or diverse settings, stages within interpersonal relationships, communication in the classroom, conflict, principles of visual communication, nonverbal communication, readers' theater, rhetorical criticism, parliamentary procedure and decision making techniques. Consult class schedule for specific topics offered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Actively engage in intellectual inquiry beyond that required in order to pass a course of study (SLO #1; College Wide Learning Outcome – Area 4).

• Discuss and apply a study plan (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline of Communication Studies.

• Use information resources to gather discipline-specific information.

• Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in communication studies to issues and/or educational activities pertaining to a specific topic (SLO #2; PSLO #4; and College Wide Learning Outcome – Area 3).

• Analyze and apply the knowledge, skills and experience that are involved in the study of a topic of communication studies to theoretical perspectives and/or concepts in the major discipline of study.

• Express ideas clearly in effective, appropriate and well-organized written messages (SLO #3; PSLO #3).

• Construct short answer essays and/or written analysis that synthesize material from separate topic areas of the course.

• Compose short answer essays and/or written reporting with correct grammar, sentence structure, and continuity.

COMM 495 Independent Studies in Communication
An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills, and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- **SLO #4:** Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

**COMM 498 Work Experience in Communication and Media Studies**

| Units: | 1 - 4 |
| Hours: | 60 - 300 hours LAB |
| Prerequisites: | None. |
| Enrollment Limitation: | Students must be in a paid or unpaid internship, volunteer position or job related to career goals. |
| Transferable: | CSU |
| General Education: | AA/AS Area III(b) |
| Catalog Date: | June 1, 2020 |

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student’s progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER (SLO 1)**
- Understand the effects time, stress, and organizational management have on performance.
- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
- Demonstrate an understanding of basic communication tools and their appropriate use.
- Demonstrate an understanding of workplace etiquette.
- DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER.(SLO 2)
- Link personal goals to long term achievement.
- Display an understanding of creating a professional first impression.
- Understand how networking is a powerful job search tool.
- Understand necessary elements of a résumé.
- Understand the importance of interview preparation.
- Identify how continual learning increases career success.
- DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.(SLO 3)
Computer Information Science | Cosumnes River College

CRC computer information science programs include study in computer programming, information systems security, computer networking, management information systems, and computer applications. A wide range of degree and certificate programs are available to meet the needs of transfer students who plan to complete a four-year degree as well as career/technical students who plan to enter the workforce.

 Willial3@crc.losrios.edu (mailto:Willial3@crc.losrios.edu)

Associate Degrees

A.S. in CIS - Computer Science

This program provides a foundation in algorithm development, programming techniques, data structures, and structured problem solving.

This A.S. Degree would be appropriate for a student planning to transfer to the California State University (CSU) or the University of California (UC) to major in either Computer Science or Computer Engineering.

It is critical that transfer students regularly meet with a CRC counselor and the CRC programming faculty to select specific CRC courses that match university degree requirements.

Catalog Date: June 1, 2020

The corequisite for this course can be applied to the CRC graduation requirements.

The CIS - Computer Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Redefine a complex problem into a sequential set of parts that can be translated into the language of programming logic.
- Design, write, test, and debug computer programs in a structured language, a low-level language, and an object-oriented language.
- Incorporate foundational data management concepts such as data structures within computer programs.

A.S. in CIS - Information Systems Security

This degree is designed to give students currently employed as an Information Technology (IT) Professional the additional skill sets necessary to work in this rapidly growing field.

HIGHLIGHTS:

* Hands-on experience in a state-of-the-art computer center
* Opportunities to work on specialized projects relating to computer information science, business and computer programming.
* Study in a field that has great employment opportunities and encompasses many careers.

NOTE TO TRANSFER STUDENTS: If you are interested in transferring to a four-year college or university to pursue a Bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

The CIS - Information Systems Security Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:
SLO #01: Evaluate the different types of access control methods used to secure a network, in particular authentication, authorization and audit.

SLO #02: Construct a Business Continuity and a Disaster Recovery Plan. These plans are used by an organization to resume partially or completely interrupted critical function(s) within a predetermined time after a disaster or temporary disruption.

SLO #03: Analyze the different types of cryptography used in computer and network security in such area as access control and information confidentiality.

SLO #04: Recognize some of the methods used to properly conduct a computer forensics investigation. This discussion should begin with a discussion on ethics.

SLO #05: Evaluate a firewall to prevent unauthorized access to a network or computer. Students will also learn how to allow access to key services while maintaining an organization's security.

SLO #06: Evaluate, implement and manage secure remote-access technologies, such as Internet Detection Systems (IDS), which are powerful tools used for identifying and responding to network- and host-based intrusions.

SLO #07: Distinguish the different ways to secure an operating system. Students will know how to maintain the integrity, authenticity, availability, and privacy of data.

SLO #08: Analyze risks to a network and be able to implement a workable security policy that protects information assets from potential intrusion, damage or theft.

Career Information

Computer Operator; Information Systems Security Specialist; Computer Systems Specialist; Computer Technician

A.S. in CIS - Information Technology

This degree allows students to acquire basic core Information Technology competencies that will prepare them for a career in Computer Networking, Cybersecurity, and related fields.

The CIS - Information Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Apply fundamental knowledge of computing and the current use of technology techniques, skills, and tools necessary for the computing practice.
- Evaluate and solve business problems with technology solutions using qualitative and quantitative information.
- Assess user needs in the selection, creation, evaluation and administration of computer-based information systems.
- Demonstrate appreciation of the Information Technology career field and the need to be lifelong learners.

Career Information

The Associate's degree in Information Technology prepares students to either enter the workforce as an entry-level computer or network support technician or pursue a bachelor's degree in managing information systems. Several CSUs currently offer baccalaureate IT or CT programs, as do several private universities. More CSUs are already working on build upper division programs based on the recently approved IT Model Curriculum.

A.S. in CIS - Server Administrator

CRC computer information science programs include study in computer programming, information systems security, computer networking, management information systems, and computer applications. A wide range of degree and certificate programs are available to meet the needs of transfer students who plan to complete a four-year degree as well as career/technical students who plan to enter the work force. Several of the programs are designed to promote a career ladder from certificate to associate degree to university transfer. Other programs are designed to upgrade the skill set of working IT professionals. All program options are designed with advice from business and industry representatives and conform to industry standards. For more information, refer to specific information about each program in the pages that follow. Transfer students should see a counselor to develop an educational plan based upon the specific requirements of the transfer institution.

This degree is designed for networking professionals who want to manage the components of a network system, based on the Microsoft Windows platform and Microsoft server software, on an ongoing basis; monitor and optimize the components of a network system; and diagnose and resolve problems regarding the components of a network system.

HIGHLIGHTS:
* Hands-on experience in a state-of-the-art computer lab.
* Opportunities to work on specialized projects relating to computer information science, business and computer programming.
* Study in a field that has great employment opportunities and encompasses many careers.

GUIDELINES TO STUDENTS:
* Microsoft Certified Solutions Associate (MCSA) certification requires three Microsoft exams (70-410, 70-411 and 70-412), which are covered in this degree.
* It is recommended that students use their best judgment and talk to a counselor or a CIS instructor to help guide them with their selection of the appropriate courses for their personal and/or professional needs.

NOTES TO TRANSFER STUDENTS:
* If you are interested in transferring to a four-year college or university to pursue a bachelor’s degree in this or a related major, it is critical you meet with a CRC counselor to select the appropriate transfer courses for your particular major.
* Schools vary widely in terms of their graduation requirements.

^1 Students interested in Windows should take CISN 301, CISN 374, CISN 378 and CISS 341. Students interested in Linux should take CISN 303 and CISS 342. Students interested in security should take CISS 341 or 342, CISS 350 and CISS 360.

The CIS - Server Administrator Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO #01: Manage, implement, and maintain the typically complex computing environment of medium- to large-sized companies
- PSLO #02: Manage and maintain a Windows server environment
- PSLO #03: Manage, implement, and maintain a Windows server network infrastructure
- PSLO #04: Develop the critical verbal, written, and quantitative skills needed to analyze complex issues
- PSLO #05: Develop an understanding of the basic concepts and major modes of inquiry used in a variety of disciplines
- PSLO #06: Develop a depth of understanding, including critical cognitive, psychomotor and affective skills, in this discipline
- PSLO #07: Make progress toward becoming engaged and self-reliant learners demonstrating habits of intellectual inquiry and striving toward their maximum potential
- PSLO #08: Become more prepared to contribute to a diverse democratic society with a pluralistic perspective

Career Information

A.S. in Management Information Systems
CRC's programs in CIS include study in computer programming, information systems security, computer networking, management information systems, and computer applications. A wide range of degree and certificate programs is available to meet the needs of transfer students who plan to complete a four-year degree as well as career/technical students who plan to enter the workforce. Several of the programs are designed to promote a career ladder from certificate to associate degree to university transfer. Other programs are designed to upgrade the skill set of working IT professionals. All program options are designed with advice from business and industry representatives and conform to industry standards. For more information, refer to specific information about each program in the pages that follow. Transfer students should see a counselor to develop an educational plan based upon the specific requirements of the transfer institution.

This program provides the basic skills necessary for a career in business, while allowing the student to select courses that fit individual needs and desires. This degree also meets some of CSU Sacramento's lower-division coursework for a BS in Business Administration with a Management Information Systems concentration.

**Highlights:**
* Hands-on experience in a state-of-the-art computer center
* Opportunities to work on specialized projects relating to computer information science, business and computer programming
* Study in a field that has great employment opportunities and encompasses many careers

**Note to Transfer Students:**
If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

1MATH 341 is recommended, but the other courses listed in this group will also meet the second MATH course requirement for Business Administration majors (all Concentrations, including Management Information Systems) transferring to CSU Sacramento.

The Management Information Systems Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- Apply information and communication technology concepts to business problems (SLO #01).
- Demonstrate in-depth knowledge of common office computerized application software and operating systems (SLO #02).
- Create business documents such as letters, spreadsheets, presentations, publications and reports using appropriate business writing style, document appearance, grammar usage, and writing mechanics (SLO #03).
- Analyze the fundamentals of an operating system. Examine the relationship of the operating system to other applications programs (SLO #04).
- Analyze the effects of malware on an application and an operating system (SLO #05).
- Apply accounting concepts and principles in making decisions about business operations (SLO #06).
- Apply accounting concepts for costs used in manufacturing and service operations and analyze the behavior of the cost types (SLO #07).
- Apply economic concepts and principles in making decisions about business operations (SLO #08).
- Apply basic legal concepts and principles in various business environments (SLO #09).
- Propose solutions to basic business problems while applying critical thinking methods (SLO #10).
- Apply mathematics in a financial situation (SLO #11).
- Apply statistical methods to make predictions, and draw conclusions to make a hypothesis (SLO #12).

**Career Information**

Systems Analyst; Applications Software Specialist; Entry-level Programmer; Small Business Manager

**A.S. in Web Developer**

Web Developers are proficient at creating Web site structure and interactivity. The Web Developer degree requires students to design, code, and modify websites from layout to function, in accordance to a client’s specification. Students will work with a variety of tools, environments, and applications to learn and practice website programming, scripting languages, and interacting with databases.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Manage a multi-level Web site hosted on a Web server.
- Utilize multiple programs simultaneously in order to develop Web sites.
- Recommend Web scripting language, current markup language or Web authoring software, and cascading style sheets to develop complex Web sites that are uploaded via File Transfer Protocol (FTP) to a Web server.
- Research and implement current, valid World Wide Web Consortium (W3C) standards including technical recommendations for markup languages, and other recommendations as they are introduced.
- Plan a structured approach to Web site development that identifies the information dissemination needs of a client and organizes the content effectively and efficiently in order to communicate to an identified audience; then develop and implement an appropriate Web solution.
- Utilize client-side scripting in order to manipulate interactive objects like navigation bars, forms, rollovers, other event handling, and the control of windows, frames, and/or layers.
- Develop Web solutions that include form validation and processing, server-side programming, and database-driven Web development.
- Demonstrate proficiency in the process of Web project management on a real-world Web site including design specification, research, production, modification, time estimation, and presentation.
- Write code in a currently used Web scripting language.

### Career Information

### Certificates of Achievement

#### Business Information Worker Certificate

The Business Information Worker Certificate is designed to prepare students for entry-level office and administrative support in a variety of organizations.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- (None)

Enrollment Process

Eligible students are selected for the program according to the following steps:

- (None)

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO #1. DEMONSTRATE COMMON OFFICE APPLICATIONS SKILLS.
  - Diagram and differentiate basic computer terminology and apply it to communication.
  - Construct and modify solutions to simple personal, educational or business needs applying use of office workplace computer programs.
  - Design, diagram, and construct simple file folder structure on local storage, and access files for upload/download to/from online tools.
  - Formulate expressions and construct logic comparisons using proper symbols and syntax in workplace computer programs.
  - Create and organize various types of files using various workplace computer programs.
  - Construct projects efficiently generating solutions using various workplace computer programs and shortcuts.
  - Demonstrate the mechanics and use of word processing software to organize and present data in a multicolumn, multipage newsletter format including banner, bordering, tables, text effects and embedded graphics.
  - Demonstrate appropriate pagination and word processing features to apply a formal (MLA/APA/Chicago) style of documentation in the creation of a multi-section research paper or report with Table of Contents, Index, and Bibliography.
  - Design and construct a form using multiple content controls.
  - Apply advanced Excel tools such as pivot tables, pivot charts, and templates to workbooks.
  - Create audience centric business documents to enhance readability.
  - PSLO #2. DEMONSTRATE COMMON OFFICE ADMINISTRATION SKILLS.
    - Integrate the features of working with tasks and schedules to organize both professional and personal information.
- Design and assess plans for backup and maintenance of Outlook files and information.
- Analyze trends in technologies and evaluate their effects on organizational data analysis.
- PSLO #3. DEMONSTRATE BASIC OFFICE COMMUNICATION SKILLS.
- Identify techniques to send, receive and manage email messages.
- Analyze business situations and determine appropriate methods to deliver negative and positive messages.
- PSLO #4. EXAMINE CUSTOMER SERVICE NEEDS AND REQUIREMENTS.
- Explain the elements of a service culture.
- Analyze strategies for promoting a positive service culture.
- Analyze the extent to which customer service is facilitated by the effective use of technology.

Career Information

Students who successfully complete the Business Information Worker Certificate are prepared for entry-level positions in general office environments in a variety of fields.

CIS - Computer Programmer-SQL Certificate

This certificate is designed for students who have completed the Database Analyst-SQL Certificate and aspire to be entry level programmers using the Structured Query Language (SQL). This is the second in a series of three certificate programs in Relational Database Management Systems. Courses taken towards the completion of the Database Analyst-SQL Certificate may also be used towards this certificate.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- List and describe the hardware components of a computer system and differentiate among system and application software.
- Describe and assess the relationship of operating systems to database file management.
- Devise computerized solutions in the development of databases by applying a solid foundation of algorithmic principles.
• compare and contrast hierarchical, network, and relational databases.
• design, create, and administer relational databases
• design and develop tables, forms, queries, and reports using SQL.

Career Information
Computer Operator; Programmer; Computer Systems Specialist

CIS - Database Analyst-SQL Certificate
This certificate is designed for beginning students as well as technical professionals who aspire to design, create, or administer relational databases and create client applications. Successful students will be prepared to apply for entry-level positions for industry such as business analyst. The Database Analyst Certificate is the first in a series of three certificate programs designed for the entry-level student and business user.

• devise computerized solutions in the development of databases by applying a solid foundation of algorithmic principles.
• compare and contrast hierarchical, network, and relational databases.
• design, create, and administer relational databases.
• create client applications using structured query language (SQL).

CIS - Database Design Certificate
This certificate aims at preparing the students to understand the entire design, programming methodology and life cycle of databases. This certificate is designed for the student who requires programming skills in Relational Database Management Systems (RDBMS) and Structured Query Language (SQL) techniques using ORACLE, SQLServer and or Microsoft Access.

Catalog Date: June 1, 2020

or CISC 306 Introduction to Web Page Creation (1)
or CISC 305 Introduction to the Internet (1)
Total Units: 16

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **SLO# 1:** Describe relational database technologies for desktop, enterprise and Internet platforms.
- **SLO# 2:** Analyze and employ relational database technologies to solve common business problems using standard database principles and practices.
- **SLO# 3:** Explain and discuss database theory and principles.
- **SLO# 4:** Select Entity-Relationship diagrams to solve problems related to database design.
- **SLO# 4:** Devise computerized solutions in the development of databases by applying a solid foundation of algorithmic principles and SQL.
- **SLO# 5:** Apply techniques of Structured Query Language Programming to solve problems related to information retrieval from relational databases.
- **SLO# 5:** Evaluate proposed database design solutions and create relational databases to meet stated objections

Career Information

Computer Operator; Applications Software Specialist; Programmer; Data Entry Specialist; Database Designer; Database Developer.

CIS - Information Systems Security Certificate

This certificate is designed to give students currently employed as an Information Technology (IT) professional or those currently working on their Networking degree the additional skill sets necessary to work in this rapidly growing field.

**HIGHLIGHTS:**
* Hands-on experience in a state-of-the-art computer center.
* Opportunities to work on specialized projects relating to computer information science, business and computer programming.
* Study in a field that has great employment opportunities and encompasses many careers.

**Catalog Date:** June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **SLO #01:** Evaluate the different types of access control methods in particular authentication, authorization, and audit.
- **SLO #02:** Configure a firewall to prevent unauthorized access to a network or computer. Students will also learn how to allow access to key services while maintaining an organization's security.
- **SLO #03:** Evaluate, implement and manage secure remote-access technologies, such as Internet Detection Systems (IDS), which are powerful tools used for identifying and responding to network- and host-based intrusions.
- **SLO #04:** Critique the different ways to secure an operating system. Students will learn how to maintain the integrity, authenticity, availability, and privacy of data.
- **SLO #05:** Analyze risks to a network and be able to implement a workable security policy that protects information assets from potential intrusion, damage or theft.

### Career Information

Information Security Systems Specialist; Computer Technician; Network Administrator; Network Systems Engineer—Windows; Internet Technician

### CIS - Linux Systems Administrator Certificate

This certificate provides an introductory certification for students, who are interested in Linux. This certificate allows the Linux Professional the opportunity of honing their skills on basic Linux competencies encountered with a home or small business network. Students will start by understanding the basics surrounding a successful installation and configuration of a Linux server. Further courses will provide in-depth knowledge of command-line as well as other tools needed for successful daily system administration. Finally, the needed skill-sets to provide security for a Linux-based computer in a networked environment will be emphasized. This certificate will prepare students for the SAIR Level One Certified Linux Administrator certificate.

**Guideline To Students:** SAIR candidates on the Level One Certified Linux Administrator track are required to satisfy four certification exams.

Take these courses for these Level One Certified Linux Administrator skill sets:

- CISN 300 (Linux) - Linux Installation and Configuration
- CISN 302 (Linux) - Linux System Administration
- CISN 303 - Linux Networking
- CISS 342 - Linux Security, Privacy and Ethics
Highlights:
* Hands-on experience in a state-of-the-art computer center
* Opportunities to work on specialized projects relating to computer information science, business and computer programming.
* Study in a field that has great employment opportunities and encompasses many careers.

**Catalog Date:** June 1, 2020

1\(^{(Linux)}\)

2\(^{(Linux)}\)

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- SLO #01: Understand the concepts behind free software, run levels, daemons, the kernel, basic networking and devices.
- SLO #02: Install the operating system and configure aspects of it (hard drive, X Window, etc.). Know how the startup and shutdown function works, as well as the basics of disk layout, user accounts, and common processes.
- SLO #03: Comprehend the file system structure and nature of inodes. Know how to create a rescue media, monitor resources, and apply patches.
- SLO #04: Demonstrate the layout of a Local Area Network and how to configure it with TCP/IP. List different protocols and services and how they are tested, including how they are configured in a host, a network, or an adapter.
- SLO #05: Implement basic security methods, such as shadow passwords, log events, and be able to look for commonly known trouble spots.

Career Information

The main goal of this certificate in this program is to align the courses to the job skills necessary to be a SAIR Systems Administrator for a company in Sacramento region. This certificate is intended for a person already working in the IT field, who wants to gain additional skill-sets so s/he can stay competitive in this field.

CIS - Network Helpdesk Technician Certificate

This certificate provides students the information necessary to obtain an entry-level career in the field of networking. Upon completion of this certificate, students will understand helpdesk concepts and responsibilities, hardware and software troubleshooting, and technical communication skill-sets. The fundamentals of supporting end users and a Local Area Network (LAN) will also be emphasized.

CISN 303 Network Administration - Linux Server (3)
CISS 310 Network Security Fundamentals (3)
Total Units: 20

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- Analyze the fundamentals of an operating system. Examine the relationship of the operating system to other applications programs (SLO #1).
- Demonstrate knowledge of networking technology. Judge the strengths and weaknesses of the different network operating systems and technologies (SLO #2).
- Analyze the effects of an application on a network operating system (SLO #3).
- Analyze the effects of network intruders and viruses on an application and an operating system (SLO #4).

Career Information
Computer Operator; Applications Software Specialist; Computer Technician

CIS - Object Oriented Software Development Certificate
This certification will enhance students' proficiency in the development by using Object Oriented programming languages. After this certification, the student should be able to use Java, C++, C#, and etc. to develop object oriented Programs.

Catalog Date: June 1, 2020

</table>

Total Units: 16
Enrollment Eligibility
To be eligible for enrollment in the program, the student must meet the following criteria:

- Pass CISP360, Introduction to Structured Programming, or equivalent course with a C or better.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- Formulate problems as steps so be able to solve systematically.
- Describe the principles of object oriented programming.
- Use structure programming skills proficiently in an object oriented program.
- Apply the concepts of object oriented programming skills such as reusability, portability, data encapsulation, inheritance, polymorphism and etc. to a program.
- Design and develop programs with Graphical User Interfaces.
- Use an object oriented language to develop solutions for real life projects in a team work environment.

Career Information
This certificate is designed to prepare students for advancing their study in game programming, computer science, computer engineering, software engineering, computer graphics, and other related fields for undergraduate and graduate study. It could be used for students to improve their job skills in high tech computer science, computer programming, game programming, research, teaching, etc.

CIS - Programming in C/C++ Certificate
This CIS - Programming in C/C++ certificate provides students an advanced level of C/C++ programming skill. It will prepare students in advancing their career or transferring to four-year Universities.

HIGHLIGHTS
*Hands-on experience in a state-of-the-art computer center
*Opportunities to work on specialized projects relating to computer information science, business and computer programming
*Study in a field that has great employment opportunities and encompasses many careers

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Apply Object and Structure programming in programs
- Use a C/C++ programming development tool to develop programs.
- Communicate and analyze programming problems, and determine what object-oriented programming approach would be most appropriate to resolve them.

Career Information

Computer Operator; Applications Software Specialist; Programmer; Data Entry Specialist; Systems Analyst, and Database Administrator.

CIS - Relational Database Administration Certificate

The Relational Database Administration Certificate is designed for a person who is responsible for interacting with SQL Programmers, Database Designers, Systems Administrators, and Network Engineers as well as the day-to-day operation of a Relational Database Management System. This course of study is appropriate for an entry level Database Administration position. Courses used towards the completion of the Computer Programmer - SQL certificate may also be used to satisfy the requirements of this certificate.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Analyze and list the hardware components of a computer system and differentiate among system and application software.
- Plan and design tables, forms, queries, and reports using office database application software.
- Assess and design multi-table forms, establish table relationships
- Describe the relationship of operating systems to database file management.
- Devise computerized solutions in the development of databases by applying a solid foundation of algorithmic principles.
- Compare and contrast hierarchical, network, and relational databases.
- Demonstrate ability to design, create, and administer relational databases.
- Create client applications using structured query language (SQL).
CIS - Server Administrator Certificate

This certificate is designed for Network Help-desk Technicians, who want to gain additional skill-sets to become a Windows Server Administrator. Some of the skill-sets that are necessary for this job include the ability to deploy, install, and configure the components of a network system based on the Microsoft Windows platform and Microsoft server software; the ability to manage the components of a network system on an ongoing basis; the ability to monitor and optimize the components of a network system; and the ability to diagnose and resolve problems regarding the components of a network system.

HIGHLIGHTS:
* Hands-on experience in a state-of-the-art computer lab.
* Opportunities to work on specialized projects relating to computer information science, business and computer programming.
* Study in a field that has great employment opportunities and encompasses many careers.

GUIDELINES TO STUDENTS:
* Microsoft Certified Solutions Associate (MCSA) certification requires three Microsoft exams (70-410, 70-411 and 70-412), which are covered in this certificate.
* It is recommended that students use their best judgment and talk to a counselor or a CIS instructor to help guide them with their selection of the appropriate courses for their personal and/or professional needs.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- SLO #01: Manage, implement, and maintain the typically complex computing environment of medium- to large-sized companies
- SLO #02: Manage and maintain a Windows server environment
- SLO #03: Manage, implement, and maintain a Windows server network infrastructure

Career Information
CIS - Web Programming Certificate

This certificate prepares students to design, develop, support, and maintain corporate level Web pages and full Web sites at the level of the Intranet or Internet. Additionally, this certificate will prepare students to design and develop database management applications to support Web-based commercial objectives.

HIGHLIGHTS

* Hands-on experience in a state-of-the-art computer center
* Opportunities to work on specialized projects relating to computer information science, business and computer programming
* Study in a field that has great employment opportunities and encompasses many careers

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Design, develop, support, and maintain professional Web pages.
- Demonstrate knowledge of web-related technology and media applications.
- Be competent evaluators and users of the World Wide Web.
- Adapt to technological changes and select a current solution for a given problem.
- Understand how to deal with interoperability between different products, systems, and platforms.
- Find effective solutions to maintaining and supporting web sites and related resources.

Career Information

Computer Operator; Applications Software Specialist; Programmer; Data Entry Specialist; Internet Technician

CIS - Web Publishing Certificate

This certificate is designed to give students the benefits of hands-on training in Web Page Design and Publication, Internet usage, and proficiency with web-related media applications.

HIGHLIGHTS

*Hands-on experience in a state-of-the-art computer center
*Opportunities to work on specialized projects relating to computer information science, business and computer programming
*Study in a field that has great employment opportunities and encompasses many careers

Select either Windows (through CISC 308) or Linux (through CISC 323) operating system.

CISW 310 is recommended to meet this 4-unit requirement.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Demonstrate knowledge of web-related technology and media applications.
- Be competent evaluators and users of the World Wide Web.
- Adapt to technological changes and select a current solution for a given problem.
- Understand how to deal with interoperability between different products, systems, and platforms.
- Find effective solutions to maintaining and supporting web sites and related resources.

Career Information

Applications Software Specialist; Data Entry Specialist; Computer Technician; Internet Technician

Computer Science Certificate

This program is an overview of computer programming.

Students who earn this certificate will likely be:

1) transferring as a Computer Science or Computer Engineering major to a California university campus without earning the Computer Science A.S. degree

2) learning to be a programmer to enhance their career

1Please speak with a CISP professor about which of these two courses are best for your educational goal.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO #1 Design an algorithm from data types, operations, and logic structures to solve complex problems.
- PSLO #2 Refactor a complex algorithm into single job components such as functions or modules.
- PSLO #3 Translate an algorithm into a low-level or high-level programming language.
Career Information

The North/Far North Center of Excellence, April 2019 compiled a report that gave the job prospects for software development occupations in the Sacramento region. The report found that Computer Programmers, Software Developers (Applications and Systems Software), and Web Developers have been and will continue to be in demand. The demand for these occupations is expected to increase in the Greater Sacramento region. The report noted that these careers pay well above the Sacramento County Living Wage.

Cybersecurity Certificate

This one-year and fully-online certificate provides graduates with the skills needed to defend networks and information systems against cyber-attacks. Students receive extensive hands-on experience and develop the knowledge and abilities necessary to succeed in protection of an organization’s data and operations. It is a rigorous program designed to help students master the fundamentals of cybersecurity by applying industry-accepted and emerging practices to solve real-world security problems. Upon completion of the program, students will be able to evaluate security trends, recognize best practices, and understand Information Technology security products and threats. Some career opportunities associated with this degree include: security analyst, network systems security administrator, security policy analyst, and more.

Enrollment Eligibility
To be eligible for enrollment in the program, the student must meet the following criteria:

- Students enrolling in the collaborative program would complete the program in a cohort model taking courses from three or more colleges.
- Students are required to complete the “Quest for Success” modules prior to enrollment in a cohort.
- Students must participate in student support services while enrolled in the collaborative program.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- First ten students, who have met the enrollment process, are eligible for the program.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Design and produce business information systems solutions incorporating current Information Technology, trends, security, and best practices (PSLO 1).
- Execute Linux system commands from either a keyboard or a shell script using correct command syntax (PSLO 2).
- Analyze and implement security concepts and security policies (PSLO 3).
- Analyze common threats to and vulnerabilities of computer systems and networks (PSLO 4).
- Implement and manage Cisco secure networks (PSLO 5).
- Implement network perimeter defense (PSLO 6).

Career Information

Some career opportunities associated with this degree include: security analyst, network systems security administrator, security policy analyst, and more.

Certificate

CIS - Information Technology Certificate

This certificate allows students to acquire basic core Information Technology competencies that will prepare them for a career in Computer Networking, Cybersecurity, and related fields.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Apply fundamental knowledge of computing and the current use of technology techniques, skills, and tools necessary for the computing practice. (PSLO #1, PSLO #5)
- Evaluate and solve business problems with technology solutions using qualitative and quantitative information. (PSLO #1)
- Assess user needs in the selection, creation, evaluation and administration of computer-based information systems. (PSLO #3)
- Demonstrate appreciation of the Information Technology career field and the need to be lifelong learners. (PSLO #7)

### Career Information

The Certificate in Information Technology prepares students to either enter the workforce as an entry-level computer or network support technician. Several CSUs currently offer baccalaureate IT or CT programs, as do several private universities. More CSUs are already working on build upper division programs based on the recently approved IT Model Curriculum for California Community Colleges.

### Computer Information Science - Applications (CISA)

#### CISA 305 Beginning Word Processing

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | None |
| Advisory: | BUSTEC 302, CISC 302, or CISC 310 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course introduces students to fundamental and intermediate word processing skills. The course includes basic word processing operations: formatting business documents, editing, saving, retrieving, printing text, and creating and editing simple tables. The course also includes intermediate operations: inspecting documents for hidden properties, inserting and formatting graphic elements, managing reference markers, and merging multiple documents.

#### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO1: CREATE PROFESSIONAL LOOKING BUSINESS DOCUMENTS USING WORD PROCESSING SOFTWARE
- Demonstrate ability to analyze needs and create letters, envelopes, memorandums and reports by planning, entering text, correcting, formatting, saving and printing business documents.
SLO2: EDIT AND FORMAT BUSINESS DOCUMENTS USING WORD PROCESSING COMMANDS

Demonstrate ability to edit and format documents using word processing commands and features such as: setting margins, tabs, indents and alignment; changing fonts, font sizes, and font styles; finding, replacing, moving and copying text; selecting, inserting and deleting text; creating borders, symbols, bullets and numbered lists; creating and editing tables.

SLO3: DEMONSTRATE USAGE OF THE MAIL MERGE FUNCTION

Integrate source data from different applications into business documents to create multiple, individualized copies.

CISA 306 Intermediate Word Processing

Units: 2
Hours: 36 hours LEC
Prerequisite: CISA 305 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This is a course designed to build upon previous training in the use of word processing. The course covers intermediate to advanced word processing features, such as styles, macros, outlines, document notations, forms, charts, and advanced mail merge techniques. Also covered are integrating word processing with other applications and creating documents for use on the Internet, i.e. web pages and e-mail attachments in word processing. Advanced business document formatting will also be included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO1: EDIT AND FORMAT DOCUMENTS USING INTERMEDIATE AND ADVANCED WORD PROCESSING COMMANDS
  Demonstrate ability to edit and format documents using intermediate and advanced word processing commands and features such as: creating, editing and applying styles; merging a main document with a data source file; using templates and wizards to create documents; recording and running a macro; creating and using document notations; generating and modifying outlines, tables of contents and indexes; creating and modifying forms.

- SLO2: INTEGRATE WORD PROCESSING WITH OTHER APPLICATIONS AND CREATE DOCUMENTS FOR SHARED USE
  Demonstrate ability to integrate word processing with other applications by embedding and linking a spreadsheet object into a word processing document.
  Demonstrate ability to use word processing commands and features to create Web pages such as: creating and editing hyperlinks; applying background effects; saving a word processing document as a Web page; formatting a Web page.
  Demonstrate ability to compare and combine multiple document versions, track changes, and manage document properties.

- SLO3: INSERT AND MODIFY CUSTOM DOCUMENT ELEMENTS
  Demonstrate ability to insert and modify building blocks, field codes and properties, and document controls.

CISA 308 Exploring Word Processing Software

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

The course introduces the student to the most widely used word processing software, Microsoft Word. The basic features and skills of creating, editing, formatting, inserting tables and graphics and enhancing Word documents are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO1: UTILIZE EFFICIENT TECHNIQUES IN CREATING AND FORMATTING TYPICAL BUSINESS DOCUMENTS
  Analyze document requirements and use appropriate features when creating business documents that require the integration of text, charts, and/or graphics for distribution or presentation.
  Edit content by using various features such as cut/copy/paste, sort, and merge.
CISA 315 Introduction to Electronic Spreadsheets

Units: 2  
Hours: 36 hours LEC  
Prerequisite: None.  
Advisory: CISC 302 or 310  
Transferable: CSU  
Catalog Date: June 1, 2020

This course is designed to introduce the student to the use of spreadsheet programs. The course will include: designing a spreadsheet, developing formulas for automatic calculations, using special functions, developing what-if models, producing charts, performing spreadsheet database functions, and producing reports. Students will be using mathematical concepts and skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1: CREATE A PROFESSIONAL LOOKING SPREADSHEET THAT INCLUDES ACCURATE FORMULAS, FUNCTIONS, AND formatting**
- Produce and edit data entries in a worksheet using text, numbers, formulas, and functions.
- Prepare and produce effective worksheet presentations using appropriate formats.
- Apply the appropriate use of absolute and relative addressing when creating or copying formulas.

- **SLO 2: ANALYZE DATA AND APPLY APPROPRIATE VISUAL DISPLAYS TO A SPREADSHEET**
- Evaluate worksheet data to answer what-if questions.
- Develop and modify charts, and insert and format objects.

- **SLO 3: DEVELOP AND ANALYZE DATABASE FUNCTIONS AND USE ANALYTICAL TOOLS TO SUMMARIZE DATA**
- Utilize database functions and create and analyze pivot tables.

- **SLO 4: ANALYZE AND SUMMARIZE DATA USING CONSOLIDATED SPREADSHEETS WITH LINKED REFERENCES**
- Structure spreadsheets to utilize multiple worksheets simultaneously.
- Combine and link information from multiple worksheets and workbooks.
- Configure worksheets and workbooks for sharing.

CISA 316 Intermediate Electronic Spreadsheets

Units: 2  
Hours: 36 hours LEC  
Prerequisite: CISA 315 with a grade of "C" or better  
Transferable: CSU  
Catalog Date: June 1, 2020

This course introduces students to the intermediate features of spreadsheet programs. The course will cover macros, data tables and lookup functions, logical expressions as well as advanced file operations, functions, and convenience commands. Students will follow spreadsheet templates and design their own sheets.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **ANALYZE AND SOLVE PROBLEMS USING ADVANCED FUNCTIONS IN SPREADSHEETS (SLO 1).**
• Understand and utilize advanced functions including logical functions, lookup tables and functions, filtering, and database functions.

• Understand and utilize advanced financial functions for financial analysis.

• UNDERSTAND THE PROCESSES USED TO AUTOMATE SPREADSHEET APPLICATIONS WITH RANGES, VALIDATION, AND MACROS (SLO 2).

• Understand and use Data validation tools.

• Understand and utilize Range Names functions.

• Utilize spreadsheet protection functions.

• Understand and Use MACROS.

• EVALUATE AND APPLY AN UNDERSTANDING OF THE USE OF ADVANCED SPREADSHEET APPLICATIONS FOR PROBLEM SOLVING AND ANALYSIS (SLO 3).

• Utilize Data Tables (One-Input and Two-Input) and Scenario Management functions.

• Utilize spreadsheet tools to facilitate Decision Making (Solver and Goal Seek).

• UNDERSTAND THE PROCESS TO IMPORT DATA INTO SPREADSHEETS FROM EXTERNAL APPLICATIONS AND DEVELOP THE ABILITY TO UTILIZE PROGRAMMING TECHNIQUES TO MODIFY SPREADSHEET APPLICATIONS (SLO 4).

• Understand and utilize the importing of data into spreadsheets from external databases and the Internet and utilize the data for analysis.

• Develop a basic understanding of the Visual Basic Editor to develop and modify spreadsheet applications.

CISA 318 Exploring Spreadsheet Software

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

The course acquaints the student with widely used spreadsheet software. The basic features and skills of editing a workbook, using basic formulas and functions in a workbook, formatting a workbook, inserting and formatting charts and graphics in a workbook and analyzing and presenting a workbook are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: EFFECTIVELY UTILIZE ELECTRONIC SPREADSHEET SOFTWARE TO INPUT AND MANAGE DATA
  - Plan, build, test and document worksheets
  - Differentiate methods for printing all or portions of a worksheet or workbook using standard or customized layouts for headers, footers and other documentation as well as special designs, borders, color and/or patterns, and number formats
  - Organize, copy, or move worksheet entries with an understanding of relative, mixed and absolute cell references

• SLO #2: CALCULATE AND ANALYZE DATA WITH VARIOUS ELECTRONIC SPREADSHEET FEATURES AND TOOLS
  - Create formulas and manipulate data using mathematical operators, and arrive at mathematical solutions using financial, statistical and logical functions
  - Demonstrate ability to perform basic "what-if" analysis and use Goal Seek to analyze worksheet data
  - Incorporate basic sorting, filtering, and summarizing of data using menus, toolbars, and pivot tables
  - Research the Internet and use the browse, search and hyperlink capabilities in addition to web query features to get real-time spreadsheet data from web sites

• SLO #3: ARRANGE AND APPLY APPROPRIATE VISUAL DISPLAYS FOR OPTIMAL DATA PRESENTATION
  - Choose and construct various types of charts based on the most effective and appropriate display for the given data
  - Employ page breaks, headers and footers, gridlines, row and column headings, and page orientation to best display information
CISA 320 Introduction to Database Management

This course is designed to introduce the student to the use of database management programs on the computer. The course will include designing a database; accessing, searching and updating files; and designing and producing printed reports. Students will be reading and interpreting written and oral instructions of a technical nature.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- UNDERSTAND THE BASIC FUNCTIONS OF A RELATIONAL DATABASE (SLO 1)
  - Understand database structures and types.
  - Evaluate the appropriate use of different elements of a database.
- UTILIZE A RELATIONAL DATABASE TO INPUT, RETRIEVE AND REPORT DATA (SLO 2)
  - Analyze the needs and requirements of a database and design an appropriate structure.
  - Understand basic database functions such as developing a query and sorting, searching, filtering, and calculating data.
  - Design and produce database reports.

CISA 321 Intermediate Database Management

This course will extend the capabilities of students who have started to use a microcomputer database. Topics and laboratory will include complex relational databases, form design, intermediate report design, advanced queries, OLE objects, macros and an introduction to visual programming.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEVELOP AN UNDERSTANDING OF ADVANCED QUERIES IN A RELATIONAL DATABASE (SLO 1)
  - Design complex queries using advanced processes such as: Pattern Match, List of Values Match, Not Operators, Parameter queries, and Cross-tab queries.
  - Incorporate Lookup functions to simplify data retrieval.
  - Integrate Data Validation rules to limit errors in databases.
- DESIGN AND DEVELOP CUSTOM FORMS FOR RELATIONAL DATABASES (SLO 2)
  - Create custom forms so that database input documents reflect non-database input sources.
  - Structure sub-forms so that data from related tables is viewable on a single form.
- DESIGN AND DEVELOP CUSTOM REPORTS FOR RELATIONAL DATABASES (SLO 3)
  - Plan customized reports to improve the presentation of database information.
  - Design queries to complete data required for custom reports.
CISA 340 Presentation Graphics

This course is an introduction to the use of the computer to generate graphics used in business. Topics covered include: hardware (screens, printers, input devices), software (paint, chart, CAD), types of graphics (pictures, graphs, charts, designs).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: UTILIZE PRESENTATION GRAPHICS SOFTWARE FOR PRESENTATION DEVELOPMENT
  - develop pictures, graphs, charts, and designs using the software.
  - integrate graphics, animation, text, and charts in the development of a presentation.

- SLO 2: DISTINGUISH BETWEEN VARIOUS FILES AND SYSTEM REQUIREMENTS
  - demonstrate understanding of fundamental hardware and software concepts including terminology, evaluation, installation and use.
  - evaluate types of graphics available, types of files, and system requirements.
  - link graphics presentations to Web sites.

- SLO 3: PLAN, PREPARE AND PRESENT ON-SCREEN PRESENTATIONS.
  - apply audience analysis techniques to establish criteria and best approach to presentation.

Computer Information Science - Core (CISC)

CISC 295 Independent Studies in Computer Information Science - Core

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
  - Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
  - Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
  - Use information resources to gather discipline-specific information.
  - SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
  - Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
  - Explain the importance of the major discipline of study in the broader picture of society.
CISC 302 Computer Familiarization

Same As: JOUR 330
Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: BUSTEC 302
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This is an introductory course to provide general knowledge on how computers work, computer terminology and the impact of computers on society and the work environment. Beginning level hands-on instruction using an operating system, word processing software, spreadsheet software, database software, email and the Internet will be emphasized. Students will be reading and interpreting written and oral instructions of a technical nature. This course is the same as JOUR 330, and only one may be taken for credit. See "Cross-Listed Courses" in the catalog.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO1: DESCRIBE BASIC HARDWARE AND SOFTWARE REQUIREMENTS FOR A PERSONAL COMPUTER
  Identify different hardware required for input, output, processing and storage of data on a personal computer
  Apply appropriate log on techniques to access lab computers and online course management software

- SLO2: UTILIZE OPERATING SYSTEM TO EFFECTIVELY MANAGE PROGRAMS, FILES AND FOLDERS
  Demonstrate ability to retrieve, create, copy, move and delete files and folders within a file management hierarchy
  Locate and launch programs successfully

- SLO3: DIFFERENTIATE BETWEEN, AND APPLY BASIC CONCEPTS FOR BUSINESS APPLICATION SOFTWARE
  Define and correctly select appropriate program for a given task
  Demonstrate ability with word processing commands and features such as cursor movement, entering text; formatting including setting margins, line spacing, bold, centering, underlining, changing font typeface and size; inserting clip art; saving, printing, retrieving, and editing a file; spelling checker
  Demonstrate ability with spreadsheet commands and features such as cursor movement; entering text, values and formulas; formatting including changing column widths, bold, centering, underlining, changing font typeface and size, formatting numbers with dollar signs; inserting and deleting rows and columns; saving, printing, retrieving, and editing a file; spelling checker
  Demonstrate ability with database commands and features such as creating a database, creating tables, creating fields, setting field widths, positioning fields, entering data through tables or forms, designing forms, formatting forms, creating reports, displaying records, changing page orientation, saving, and printing

- SLO4: COMMUNICATE, SHARE, AND ACCESS INFORMATION ELECTRONICALLY
  Utilize e-mail commands and features to communicate appropriately, sending and receiving messages, including attachments.
  Operate search engines, browsers, and related web tools to effectively find information on the World Wide Web
  Evaluate web sites for accuracy based on specific criteria

CISC 305 Introduction to the Internet
This course is an introduction to how the Internet works and how to effectively use basic Internet services. Topics include browser basics, search engines and search techniques, E-mail, the World Wide Web, Internet security, Internet resources, the Cloud, social networking, and building basic web pages using HTML.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: IDENTIFY AND ACCESS VARIOUS INFORMATION SOURCES.
  describe the structure of the Internet, the Domain Name System, and connectivity options.

- SLO 2: DISTINGUISH BETWEEN VARIOUS INTERNET SERVICES
  distinguish between and use the World Wide Web, a browser, E-mail, FTP, and Social Media services.

- SLO 3: UTILIZE INTERNET SERVICES AND TECHNOLOGY
  download, attach, view, and print files from the Internet.
  create a personal web page following a predefined format.

CISC 306 Introduction to Web Page Creation

The student will be able to produce a Web page, including design, layout, construction, and presentation. HTML will be used to format a Web page.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EXAMINE AND PRACTICE WEB PAGE CREATION.
  evaluate content needs and apply appropriate design techniques.
  design a Web page.

- SLO 2: CREATE WEB DOCUMENTS USING CODE.
  Use XHTML to format Web pages.
  present a completed Web page.
  Evaluate design enhancements.

CISC 308 Exploring Computer Environments and the Internet

The student will be able to produce a Web page, including design, layout, construction, and presentation. HTML will be used to format a Web page.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EXAMINE AND PRACTICE WEB PAGE CREATION.
  evaluate content needs and apply appropriate design techniques.
  design a Web page.

- SLO 2: CREATE WEB DOCUMENTS USING CODE.
  Use XHTML to format Web pages.
  present a completed Web page.
  Evaluate design enhancements.
The course acquaints the student with the fundamentals of microcomputer hardware, software and computer networking, focusing on widely used hardware and operating systems, Intel-based PCs and the Windows operating system. The fundamentals of the Internet and Internet tools are introduced, as well as effective electronic communication.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: DIFFERENTIATE AND APPLY BASIC CONCEPTS OF OPERATING SYSTEMS AND COMPUTER HARDWARE.
  
  Explain how computers work, as well as the functions of basic computer components.

- Design a customized computer system utilizing the control panel and other accessories.

- Use appropriate commands to capture and print screens.

- List and discuss basic operating system and Internet terminology and concepts.

- SLO #2: ORGANIZE COMPUTER FILES AND FOLDERS.
  
  Manage files by utilizing effective procedures for creating, modifying, moving, copying, renaming, and deleting files and folders.

- Utilize effective operating system search techniques to locate files, folders and data stored on various drives using various filenames and wildcards.

- Utilize all frequently used operating system commands required to store, manage, back-up, access and maintain files stored on either network, hard drives or other external storage devices.

- SLO #3: RESEARCH AND APPLY INTERNET CONCEPTS AND SEARCH TECHNIQUES.
  
  Choose appropriate settings to control the behavior of web browsers.

- Demonstrate use of efficient Internet search techniques using search engines and subject directories.

- Create and manage Favorites, links, and browser home page settings.

- Identify some of the various security threats from Internet access and which operating system tools could be appropriate protection.

- Demonstrate effective use of electronic communication techniques.

CISC 310 Introduction to Computer Information Science

3 Units: 54 hours LEC

This course examines information systems and their role in business, including database management systems, networking, e-commerce, ethics and security, and system infrastructure. Student will apply these concepts and related methods through hands-on projects to develop computer-based solutions to business problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- UNDERSTAND EXISTING AND EMERGING TECHNOLOGIES AND THEIR IMPACT ON ORGANIZATIONS AND SOCIETY. (SLO#1).

- explain how a computer system works.

- distinguish the various hardware and software components of a computer system.

- differentiate between the most commonly used computer operating systems.

- differentiate between system software and application software.

- assess the differences between each of the categories of system and application software.

- evaluate the social issues pertaining to computer technology including ethics, copyright, privacy and security.
DEMONSTRATE AN UNDERSTANDING OF THE DEVELOPMENT AND USE OF INFORMATION SYSTEMS IN BUSINESS (SLO#2).

differentiate between various computer network types and scopes.

demonstrate the secure utilization of Internet resources.

demonstrate use of cloud-based applications and cloud-based file storage.

recommend methods for accessing business information systems.

discuss and relate the phases of the System Development Life Cycle.

compare various digital media file types.

propose methods for securing business information systems.

SOLVE COMMON BUSINESS PROBLEMS USING APPROPRIATE INFORMATION TECHNOLOGY APPLICATIONS AND SYSTEMS (SLO#3).

construct solutions to common business problems using electronic spreadsheets.

manipulate databases using database software.

build software solutions to business problems using internet technologies.

CISC 323 Linux Operating System

Units: 1
Hours: 18 hours LEC
Prerequisites: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the Linux operating system for desktop computers. Concepts include kernels, file structures, Daemons, shells, GUIs, procedures for installing software, creation of user accounts, shell commands, scripts, and file security.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #01: ANALYZE THE FUNDAMENTALS OF AN OPERATING SYSTEM.
  - Demonstrate use of basic Linux commands and editing, disk, file, and printer management feature.
  - Compare Linux with other operating systems.
- SLO #02: EVALUATE SERVER HARDWARE.
  - Analyze hard disk and memory management.
  - Compare physical and logical drives and describe their functionality.
- SLO #03: ASSESS COMMON APPLICATIONS, PROTOCOLS, MEDIA AND SOFTWARE.
  - Analyze the relationship of the operating system to other applications programs.
  - Evaluate and formulate various command lines with correct syntax.

CISC 324 Intermediate Linux Operating System

Units: 1
Hours: 18 hours LEC
Prerequisites: CISC 323 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the Linux operating system for desktop computers. It covers advanced shell scripting, C Shell, K Shell, and BASH. Other topics covered in this course include decision-making logic, looping, and nesting. Consult the class schedule for specific operating system offered.
CISC 356 Introduction to Local Area Networks

Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

From hubs to servers this course will introduce students to the exciting field of computer networking. Beginners will become comfortable with the concepts and vocabulary of computer networking and will gain hands-on experience in basic networking technology. Some topics include the Internet and its tools; the diversity of Network Operating Systems one can use in a Local Area Network; how to configure communication protocols, such as TCP/IP; the distinction between a Local Area Network and a Wide Area Network; and the fundamentals of network architecture and design.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EXPLAIN AND CONFIGURE BASIC FUNCTIONS AND PROPERTIES OF NETWORK OPERATING SYSTEMS FOUND ON TYPICAL LOCAL AREA NETWORKS (LANS) (SLO #01).
- Explain the fundamentals of network operating systems.
Describe the basic steps of network operating system installation.

Configure network services.

DIFFERENTIATE BETWEEN CLIENT/SERVER AND CENTRALIZED NETWORKING ENVIRONMENTS (SLO #02).

Discuss the differences between centralized and client/server computing.

Identify and configure the functions of clients, servers and other networking equipment that make up a typical LAN.

Discuss the basics of cloud computing.

ASSESS BASIC NETWORK SECURITY REQUIREMENTS AND IMPLEMENT BASIC NETWORK SECURITY TOOLS (SLO #03).

Develop a network security policy.

Assess the physical security of network equipment.

Understand network data security.

DEMONSTRATE AND TEST BASIC LAN ADMINISTRATION AND SUPPORT TASKS (SLO #04).

Manage network accounts.

Monitor network performance.

Protect network servers from data loss.

DISCUSS VARIOUS METHODS FOR CONNECTING LANS TO WIDE AREA NETWORKS (WANS) (SLO #05).

Discuss the technologies used in connecting LANs to WANs.

Explain some of the terminology used in implementing WANs.

Configure and describe remote access protocols.

EXPLAIN AND DEMONSTRATE DIFFERENT APPROACHES TO NETWORK PLANNING AND TROUBLESHOOTING (SLO #06).

Describe the benefits of network management and planning.

Explain different approaches to network troubleshooting.

Explain the types of specialized equipment and other resources for troubleshooting.

Describe basic measures to take in common troubleshooting situations.
• OPERATE PERSONAL COMPUTERS, DEVICES, AND SOFTWARE FOR END USERS (SLO #02).
  
• define and correctly select an appropriate program for a given task.
• use the commands and features of office application software.
• use e-mail commands and features to send and receive messages, including attachments.
• demonstrate effective file management techniques.
• differentiate between various digital media file types.
• locate and launch programs successfully.
• differentiate between the most commonly used computer operating systems.
• differentiate between system software and application software.

• DEMONSTRATE BASIC DATA NETWORKING AND SECURITY/FORENSICS TECHNIQUES (SLO #03).

• differentiate between various computer network types and scopes.
• install and configure network adapters for effective operation on various networks.
• DEMONSTRATE BASIC VIRTUALIZATION, DESKTOP IMAGING, AND DEPLOYMENT OPERATIONS (SLO #04).
• prepare various operating system installation and deployment activities.
• install and configure operating systems in virtual environment.

• PROPERLY AND SAFELY DIAGNOSE, RESOLVE AND RECORD COMMON HARDWARE AND SOFTWARE ISSUES WHILE APPLYING TROUBLESHOOTING SKILLS (SLO #05).

• demonstrate effective troubleshooting techniques.
• operate search engines, browsers, and related web tools to effectively find information on the World Wide Web.
• demonstrate the secure utilization of Internet resources.
• PRACTICE APPROPRIATE CUSTOMER SUPPORT TECHNIQUES (SLO #06).

• demonstrate knowledge of the changing workplace, the work-site team and environment, and ethical behavior.
• analyze customer concerns effectively.
• address customer concerns appropriately and timely.

CISC 495 Independent Studies in Computer Information Science - Core

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

• Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

• Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

• Use information resources to gather discipline-specific information.
SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

Explain the importance of the major discipline of study in the broader picture of society.

SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

CISC 498 Work Experience in Computer Information Science - Core

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Computer Information Science.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE'S CAREER,(SLO 1)
- Understand the effects time, stress, and organizational management have on performance.
- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
- Examine the career/life planning process and relate its relevancy to the student.
- Demonstrate an understanding of basic communication tools and their appropriate use.
- Demonstrate an understanding of workplace etiquette.
- DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER,(SLO 2)
- Link personal goals to long term achievement.
- Display an understanding of creating a professional first impression.
- Understand how networking is a powerful job search tool.
- Understand necessary elements of a résumé.
- Understand the importance of interview preparation.
- Identify how continual learning increases career success.
- DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR,(SLO 3)
This course will provide a student with the knowledge and skills required to build, maintain, troubleshoot and support server hardware and software technologies. The student will be able to identify environmental issues; understand and comply with disaster recovery and physical/software security procedures; become familiar with industry terminology and concepts; understand server roles/specializations and interaction within the overall computing environment. Consult the class schedule for specific operating system offered.

Upon completion of this course, the student will be able to:

- **SLO #01: EXAMINE SERVER FUNDAMENTALS**
  - Differentiate between peer-to-peer and client-server networking models
  - Investigate server functions and benefits

- **SLO #02: IDENTIFY THE HARDWARE COMPONENTS OF A SERVER**
  - Identify characteristics that distinguish server hardware from client hardware
  - Rank user demands on a server
  - Optimize server placement

- **SLO #03: EVALUATE SERVER HARDWARE**
  - Evaluate motherboard buses
  - Inspect common server processors, and common types of memory
  - Contrast how clock frequency affects performance
  - Compare physical and logical drives and describe their functionality
  - Identify characteristics of the IDE interface and configure IDE cabling and connectors

- **SLO #04: DESCRIBE THE FEATURES OF SERVER SOFTWARE**
  - Calculate, adequately test and pilot the server upgrade
  - Verify the availability of system resources

- **SLO #05: ASSESS COMMON NETWORKING PROTOCOLS, TOPOLOGIES, MEDIA AND EQUIPMENT**
  - Examine bus, ring, and star network topologies
  - Describe Token Ring and Ethernet media access methods
  - Uncover the purpose behind bridges, switches, hubs, and routers
  - Discuss NetBEUI, IPX/SPX, and TCP/IP protocols

- **SLO #06: CONTRAST DIFFERENT SERVER SOFTWARE**
  - Identify network operating system characteristics and versions
  - Examine network operating system hardware requirements
  - Judge different network operating system installations and upgrades techniques
CISN 301 Network Client Systems Administration

This course covers the administration of a client in a client/server network. Topics include designing a basic network, installing and configuring a client network operating system, managing network security with user and group accounts, creating directory structures and network shares, setting up and managing network printers, backing up servers, monitoring and troubleshooting network resources, and establishing policies and procedures for network operations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #01: DEDUCE THE DIFFERENCE BETWEEN A NETWORK CLIENT OPERATING SYSTEM AND A NETWORK SERVER OPERATING SYSTEM
- Evaluate client operating system support features
- Identify the role of a network client operating system in the enterprise
- SLO #02: DISTINGUISH BETWEEN THE VARIOUS INSTALLATION METHODS
- Assess the needs to upgrade from a previous operating system version
- Measure ways to migrate existing user environments to a new installation
- Inspect post-installation updates and product activation
- Reason the cause for failed installations
- SLO #03: EVALUATE METHODS TO MANAGE DISKS, FILE SYSTEMS, AND PERIPHERALS DEVICES
- Investigate, configure, and troubleshoot volumes and disks
- Design and configure removable media, such as tape devices, DVD and CD-ROM devices
- Manage, configure, and troubleshoot input and output (I/O) devices
- Manage printers and fax devices
- Manage print jobs
- SLO #04: MANAGE AND CONFIGURE THE USER'S EXPERIENCE
- Choose accessibility settings
- Manage desktop components
- Manage display options
- Choose regional and language settings
- Manage users' profiles and data
- SLO #05: MANAGE APPLICATIONS
- Manage distribution of applications
- Investigate, and troubleshoot application compatibility with the network client operating system
- Manage and configure a web browser
- SLO #06: DISCOVER HOW TO CONNECT A NETWORK CLIENT OPERATING SYSTEM TO A NETWORK
- Investigate how to configure a wireless network
- Assess how to connect to a virtual private network (VPN)
- Manage and configure Remote Desktop and Remote Assistance
- Configure and troubleshoot the TCP/IP protocol
- SLO #07: MANAGE USERS AND GROUPS
- Manage user account properties
- Manage and troubleshoot cached credentials
- Manage user and group rights
- SLO #08: PLAN FOR COMPUTER SECURITY, RECOVERY AND PERFORMANCE
- Manage security configuration with templates
- Discover how to back up and restore systems and data
- Establish, implement, and monitor a security audit policy
- Monitor system performance
- Manage scheduled tasks
- Infer how to optimize memory, disk, and CPU performance

CISN 302 Intermediate Network Systems Administration

**Units:** 3  
**Hours:** 45 hours LEC; 27 hours LAB  
**Prerequisites:** CISN 300 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers advanced administrative tasks of a server in a client/server network. Topics include configuring the server environment, implementing system policies, implementing and managing fault-tolerant disk volumes, managing applications, installing and managing connectivity for different network and client operating systems, managing remote servers, implementing directory replication and file synchronization, and troubleshooting advanced network problems.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #01: EXAMINE NETWORK SERVICES
  - Measure the purpose of the Dynamic Host Configuration Protocol (DHCP) and how it streamlines network administration
  - Evaluate the process of name resolution (DNS) and why it is important to an organization
  - Set up a File Server
- SLO #02: DESIGN NETWORK SECURITY
  - Rate the network security protocols used for authorization
  - Research the basics of a security model
  - Examine user rights and understand the difference between a user right and a permission
  - Compile server security using security baseline settings and audit security settings
- SLO #03: MAKE BACKUP AND RECOVERY PLANS
  - Recommend a backup strategy
- Compile Backup Files
- Investigate the primary methods and devices used to back up critical data
- Research methods for creating a high-availability network
- Determine key server management and disaster recovery strategies for preserving system uptime

**SLO #04: SUPPORT THE NETWORK INFRASTRUCTURE**
- Evaluate network traffic
- Resolve issues related to service dependency
- Diagnose network connectivity issues
- Evaluate routing protocols, routing tables, and routing ports

---

**CISN 303 Network Administration - Linux Server**

- **Units:** 3
- **Hours:** 45 hours LEC; 27 hours LAB
- **Prerequisite:** CISN 300 with a grade of "C" or better
- **Transferable:** CSU
- **Catalog Date:** June 1, 2020

This course provides introductory coverage of Linux Network Administration. The course maps to the CompTIA Linux+ certification exam, and to SAIR/GNU's Linux Networking course. Specific course topic coverage includes: introducing Linux; exploring the desktop; using the Shell; understanding users and file systems; understanding text processing; managing processes; using network clients; installing Linux; understanding system initialization; managing software packages and file systems; managing users; configuring networks; system and kernel management; writing Shell scripts; and advanced topics and troubleshooting. The course requires many hands-on projects, which allow students to practice what they learn.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #01: EXAMINE THE BASIC FEATURES OF THE LINUX OPERATING SYSTEM IN COMPARISON TO OTHER OPERATING SYSTEMS**
  - Describe how Linux was created and how it compares to other operating systems
  - Outline the skills required and challenges facing a system administrator
  - Distinguish between the graphical system used by Linux and command line
  - Support the basic features of the GNOME and KDE desktop interfaces

- **SLO #02: UTILIZE THE SHELL AND EVALUATE ITS FUNCTIONALITY**
  - Manipulate variables in the shell to control the working environment
  - Formulate data at the command-line and for print files
  - Manipulate text using the vi editor
  - Create and manage user and group accounts
  - Construct access permissions on files and directories

- **SLO #03: COMPARE AND CONTRAST DIFFERENT LINUX NETWORK TOOLS**
  - Demonstrate how to log in to a Linux system over a network connection. Describe how it is different from a Windows network connection.
  - Select the appropriate command-line tools for common network services such as FTP and the Web
  - Illustrate the difference between network interfaces using command-line and graphical utilities
  - Apply the skill necessary to set up a simple DHCP server, and manage networked printing services

- **SLO #04: ANALYZE AND ARTICULATE THE BASIC STEPS OF A LINUX SOFTWARE INSTALLATION**
  - Analyze the hardware components of your computer system
  - Design a hard disk space to hold a new Linux installation
Describe the steps that hardware starts a standard PC operating system

Explain the difference between the LILO and GRUB boot loader

Create the init program and the scripts used to start system services

Manage system services after start-up

CISN 304 Networking Technologies

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None.
Advisory: CISC 310 with a grade of "C" or better
Transferable: CSU
C-ID: C-ID ITIS 150
Catalog Date: June 1, 2020

This course introduces the architecture, structure, functions, components, and models of the Internet and other computer networks. The principles and structure of IP (Internet Protocol) addressing and the fundamentals of Ethernet concepts, media, and operations are introduced to provide a foundation for further study of computer networks. It uses the OSI (Open Systems Interconnection) and TCP (Transmission Control Protocol) layered models to examine the nature and roles of protocols and services at the application, network, data link, and physical layers. Preparation for the CompTIA Network+ certification exam.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- IDENTIFY THE PURPOSE AND FUNCTION OF THE MOST WIDELY USED PROTOCOLS (SLO #01).
- List the services provided by network protocols.
- Describe how protocols enable networked computers to communicate.
- IDENTIFY THE LAYERS OF THE OSI MODEL (SLO #02).
- Describe the functions associated with each of the OSI model layers.
- LIST THE CABLING TOPOLOGIES USED TO BUILD LOCAL AREA NETWORKS (SLO #03).
- Name the types of cables used to build LANs.
- List the grading systems used for the various cable types.
- Describe how to install cables externally, secure them in place, and run them around common obstacles.
- Explain the steps involved in an internal cable installation.
- Describe the wiring of a crossover cable.
- DESCRIBE THE FUNCTION OF TYPICAL NETWORKING HARDWARE (SLO #04).
- Associate the importance of the troubleshooting process with a network interface adapter.
- Describe the difference between a hub, switch and a router. Understand the functions of each.
- LIST THE ETHERNET PHYSICAL LAYER STANDARDS (SLO #05).
- Describe the functions of the Ethernet frame.
- List the physical layer options for Token Ring networks.
- Distinguish between the various types of FDDI network connections.
- DESCRIBE THE FUNCTIONS OF THE INTERNET PROTOCOL (IP) PROTOCOL AND THE VARIOUS IP HEADER FIELDS (SLO #06).
- Summarize the basics of IP addressing, routing, and fragmentation.
- Describe the functions of the Internetwork Packet Exchange (IPX) protocol and the various IPX header fields.
- List the function of the Address Resolution Protocol (ARP).
- Describe the functions of the Internet Control Message Protocol (ICMP).
- Describe the properties of TCP/IP's application layer protocols.
CISN 306 Advanced Network Systems Administration

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisites: CISN 302 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

Students will learn to install, configure, and administer Microsoft Windows Active Directory services. The course also focuses on implementing Group Policy and understanding the Group Policy tasks required to centrally manage users and computers. Students will use Group Policies to configure and manage the user desktop environment, to configure and manage software, and implement and manage security settings. Students will install and manage Windows Domains and Domain Controllers through Active Directory.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #01: UNCOVER KEY NETWORK ARCHITECTURES, TOPOLOGIES, INTERDEPENDENCIES AND CONSTRAINTS
- Conceive the key sources of information with respect to architecture and topology
- Design sample networking and operating environments
Examine various network architecture, topology, hardware and software
Set up and use Microsoft Windows Active Directory
Set up and use Domain Name System (DNS) to support an installation of Active Directory
SLO #02: PREPARE OVERALL DESIGN AND INTEGRATION PLAN FOR IMPLEMENTING AN ACTIVE DIRECTORY INFRASTRUCTURE
Analyze and collect information about a network
Analyze situations and information and formulate a plan of action that is in line with business and financial constraints
Create and manage Trees and Forests in a Windows environment
Analyze the needs of a network and suggest modifications to technological systems
Analyze the needs of a network and recommend tradeoffs when necessary
SLO #03: PERFORM SERVER AND SYSTEM CONFIGURATION AND SOFTWARE LOADING
Analyze and correct operational problems with a Windows Domain Controller promotion
Implement new applications available with Windows Advanced Server
Manage software with Group Policies
Manage user environments, scripts, redirect user folders, and troubleshoot user environment management with Group Policies
SLO #04: SET UP AND MAINTAIN USER ACCOUNTS
Examine the purpose of user accounts and the requirements for new user accounts
Create and maintain user accounts using Windows account options
Create multiple user accounts by importing user information into Active Directory
Resolve issues with user account policies
SLO #05: DEVELOP AND IMPLEMENT SECURITY PROCEDURES
Assess the needs for security
Manage access to domain resources using Groups
Assess and modify policies/procedures
SLO #06: PERFORM NETWORK MAINTENANCE
Evaluate the importance of errors
Manage a network using Microsoft Active Directory management tools
Resolve common problems with publishing resources in Active Directory
Manage Active Directory replication
Manage Operations Masters roles

CISN 341 CISCO Networking Academy (CCNA)™: Networking Theory and Routing Technologies

This course covers networking theory and routing technologies, including the OSI Model, beginning router configurations, and routed and routing protocols. It prepares students for the CISCO Certified Network Associate (CCNA) certification examination. It also continues and expands the study of binary, decimal, and hexadecimal numbering systems to change variable length sub-net mass.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
TROUBLESHOOT AND SOLVE ROUTING PROBLEMS WITHIN A ROUTING DOMAIN (SLO 1).
Understand and describe the purpose, nature, and operations of a router, routing tables, and the route lookup process, dynamic routing protocols, distance vector routing protocols, and link-state routing protocols, the purpose and types of access control lists (ACLs), and the operations and benefits of Dynamic Host Configuration Protocol (DHCP), Domain Name System (DNS) for IPv4 and IPv6, and Network Address Translation (NAT).

CONFIGURE AND TROUBLESHOOT BASIC OPERATIONS OF A SMALL SWITCHED NETWORK (SLO 2).
Configure and verify static routing and default routing; configure and troubleshoot basic operations of routers in a small routed network including Routing Information Protocol (RIPv1 and RIPv2) and Open Shortest Path First (OSPF) protocol (single-area OSPF); Configure, monitor, and troubleshoot ACLs for IPv4 and IPv6; and configure and troubleshoot NAT operations.

CONFIGURE AND TROUBLESHOOT VLANS IN A SMALL SWITCHED NETWORK (SLO 3).
Describe basic switching concepts, how VLANs create logically separate networks and how routing occurs between them, and enhanced switching technologies such as VLANs, VLAN Trunking Protocol (VTP), Rapid Spanning Tree Protocol (RSTP), Per VLAN Spanning Tree Protocol (PVSTP), and 802.1q.
Configure and troubleshoot basic operations of a small switched network, VLANs, and inter-VLAN routing.

CISN 374 Messaging Server Administration

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisites: CISN 302 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides students with the knowledge and skills required to deploy and administer/support Microsoft Exchange Server. This course covers use of Exchange Server to create and manage recipient objects; maintain an existing Exchange Server organization, as well as design and implement a new organization; create and manage public folders; perform basic backup procedures; monitor server performance and configure link monitors between connected sites; and manage electronic forms in an organization. The student will also create and configure the various messaging connectors; configure directory and public folders replication; and configure Exchange Server for connectivity to the Internet. The course also examines how Exchange Server provides for connectivity to other messaging systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #01: CONFIGURE, INSTALL AND TROUBLESHOOT MESSENGER SERVER
  - Analyze the purpose of Active Directory
  - Investigate the different Active Directory elements
  - Install and configure messaging server software for clients and message recipients
  - Explore Exchange Server, protocols and services integration

- SLO #02: MANAGE, MONITOR, AND TROUBLESHOOT BACK-END AND FRONT-END EXCHANGE SERVER 2003 SERVERS
  - Plan for post implementation configuration
  - Choose an administrative model
  - Plan administrative groups
  - Plan operation mode—switch to native mode whenever possible
  - Plan server configuration—decide whether to use front-end and back-end
  - Plan for firewall configuration
  - Manage clusters and front-end and back-end servers

- SLO #03: MANAGE AND TROUBLESHOOT PUBLIC FOLDERS AND VIRTUAL SERVERS
  - Comprehend the functions and benefits of public folders
  - Create public folders
  - Set up a default public folder tree and general-purpose public folder trees
CISN 378 Database Administration for Microsoft SQL Server

Units: 3  
Hours: 45 hours LEC; 27 hours LAB  
Prerequisite: CISN 302 with a grade of "C" or better  
Transferable: CSU  
Catalog Date: June 1, 2020

This course provides students with the knowledge and technical skills required to install, configure, administer, and troubleshoot the client/server database management system of Microsoft SQL Server. The student will also learn to manage files and databases; choose and configure a login security method; plan and implement database permissions; secure SQL Server in an enterprise network; perform and automate administrative tasks; create custom administrative tools; monitor and optimize SQL Server performance; and replicate data from one SQL Server to another.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #01: DEVELOP AND IMPLEMENT INSTALLATION OF SQL SERVER
  - Research the hardware and software requirements for Microsoft SQL Server and the SQL Server management tools
  - Deduce the various SQL Server Editions and the selection criteria for choosing each
  - Deduce the upgrade process for an installed SQL Server
  - Analyze the different licensing modes
  - Verify the proper software installation options that are appropriate for your environment

- SLO #02: SET UP AND USE PROPER ADMINISTRATIVE PROCEDURES
  - Manage the tools and Transact-SQL statements used to create and modify a database
  - Identify and perform common SQL Server configuration tasks
  - Identify and perform routine database administration tasks
  - Identify and automate routine maintenance tasks by creating and scheduling jobs
Student Learning Outcomes

- Create alerts and operators
- Identify and use administrative jobs in a multi-server environment
- Analyze a strategy for maintaining the high-availability of SQL Server
- SLO #03: ANALYZE AND IMPLEMENT SECURITY PROCEDURES
  - Identify basic security concepts including system, end-user and operational security
  - Infer the difference between Microsoft’s Windows Authentication Mode and Mixed Authentication Mode
  - Manage SQL Server security in the enterprise environment
  - Assign login accounts to database user accounts and roles
  - Assign permissions to user accounts and roles
  - Manage security with views and stored procedures
  - Create and use application roles to manage application security
- SLO #04: ANALYZE THE DIFFERENT WAYS TO TRANSFER DATA
  - Reason the process of, importing, exporting, and transforming data
  - Identify and use the tools for importing and exporting data in Microsoft SQL Server
  - Create a DTS package to transform and import and export data using Data Transformation Services (DTS)
- SLO #05: ANALYZE THE DIFFERENT WAYS TO DISTRIBUTE DATA
  - Identify the various methods to distribute data and the criteria for using each
  - Discover how each of the SQL Server replication agents are used
  - Discover the different SQL Server replication types and the business reasons for using each
  - Discover the different physical replication models and the topology in which each model would be used
- SLO #06: PERFORM SYSTEM BACKUPS AND RESTORE DATA
  - Manage a system backup and restoration procedure
  - Set up a backup for either a user or a system databases by using Transact-SQL statements and SQL Server Enterprise Manager
  - Set up a restore for either a user or a system databases by using Transact-SQL statements and SQL Server Enterprise Manager
  - Identify system problems and correct them, if necessary
- SLO #07: CREATE AND PRESENT REPORTS
  - Analyze and synthesize information
  - Analyze and identify networking improvements
  - Create reports using word processing and other presentation software
  - Create and present well-organized reports to a variety of audiences

CISN 490 Networking Helpdesk Practicum

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisites: CISC 360, CISN 300, and CISN 304 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on key information and skills for user support professionals, including troubleshooting and problem solving, successful communication with users, determining a client's specific needs, and training end users. For those considering entering the field, alternate career paths for user-support workers are covered. With balanced coverage of both people skills and technical skills, this course is an excellent resource for those in or preparing for the technical-support field. Students are required to support end-users for twenty hours either on or off campus as part of this class.
Upon completion of this course, the student will be able to:

- **SUMMARIZE THE NEED FOR EFFECTIVE COMPUTER USER SUPPORT (SLO #01).**
  - Define the term end-user computing and briefly describe the developments that led to end-user computing and user support.
  - Describe the characteristics of early computer systems.
  - Describe a microcomputer.
  - Discuss the basic hardware and add-on peripherals that are commonly used.
  - Define the total cost of ownership (TCO).
  - Discuss the different types of user support and names for user support personnel, including help desk, call center, and technical support.

- **DEMONSTRATE EFFECTIVE COMMUNICATION SKILLS (SLO #02).**
  - Define the term customer-service ethic and explain why organizations place so much emphasis on excellent customer service.
  - Discuss strategies for building understanding.
  - Define the term incident management strategy.
  - Categorize the four dimensions of personality measured on the Myers-Briggs Type Indicator (MBTI) personality analysis.
  - Describe a difficult client.

- **REVIEW THE SKILLS FOR TROUBLESHOOTING COMPUTER PROBLEMS (SLO #03).**
  - Define the term troubleshooting and explain that troubleshooting computer problems is an iterative process that does not have a fixed series of steps.
  - Define the term problem solving and explain how problem solving might apply to fixing a malfunctioning printer, for example.
  - Explain how troubleshooters must use decision-making skills to choose between several possible solutions to a problem.
  - Describe the different ways that troubleshooters must use communication skills to get information about the problem and to communicate the solution.
  - Explain that active listening plays an important role in understanding the problem. Paraphrasing can be helpful in making sure the troubleshooter has an accurate picture of what is going on.
  - Define the term escalation and explain how this approach can help solve a problem that does not yield to more common methods.
  - Define the term replication and explain how this strategy can help to solve a problem.
  - Discuss how hardware and software device configuration should be examined for possible fixes.

- **EXAMINE COMMON SUPPORT PROBLEMS (SLO #04).**
  - Define the term bug and describe the ways in which software vendors repair bugs and add new features using patches, updates, service packs, releases, new versions, and upgrades. Describe how release numbers are used to label software versions.
  - Explain that performance problems result from poor interaction between hardware and software.
  - Describe the types of misunderstandings that may cause users to perceive that there is a computer problem.

- **DESCRIBE THE FUNCTION OF A HELP DESK (SLO #05).**
  - Define the term incident management and the more specific term call management.
  - Discuss the importance of making sure the user is qualified to receive support.
  - Describe the manner in which a support agent assigns a priority code to an incident. Explain that the priority code determines the position of the incident in the incident queue.
  - Review the factors that may cause job stress for support workers.
  - Describe the importance of the managerial role to help desk support staff.

- **DEVELOP AND IMPLEMENT TYPICAL PRODUCT SUPPORT STANDARDS (SLO #06).**
  - Examine the resources that can be used to help make product evaluation decisions.
  - Review the criteria for choosing to upgrade to a newly released product or service.
Discuss the balance between allowing users freedom to choose the best software and hardware for their specific purposes and providing support services for a diverse base of different products.

MEASURE A USER’S NEEDS (SLO #07).

Define the problem clearly.

Identify the roles of stakeholders.

Identify sources of information.

Develop an understanding of the existing system.

Investigate alternatives to the existing system.

Develop a model of the proposed solution.

DEMONSTRATE HOW TO INSTALL AND MANAGE END-USER COMPUTERS (SLO #08).

Review pre-installation site preparation tasks.

Discuss the purpose and contents of a site management notebook.

Define the steps to install and configure hardware, operating systems, networks, and application software.

Analyze ongoing site management tasks.

REVIEW HOW TO TRAIN END-USERS (SLO #09)

Identify the four steps in the training process: planning, preparation, presentation, and progression.

---

Computer Information Science - Programming (CISP)

CISP 300 Algorithm Design/Problem Solving

**Units:** 3
**Hours:** 54 hours LEC
**Prerequisite:** MATH 120 with a grade of "C" or better, or placement through the assessment process.
**Transferable:** CSU; UC
**General Education:** AA/AS Area II(b)
**Catalog Data:** June 1, 2020

This course covers the foundational concepts of computer languages such as C++, SQL, Visual Basic, JavaScript, PHP, and C#. Students will learn what lies underneath desktop, web, mobile, and database applications. Students may petition for GE Area B5 credit after transfer to CSUS.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1: MANAGE DATA INVOLVED IN AN ALGORITHM**
  - Recognize the valid values that can be stored as integer, real, string, and boolean data.
  - Declare variables of the appropriate data type with the smallest scope necessary for the algorithm.
  - Decide whether to represent data as variables, constants, or literals in an algorithm.
  - Combine two values of the same type into a single value using arithmetic operators such as + or MOD, comparison operators such as !=, and logical operators such as AND.
  - Design statements to get input data from keyboard entry and/or from a text file and store this data into typed variables.
  - Design statements to send output data from variables to a monitor and/or to a text file.
  - Group logically related data of the same type into an indexed array.
- **SLO #2: DESIGN A LOGICALLY AND SYNTACTICALLY CORRECT SEQUENCE OF INSTRUCTIONS TO INPUT DATA, CALCULATE ANSWER(S) FROM INPUT DATA, AND OUTPUT ANSWER(S).**
  - Change the value of variables and constants using assignment statements. Write a function call using an assignment statement.
• Combine two numeric values using arithmetic operators and library math functions. Compare the results of integer and real number division.

• Write pseudocode statements in the correct order to accomplish a task.

• SLO #3: DESIGN DECISION LOGIC STATEMENTS (IFS AND LOOPS) TO CONDITIONALLY EXECUTE PORTIONS OF AN ALGORITHM

• Create Boolean expressions with two same typed values and comparison operators. Combine two or more Boolean expressions using logical operators AND and OR into appropriate logic for an algorithm.

• Identify when to use relational (If) logic in an algorithm. Write appropriate If-Then, If-Then-Else, If-Then-ElseIf-Then-Else statements and nested If statements as required for an algorithm.

• Identify when to use repetition loop logic in an algorithm. Write appropriate While, Do-While, Do-Until, For statements and nested loops as required for an algorithm.

• Design repetition or relational statements to perform validation on input data.

• SLO #4: MODULARIZE AN ALGORITHM INTO SEPARATE SECTIONS

• Write a primary or main module to prompt for and accept input data, calculate a result from this data, and output the result. Any or all of these steps may be performed by separate modules/functions.

• Write module and function calls with the correct number and type of arguments as defined by the module/function header.

• Compare and contrast calls to a module and a function, including the way that returned data is accepted.

• Design modules and functions that use value parameters, reference parameters, local variables, and global constants to perform their task.

• SLO #5: EXPLORE SIMPLE DATA STRUCTURE ALGORITHMS

• Implement bubble, selection, and insertion sorts to organize arrays. Implement binary search to find a particular value within a sorted array.

• Create algorithms to manipulate strings character-by-character using if and loop logic and library functions.

CISP 310 Assembly Language Programming for Microcomputers

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISP 360 with a grade of “C” or better
Transferable: CSU; UC
C-ID: C-ID COMP 142
Catalog Date: June 1, 2020

This course is an introduction to computer architecture using assembly language programs. Topics include: binary representation of data and instructions, memory addressing modes, subroutines and macros, operating system interrupts, processor architecture, and interfacing with high level languages.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO 1: RECOGNIZE THE COMPUTER ARCHITECTURE ISSUES NEEDED TO WRITE ASSEMBLY LANGUAGE CODE.

• Analyze the architecture of a processor and the organization of its memory by discussing such topics as registers, clock speed, busses, and addressing modes.

• SLO 2: COMPARE AND CONTRAST THE BINARY REPRESENTATION OF DATA AND ASSEMBLY LANGUAGE INSTRUCTIONS.

• Analyze the binary representation of data using contextual clues to translate the data into characters, positive or negative integers, positive or negative fractional numbers, or machine instructions.

• Correlate integer values in different bases (e.g. binary, octal, decimal, and hexadecimal).

• Correlate the external (monitor) string representation of numbers and their internal (memory) binary format.

• SLO 3: CREATE ASSEMBLY LANGUAGE PROGRAMS THAT ACCEPT INPUT, PERFORM CALCULATIONS AND MAKE DECISIONS BASED ON THE INPUT, AND DISPLAY AN ANSWER.

• Solve memory access problems by using the addressing modes supported by the processor.
- Solve bit-level problems using AND, OR, NOT, XOR and bit-shifting instructions on binary values.
- Solve simple calculation issues using arithmetic instructions.
- Solve keyboard input and display monitor output problems using operating system interrupt calls.
- Differentiate between the temporary storage of the stack and named memory locations (variables).
- Compare and contrast subroutines and macros to organize assembly language statements. Create subroutines and macros, both internal and external to the main body of the program.
- Understand the role of the stack and the instruction pointer register in subroutine execution.

**SLO 4:** EXPLAIN THE ROLES OF SOFTWARE IN THE CREATION, BUILDING, AND DEBUGGING OF EXECUTABLE FILES USING ASSEMBLY LANGUAGE.

- Coordinate the use of text editors, compilers, linkers, and debuggers during the creation of assembly language programs.
- Analyze the memory space (RAM and registers) of an executing program with a debugging tool to trace the execution and determine the correctness of the execution.
- Explain how memory is allocated for a program during the compilation process.

---

**CISP 350 Database Programming**

**Units:** 3  
**Hours:** 54 hours LEC

**Prerequisites:** CISA 320 with a grade of "C" or better; and three units in any programming language.  
**Transferable:** CSU; UC

**General Education:** AA/AS Area II(b)  
**Catalog Date:** June 1, 2020

This is an introductory course in programming databases. Topics include analysis and design, modular programming, screen displays and menus, and multiple databases.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- IDENTIFY THE PURPOSE OF COMMON DATABASE LANGUAGES (SLO# 1)
- Write, develop and synthesize programs in one of the common database languages.
- Describe the fundamentals of SQL programming language.
- Analyze, comprehend problems for computer applications, as evidenced through program documentation.
- Explain how SQL programming language is used to extract data from the database.
- Assess and utilize common SQL query constructs.
- Distinguish between Data Definition Language (DDL) and Data Manipulation Language (DML).
- List common structure of a database query using SQL.
- Utilize SQL select statements for sorting and grouping data from the database.
- DEVELOP REPORTS TO DISPLAY DATA EXTRACTED FROM THE DATABASE (SLO# 2)
- Design and produce small databases, screen displays.
- Organize data to generate reports based on data in the database that conform to user requests.
- DESCRIBE THE FUNCTION OF VARIOUS JOINS (SLO# 3)
- Utilize the fundamental vocabulary and constructs of SQL to perform joins on tables in the database.
- Outline the various types of table joins.
- Distinguish among outer and inner joins.
- ANALYZE AND DEVELOP PL/SQL SCRIPTS (SLO # 4)
- Create PL/SQL as a programming tool to enable automation of multiple database interaction tasks.
• Develop PL/SQL scripts to meet programming specifications.
• Develop, write, assess and evaluate triggers.
• Analyze PL/SQL script algorithms to achieve desired output.

CISP 351 Introduction to Relational Database Design and SQL

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed to introduce relational database technology, normalization, entity relationships, logical model design, and ISO-ANSI standard Structured Query Language (SQL). Topics covered include: database design, basic properties of a relational database such as relations, tables, primary keys, foreign keys and principles of normalization, simple SQL select statements, sorting and grouping data, joining tables, subqueries and views. The course covers core concepts in identifying data and information management requirements for organizations, data modeling, and normalization techniques. The database design section focuses on logical model design and entity relationship (ER) modeling. The course exposes students to the use of Relational Database Management Systems using an industrial-strength database management system. Students will leave the course with a good working knowledge of database technology.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO# 1: Demonstrate an understanding of basic Relational Database Management System terminology
• Define, compare and contrast database design and tradeoff methodologies, Relational Database Management Systems
• Develop and utilize the fundamental vocabulary and constructs of the SQL
• SLO# 2: Define and understand the concept of joins, sorting and grouping data, joining tables, subqueries and views.
• Construct and implement easy to medium difficulty queries in SQL
• create database objects using Data Definition Language.
• SLO# 3: construct subqueries, and joins using Data Query Language.
• demonstrate an understanding of transaction control statements in SQL
• SLO# 4: Demonstrate a basic understanding of logical model design and entity relationship (ER) modeling.
• Explain normalization and entity-relationships in table design

CISP 352 Intermediate SQL

Units: 3
Hours: 54 hours LEC
Prerequisite: CISP 351
Advisory: CSU
Transferable: CSU
Catalog Date: June 1, 2020

This course builds upon the Introduction to Relational Databases and SQL course with more in-depth SQL constructs common to most commercial database products and extensions to the SQL language. Topics include: complex joins including inner and outer joins, correlated subqueries, complex table definition, table and column constraints, Union, Intersection, Minus, triggers, procedures and packages.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO# 1: Design, implement, and demonstrate an understanding of SQL constructs to include data definition language, data manipulation language, and data query language
CISP 353 Application Development in a Client Server Environment

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Design and develop robust Graphical User Interfaces (GUIs).
  - Choose input and output controls to place on the GUI that allow clear communication between the program and the end user, as defined by the current version of Visual Basic.
  - Design GUI behavior to limit user options with the techniques of hiding or disabling controls based on the previous user actions.
  - Ensure that positive user action is required to display the output for each new set of inputs, utilizing the specific technique that depend on the abilities of the current version of Visual Basic.
  - Use common VB.NET Windows controls effectively in an application (for example, TextBox, CheckBox, RadioButton, Label, PictureBox, GroupBox, ListBox, and ComboBox.

- SLO #2: Install a GUI application on a client workstation.
  - Choose input and output controls to place on the GUI that allow clear communication between the program, the end user and the underlying database.
  - Design GUI behavior to limit user options with the techniques of hiding or disabling controls based on the previous user actions.
  - Ensure that positive user action is required to display the output for each new set of inputs.

- SLO #3: Use software to establish connection to database server.
  - Access remote and local data on a database server.

- SLO #4: Develop and implement input data validation.
  - Implement logic that ensures that input data is valid before using the data.
  - Demonstrate the process to hide or disable controls on the GUI and alert the user of an input error for invalid input data.
  - Construct methods to identify user input errors.

- SLO #5: Construct MDI applications with menus.
  - Organize related clickable operations into a pull-down or pop-up menu.
  - Design GUI behavior to perform advanced processing options with the techniques of selecting data from the database based on user input.
  - Construct an application that allows users to input select criteria to be passed as parameters to queries.
CISP 354 Introduction to Relational Database Administration

This course is designed to introduce students to administering a relational database management system. Topics include: managing users, privileges, resources, and tablespaces; creating an operational database, managing database files; how to start up and shut down an instance or database, the data dictionary, transaction processing, and backup and recovery issues. Completion will provide students with sufficient knowledge for an entry level Database Administration position in industry.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DESCRIBE NORMALIZATION OF DATA IN A DATABASE (SLO #01).
- Evaluate database model for conformance to various normal forms.
- Audit the normalization process to the third normal form.
- Convert database model between 1st, 2nd, and 3rd normal forms.
- SUMMARIZE THE MECHANISMS USED TO INSTALL A RELATIONAL DATABASE MANAGEMENT SYSTEM (SLO #02).
- Classify, install, incorporate, prepare and manage a Relational Database Management System (RDBMS) installation.
- Demonstrate, simulate outline and sketch start up and shut down of a database.
- LIST THE TOOLS USED TO MONITOR THE DATABASE FOR TYPICAL USER CONFIGURATION (SLO #03).
- Prepare, tabulate, employ and compile typical configurations of client workstations to access the RDBMS.
- Document common configurations to be deployed across workstations to enable access to the RDBMS.
- Differentiate between user and administration configurations of the RDBMS.
- IDENTIFY HOW TO MANAGE USERS WITH ACCESS TO THE RDBMS (SLO #04).
- Validate and demonstrate ability to create, modify and remove users, groups and roles.
- Evaluate existing user roles and manager user permissions.
- DESCRIBE THE TYPES OF BACKUP METHODOLOGIES USED TO BACKUP DATA IN THE DATABASE (SLO #05).
- Formulate, draft and incorporate database backup and recovery procedures.
- Document database backup plan for review.
- SUMMARIZE MECHANISMS USED TO MAKE USER ACCESS TO THE DATABASE CONTINUOUSLY AVAILABLE (SLO #06).
- Define, Plan, audit and critique system documentation.
- Generate user help documentation for ease of access to the RDBMS and user accounts.
- Create user FAQ to provide user self-help guide.

CISP 356 Relational Database Design and Information Retrieval

This course is designed to serve as an advanced-level course within the Database Design certificate. The course covers advanced database concepts. Topics include: data analysis, principle data models with emphasis on the relational model, entity-relationship diagrams, logical design, data administration and normalization.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO#1: assess and utilize knowledge of the scientific method in database design.
- compare and contrast the scientific method to other ways of information retrieval.
- evaluate and report the various advantages and disadvantages.
- SLO#2: evaluate the various relational database design approaches.
- analyze and describe the major paradigms within database architectures.
- apply and synthesize knowledge of concepts, theory, and research findings surveyed within the following sub-disciplines in database modeling: Semantic object modeling, object oriented modeling, entity relationship diagrams, data normalization, network and hierarchical architectures.
- SLO#3: infer and sketch trends within the field.
- develop and evaluate information retrieval and presentation techniques including SQL, form and report generation.
- adapt and extrapolate the database modeling and information retrieval processes and its connection to other fields.
- SLO#4: critique, analyze and demonstrate tradeoffs in relational database design methodologies

CISP 360 Introduction to Structured Programming

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE AN UNDERSTANDING OF STRUCTURED PROGRAMMING CONCEPTS
  - Write clear and complete comments to describe the logic of an algorithm that has been translated into a set of structured programming instructions.
  - Create programs that accept input from either the keyboard or a file and to send output to a file or the monitor.
  - Organize conditional and repeated algorithm steps into conditional (if) and looping control statements.
  - Organize program instructions into logically separate procedures. Each procedure will communicate with other procedures through argument lists.
  - Write instructions to store data temporarily (in variables, constants, or arrays) or permanently (in files).
  - Select an appropriate data type (integer, floating point, character, string, boolean, etc.) to temporarily store intermediate results.
  - Compare the advantages and disadvantages of using local, procedure, and global scope for variables. Select the appropriate variable scope for assigned programs.
  - Compare and contrast the use of arrays and structures. Select the appropriate one for assigned programs.
  - Dynamically allocate and access memory using a language concept such as pointers.
- SLO 2: DISCUSS AT AN INTRODUCTORY LEVEL THE USE OF CLASSES AND OBJECTS IN A PROGRAM
  - Compare the use of objects to store data with the use of non-object variables or arrays or structures.
  - Recognize the format of a class definition and the relationship between a class and objects that are based on that class.
SLO 3: USE DEBUGGING SOFTWARE TO TEST PROGRAMS FOR CORRECT EXECUTION

Test completed programs for correct execution using a set of possible input values. Debugger software will be used to view intermediate results for input values that lead to incorrect results.

Find existing procedure libraries and include these in programs to take advantage of pre-defined language capabilities such as keyboard input and monitor output.

CISP 370 Beginning Visual Basic

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: CISC 310 or CISP 300
Transferable: CSU; UC
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course covers development of Windows-based desktop applications using VB.NET. Topics include best practices for GUI design, use of the Visual Studio .NET development software, organizing code into procedures and modules, calculation techniques, input data validation, file I/O, variable scope, arrays, multiple-window applications, and class development. This course is designed for students who want a strong foundation in building GUI applications and transfer MIS majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Design and develop robust Graphical User Interfaces (GUIs).
  - Choose input and output controls to place on the GUI that allow clear communication between the program and the end user.
  - Design GUI behavior to limit user options with the techniques of hiding or disabling controls based on the previous user actions.
  - Ensure that positive user action is required to display the output for each new set of inputs.
  - Use common VB.NET Windows controls effectively in an application. Examples are the TextBox, CheckBox, RadioButton, Label, PictureBox, GroupBox, ListBox, and ComboBox.
- SLO #2: Implement programming logic using Visual Basic procedures.
  - Implement logic within event handler procedures to respond to user actions on the GUI such as clicking, scrolling over, and tabbing.
  - Demonstrate understanding of the use of by-reference and by-value parameters in procedures.
  - Use pre-existing procedures such as Val() and IsNumeric() to simplify a program.
- SLO #3: Develop and implement input data validation.
  - Implement logic that ensures that input data is valid before using the data.
  - Hide or disable controls on the GUI and alert the user of an input error for invalid input data.
- SLO #4: Develop and implement data storage strategies.
  - Create variables of the appropriate type and scope for temporary storage of data.
  - Write to a text file to permanently store data.
  - Read input data from a text file.
- SLO #5: Group related data and procedures together.
  - Temporarily store related constants in a construct such as an enumeration.
  - Temporarily store related data in one-dimensional and two-dimensional arrays.
  - Organize functionally related controls in a “grouping” control such as a GroupBox.
  - Organize a block of code that performs a single task into a custom procedure. If the task is calculation of a single value, use a function. For all other tasks, use a subroutine.
  - Organize related clickable operations into a pull-down or pop-up menu.
  - Recognize a class as a grouping of functionally related variables and procedures.
• SLO #6: Use the Integrated Development Environment (IDE) to build, compile, execute, and debug Visual Basic applications.

• Create a Windows Application project.

• Uncover answers to syntax questions using the Help utility of the IDE.

CISP 400 Object Oriented Programming with C++

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISP 360 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area II(b)
C-ID: C-ID COMP 122
Catalog Date: June 1, 2020

This course is an intermediate C++ course designed to further enhance the students’ abilities to design and develop object-oriented programs. Included is an emphasis in higher level programming skills development. Detailed information into class design and implementation, function templates, dynamic data allocation, pointers, strings, arrays, control structures, operator overloading, inheritance, virtual functions, polymorphism, data stream input and output, exception handling and file processing. (C-ID COMP 122)

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: DEMONSTRATE AN UNDERSTANDING OF C++ OBJECT ORIENTED PROGRAMMING (OOP) CONCEPTS.
  understand and recall an intermediate-level of OOP terminology, such as inheritance, composition, and polymorphism.
  compare and contrast C and C++ languages and understand and know how to use the existing classes and functions.

• SLO # 2: APPLY THE LEARNED CONCEPTS TO CREATE EFFECTIVE AND EFFICIENT PRODUCTION C++ PROGRAMS.
  Design and implement higher level programming interfaces through the use of abstract data type (ADT) and create new classes.
  Design and implement intermediate level programming assignments by using operator overloading, templates, exception handling, file processing, pointers and strings.

• SLO # 3: USE WINDOWS DEBUGGING SOFTWARE TO TEST PROGRAMS FOR CORRECT EXECUTIONS.
  Work with non-text files and design programs in a graphic user interface compiler.

• SLO # 4: COMMUNICATE, SUPPORT, ANALYZE AND ADAPT DIFFERENT LOGIC AND PROGRAMS.
  Work effectively as part of a project team.

CISP 401 Object Oriented Programming with Java

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISP 360 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is an introduction to object oriented programming using the Java language. The student will learn the Java programming language as well as the Java compiler. Topics will include: creating Java applications, writing Java applets, using the control statements, creating Java methods, declaring Java arrays, object-based programming, object-oriented programming: inheritance and polymorphism, handling strings and characters, controlling graphics by using graphics and Java 2D, generating graphics by using graphical user interface components, exception handling, multithreading, and managing files and streams handling.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: DISCOVER AND UNDERSTAND THE OBJECT ORIENTED JAVA PROGRAMMING CONCEPTS, KNOWLEDGE AND POTENTIALS.
  Understand the Java software development “Process and Object Oriented Methodology” (such as Inheritance, Polymorphism, Abstract Classes, and Interfaces).
- Comprehend the Java Applications, Applets, multithreading and GUI Components creations.
- Demonstrate knowledge in Strings Handling, Function Overloading, and Arithmetic Operations of Java language.
- Describe the Data and Files process, Input / Output Control and exception handling.
- SLO # 2: APPLY THE LEARNED JAVA KNOWLEDGE TO CREATE EFFECTIVE AND EFFICIENT PRODUCTION JAVA PROGRAMS USED IN COMPUTERS AND WEB SITES.
- Solve a program question by using Java language.
- SLO # 3: USE JAVA INTERGRATED DEVELOPMENT ENVIRONMENT DEBUGGING SOFTWARE TO TEST PROGRAMS FOR CORRECT EXECUTIONS.
- Work in a Java IDE.
- SLO # 4: COMMUNICATE, SUPPORT, ANALYZE AND ADAPT DIFFERENT LOGIC AND JAVA PROGRAMING SKILL LEVELS WITH PROJECT TEAM MEMBERS.
- Work effectively in a team project environment.

CISP 402 Java - Data Handling

This course is an intermediate JAVA class. The student will enhance their knowledge in Java Application Program Interface (API) and programming skills. Topics will include Files and Streams, Networking, Multimedia (Images, Animation and Audio), Data Structures, Java Utilities Package and Bit Manipulation, Collections, Java Database Connectivity with JDBC™, Servlets and JavaServer Pages (JSP).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: EMPLOY JAVA TO CREATE HIGHER LEVEL PROGRAMS.
  - Use Java to design a complete graphic user interface.
  - Implement a data structure by using JAVA API (such as Stack, Collections, Queues, Utilities Package, etc).
- SLO #2: CONSTRUCT DATABASE AND INFORMATION SHARING ENVIRONMENTS.
  - Compose a networking connection program and be able to share information in the environment.
  - Construct Java Database Connectivity with JDBC™.
- SLO #3: SUPPORT ANIMATION, AUDIO, VIDEO, TEXT, AND DIFFERENT DATA TYPES OF DATABASES FOR WEB ACCESS.
  - Access existing system by using Servlets.
  - Create web dynamic contents by using the JSP.
  - Create a multimedia environment and access files and information in the Internet and World Wide Web.

CISP 405 Object Oriented Programming using C# on Visual Studio .NET

This course is an introduction to C# object-oriented programming language in a Visual Studio environment. Topics will include Visual Studio IDE, Constructors, Methods, Arrays, Inheritance, Polymorphism, Exception Handling, GUI, and Multithreading. This course is designed for students to understand the web-based as well as system development capabilities of C#.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1**: DISCOVER AND UNDERSTAND THE OBJECT ORIENTED C# PROGRAMMING CONCEPTS, KNOWLEDGE AND POTENTIALS.
  - Define and show how to use any or all of the following: control structures, methods, array, abstract data type, constructors, and data abstraction and information hiding.
  - Implement graphic user interface, multithreading, and object oriented programming using C# program.
- **SLO #2**: APPLY THE LEARNED C# KNOWLEDGE TO CREATE EFFECTIVE AND EFFICIENT PRODUCTION C# PROGRAMS USED IN COMPUTERS AND WEB SITES.
  - Develop system and web page applications.
- **SLO #3**: USE MICROSOFT .NET INTEGRATED DEBUGGING SOFTWARES TO TEST PROGRAMS FOR CORRECT EXECUTIONS.
  - Demonstrate proficiency in using Visual Studio .NET integrated development environment.

CISP 430 Data Structures

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | CISP 400 or CISP 401 with a grade of "C" or better or an equivalent level programming course in the programming language used in this course |
| Transferable: | CSU; UC |
| C-ID: | C-ID COMP 132 |
| Catalog Date: | June 1, 2020 |

This course applies a case study approach which incorporates techniques for systematic problem analysis, program specification, design, coding, testing, debugging and documentation of large programs. Data structures include stacks, queues, trees, lists, etc. Advanced language features related to strings, non-text files, pointers, recursion, and object-oriented programming methodology are covered. Searching and sorting techniques are discussed. Consult the class schedule for specific topics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1**: ANALYZE PROGRAMMING PROBLEMS AND DETERMINE WHAT OBJECT ORIENTED PROGRAMMING APPROACHES AND TOOLS WOULD BE MOST APPROPRIATE TO DEVELOP PROGRAMS TO RESOLVE THEM.
  - Utilize OOP methodology to create program solutions.
- **SLO #2**: UNDERSTAND STORING, SORTING, AND SEARCHING TECHNIQUES ON DATA STRUCTURES.
  - Implement dynamic data structures and determine which is appropriate for a given problem.
- **SLO #3**: COMMUNICATE, SUPPORT, ANALYZE AND ADAPT DIFFERENT LOGIC AND PROGRAMMING SKILL LEVELS WITH PROJECT TEAM MEMBERS.
  - Work effectively as part of a project team.

CISP 440 Discrete Structures for Computer Science

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | MATH 370 with a grade of "C" or better |
| Corequisite: | CISP 430 |
| Transferable: | CSU; UC |
| C-ID: | C-ID COMP 152 |
| Catalog Date: | June 1, 2020 |

This course is an introduction to the discrete structures used in Computer Science with an emphasis on their applications. Topics covered include: counting methods, elementary formal logic and set theory, recursive programming and algorithm analysis, digital logic and combinational circuits, regular expressions, and finite state automata.
Upon completion of this course, the student will be able to:

- Validate logical arguments within the context of computer computations. (SLO 1)
- Design and analyze simple digital circuits that mimic logical arguments.
- Construct mathematically rigorous proofs of statements involving integers and sets (such as collections of characters or strings). The proofs will include induction and by contradiction forms.
- Model simple computation using finite state automata and regular languages. (SLO 2)
- Compose a valid expression from a given regular language.
- Construct a valid recognizer from a given regular language.
- Develop and analyze patterns related to programs. (SLO 3)
- Translate floating-point and signed integer numbers into IEEE binary format.
- Construct a recursive algorithm to solve a word problem.
- Exposure to the foundational mathematics behind computing. (SLO 4)
- Recognize the mathematical definitions of, and differences between, relations and functions.
- Recognize the definition of sets and basic operations on sets.
- Recognize and use counting techniques such as the pigeonhole principle and permutations and combinations.

Computer Information Science - Security (CISS)

CISS 300 Introduction to Information Systems Security

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** None.  
**Advisory:** Some experience and/or coursework in networking.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is intended for beginner users who want to increase their understanding of information security issues and practices. It is intended for end users who use computers at home or in the office. The course covers all of the need-to-know information about staying secure, including up-to-date information on relevant topics such as protecting mobile devices and wireless local area networks. Students will learn how to maintain a secure environment and avoid security attacks through a series of real-life user experiences, hands-on projects, and case projects.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **ANALYZE FUNDAMENTAL SECURITY CONCEPTS (SLO #01).**  
  - Describe the challenges of securing information and define information security and explain why it is important.  
  - Identify the types of attackers that are common today.  
  - List the basic steps of an attack.

- **APPLY SOUND PERSONAL SECURITY PRINCIPALS (SLO #02).**  
  - Describe personal security defenses.  
  - Describe the attacks against passwords.  
  - Describe identity theft and the risks of using social networking.  
  - IDENTIFY THE NEEDS FOR A SECURE COMPUTER (SLO #03).  
  - List and describe the different types of attacks on computers.
CISS 310 Network Security Fundamentals

- Explain how to manage patches.
- Describe how to install and use antivirus software.
- Describe how to recover from an attack.
- CONFIGURE A STRATEGY TO FIGHT AGAINST INTERNET-BASED ATTACKS (SLO #05).
- Explain how the Internet and e-mail work.
- Describe how attackers can use mobile code, cookies, and fraudulent digital certificates.
- List the security risks with using e-mail.
- FORMULATE PROVEN SECURITY PRACTICES AT THE WORKPLACE (SLO #06).
- Define physical access and list the tools used to restrict it.
- Describe how tokens and cards can be used for security.
- Explain what a security policy is and list several different policies.
- Define technology and procedural access control.
- List the steps to be taken to prepare for a crisis.

This course is an introduction to the fundamental principles and topics of Information Technology security and Risk Management at the organizational level. It also addresses hardware, software, processes, communications, applications, and policies and procedures with respect to cyber-security. In addition, this course prepares students for the CompTIA Security+ certification exam.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- ANALYZE FUNDAMENTAL SECURITY CONCEPTS (SLO #01).
  - Describe the fundamental principles of information systems security.
  - Define the concepts of threat, evaluation of assets, information assets, physical, operational, and information security and how they are related.
  - Evaluate the need for the careful design of a secure organizational information infrastructure.
  - Explain the need for a comprehensive security model and its implications for the security manager or Chief Security Officer (CSO).
  - Explain the different types of information security careers and how the Security+ certification can enhance a security career.
- DESCRIBE POTENTIAL SYSTEM ATTACKS AND THE ACTORS THAT MIGHT PERFORM THEM (SLO #02).
  - Describe the different types of software-based attacks
  - List types of hardware attacks.
  - Define virtualization and explain how attackers are targeting virtual systems.
- ANALYZE WAYS TO HARDEN AN OPERATING SYSTEM (SLO #03).
  - Describe various software security applications.
  - Explain how to protect systems from communications-based attacks.
  - List ways to prevent attacks through a Web browser.
  - Explain how to harden operating systems.
• EXAMINE SOME OF THE MAJOR WEAKNESSES THAT ARE FOUND IN NETWORK SYSTEMS AND WAYS TO PREVENT THEM (SLO #04).
• Explain the types of network vulnerabilities.
• Define different methods of network attacks.
• List the different types of network security devices and explain how they can be used.
• Define network address translation and network access control.
• Explain how to enhance security through network design.
• INVESTIGATE THE BASIC WIRELESS SECURITY PROTECTIONS AVAILABLE TO THEM (SLO #05).
• Describe the basic IEEE 802 wireless security protections.
• Define the vulnerabilities of open system authentication, WEP, and device authentication. Describe the WPA and WPA2 personal security models.
• Explain how enterprises can implement wireless security.
• INVESTIGATE LOGICAL AND PHYSICAL ACCESS CONTROL METHODS (SLO #06).
• Define access control and list the four access control models.
• Describe logical access control methods.
• Explain the different types of physical access control.
• EXAMINE AUTHENTICATION AND UNDERSTAND HOW IT FITS INTO ACCESS CONTROL (SLO #07).
• Define authentication. Describe the different types of authentication credentials.
• List and explain the authentication models.
• Define basic cryptography, its implementation considerations, and key management.
• DEFINE RISK AND RISK MANAGEMENT (SLO #08).
• Perform risk analysis and risk management.
• Describe the components of risk management.
• Apply risk management techniques to manage risk, reduce vulnerabilities, threats, and apply appropriate safeguards/controls.
• Describe how usage audits can protect security.
• List the methodologies used for monitoring to detect security-related anomalies.
• EXAMINE HOW TO PROTECT DATA USING THREE COMMON TYPES OF ENCRYPTION ALGORITHMS: HASHING, SYMMETRIC ENCRYPTION, AND ASYMMETRIC ENCRYPTION (SLO #09).
• Define cryptography and hashing.
• List the basic symmetric cryptographic algorithms.
• Describe how asymmetric cryptography works.
• List types of file and file system cryptography. Explain how whole disk encryption works.
• Define digital certificates. List the various types of digital certificates and how they are used.
• Describe the components of Public Key Infrastructure (PKI).
• FORMULATE REDUNDANCY PLANS AND SECURITY POLICIES (SLO #10).
• Describe the components of redundancy planning. Describe appropriate measures to be taken should a system compromise occur.
This course equips students with the knowledge and skills needed by today's organizations that are challenged with rapidly detecting cybersecurity breaches and effectively responding to security incidents. The student would be part of a team of people in Security Operations Centers (SOC's) keeping a vigilant eye on security systems, protecting their organizations by detecting and responding to cybersecurity threats. Cisco Certified Network Associate (CCNA) CyberOPS prepares candidates to begin a career working with associate-level cybersecurity analysts within security operations centers.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- IMPLEMENT AND MANAGE CISCO SECURE NETWORKS (SLO 1)
  - Secure network devices
  - Configure Authentication, Authorization and Accounting (AAA)
- IMPLEMENT NETWORK PERIMETER DEFENSE (SLO 2)
  - Implement firewall technologies
- ANALYZE THREATS AND VULNERABILITIES TO NETWORKS (SLO 3)
  - Implement intrusion prevention
  - Implement Virtual Private Networks (VPNs)

**CISS 320 Implementing Network Security and Counter Measures**

This course introduces students to Intrusion Detection. It also covers such essential practices as developing a security policy and then implementing that policy by performing Network Address Translation; setting up packet filtering; and installing proxy servers; firewalls; and virtual private networks. Finally, this course includes many hands-on activities or labs along with realistic case studies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- IDENTIFY NETWORK SECURITY FUNDAMENTALS (SLO #01).
  - Describe potential system attacks and the actors that might perform them.
  - Describe the threats to network security.
  - Apply cyber defense methods to prepare a system to repel attacks.
  - Describe appropriate measures to be taken should a system compromise occur.
- EXPLORE DIFFERENT APPROACHES TO RISK ANALYSIS (SLO #02).
  - Explain the fundamental concepts of risk analysis.
  - Describe cyber defense tools, methods and components.
  - Explain the process of risk analysis.
  - FORMULATE A SECURITY POLICY AND IDENTIFY SECURITY POLICY CATEGORIES (SLO #03).
  - Explain best practices in security policies.
  - Formulate a security policy and identify security policy categories.
- Explain the importance of ongoing risk analysis and define incident-handling procedures.
- IDENTIFY SUSPICIOUS TRAFFIC AND EVENTS (SLO #04).
- Describe the concepts of signature analysis.
- Detect normal and suspicious traffic signatures.
- Identify suspicious events.
- Explain the Common Vulnerabilities and Exposures (CVE) standard.
- SUMMARIZE THE ADVANTAGES AND DISADVANTAGES OF VIRTUAL PRIVATE NETWORKS (VPN) (SLO #05).
- Explain basic VPN concepts.
- Describe encapsulation, encryption and authentication in VPNs.
- Explain design considerations for a VPN.
- Explain how to set up VPNs with firewalls.
- Explain how to adjust packet-filtering rules for VPNs.
- IDENTIFY HOW TO USE AN INTRUSION DETECTION SYSTEM PROPERLY (SLO #06).
- Explain the steps of intrusion detection.
- Describe options for implementing intrusion detection systems.
- Evaluate different types of IDS products.
- Explain the six-step incident response process.
- Describe how to respond to false alarms to reduce re-occurrences.
- Explain options for dealing with legitimate security alerts.
- EXPLAIN HOW TO STRENGTHEN DEFENSE THROUGH ONGOING MANAGEMENT (SLO #07).
- Strengthen network control by managing security events.
- Improve analysis by auditing network security procedures.
- Strengthen detection by managing an intrusion detection system.
- Improve network defense by changing a defense in depth configuration.
- Increase their knowledge base by keeping on top of industry trends.
- EXPLAIN COMMON APPROACHES TO PACKET FILTERING AND RECITE HOW TO ESTABLISH A SET OF RULES AND RESTRICTIONS FOR A FIREWALL (SLO #08).
- Explain what firewalls can and cannot do.
- Describe common approaches to packet filtering.
- Establish a set of rules and restrictions for a firewall.
- Design common firewall configurations.
- Compare hardware and software firewalls.

Units: 3.5
Hours: 54 hours LEC; 27 hours LAB
Prerequisites: None.
Advisory: CISN 304 and 341 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020
This course provides the theoretical understanding of network security and the hands-on skills to implement and support network security. Topics include Cisco switch and router security, Authentication, Authorization, and Accounting (AAA), Access Control Lists (ACLs), Firewalls, Intrusion Prevention System (IPS), and Virtual Private Networks (VPNs). Additionally, the Cisco Adaptive Security Appliance (ASA) and Adaptive Security Device Manager (ASDM) are covered. This course prepares students for CISCO’s Cisco Certified Network Associate (CCNA) Security certification exam.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **IMPLEMENT AND MANAGE CISCO SECURE NETWORKS (SLO 1)**
  - Describe security threats facing modern network infrastructures.
  - Configure Cisco routers and switches for security.

- **IMPLEMENT NETWORK PERIMETER DEFENSE (SLO 2)**
  - Describe methods for implementing secure communications to ensure integrity, authenticity, and confidentiality.
  - Explain how IPsec VPNs operate.
  - Test network security and create a technical security policy.

- **ANALYZE THREATS AND VULNERABILITIES TO NETWORKS (SLO 3)**
  - Configure security via CCP and Cisco IOS CLI

CISS 330 Implementing Internet Security and Firewalls

**Units:** 3  
**Hours:** 48 hours LEC; 18 hours LAB  
**Prerequisite:** CISS 310 with a grade of “C” or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

With the increased connectivity to the Internet and the wide availability of automated cracking tools, organizations can no longer simply rely on operating system security to protect their valuable corporate data. The firewall has emerged as a primary tool used to prevent unauthorized access. Students will learn how to allow access to key services while maintaining your organization’s security, as well as how to implement firewall-to-firewall Virtual Private Networks (VPNs).

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- **EXPLAIN THE RELATIONSHIP AMONG THE DIFFERENT ASPECTS OF INFORMATION SECURITY, ESPECIALLY NETWORK SECURITY (SLO #01).**
  - Define the key terms and critical concepts of information and network security.
  - Identify the threats posed to information and network security, as well as the common attacks associated with those threats.
  - Differentiate threats to information within systems from attacks against information within systems.

- **DESCRIBE THE BASIC ELEMENTS OF COMPUTER-BASED DATA COMMUNICATION (SLO #02).**
  - Know the key entities and organizations behind current networking standards, as well as the purpose of and intent behind the more widely used standards.
  - Explain the nature and intent of the OSI reference model, and list and describe each of the model’s seven layers.
  - Describe the nature of the Internet and the relationship between the TCP/IP protocol and the Internet.

- **DEFINE MANAGEMENT’S ROLE IN THE DEVELOPMENT, MAINTENANCE, AND ENFORCEMENT OF INFORMATION SECURITY POLICY, STANDARDS, PRACTICES, PROCEDURES, AND GUIDELINES (SLO #03).**
  - Describe an information security blueprint, identify its major components, and explain how it is used to support a network security program.
  - Discuss how an organization institutionalizes policies, standards, and practices using education, training, and awareness programs.
  - Explain contingency planning, and describe the relationships among incident response planning, disaster recovery planning, business continuity planning, and contingency planning.
• DISCUSS COMMON SYSTEM AND NETWORK VULNERABILITIES (SLO #04).
• Name the common categories of vulnerabilities.
• Locate and access sources of information about emerging vulnerabilities.
• Identify the names and functions of the widely available scanning and analysis tools.
• IDENTIFY THE LIMITATIONS OF FIREWALLS (SLO #05).
• Identify common misconceptions about firewalls.
• Explain why a firewall is dependent on an effective security policy.
• Describe the types of firewall protection.
• Evaluate and recommend suitable hardware and software for a firewall application.
• DESCRIBE PACKETS AND PACKET FILTERING (SLO #06).
• Explain the approaches to packet filtering.
• Recommend specific filtering rules.
• WORK WITH PROXY SERVERS AND APPLICATION-LEVEL FIREWALLS (SLO #07).
• Discuss proxy servers and how they work.
• Identify the goals your organization can achieve using a proxy server.
• Choose a proxy server and work with the SOCKS protocol.
• Evaluate the most popular proxy-based firewall products.
• Explain how to deploy and use reverse proxy.
• Determine when a proxy server isn't the correct choice.
• IDENTIFY AND IMPLEMENT DIFFERENT FIREWALL CONFIGURATION STRATEGIES (SLO #08).
• Understand the nature of advanced firewall functions.
• Track firewall log files, and follow the basic initial steps in responding to security incidents.
• Use a remote management interface.
• Adhere to proven security principles to help the firewall protect network resources.
• Update a firewall to meet new needs and threats.
• DESCRIBE THE ROLE ENCRYPTION PLAYS IN A FIREWALL ARCHITECTURE (SLO #09).
• Discuss Internet Protocol Security (IPSec) and identify its protocols and modes.
• Analyze the workings of SSL, PGP, and other popular encryption schemes.
• Explain how digital certificates work and why they are important security tools.
• DESCRIBE USER, CLIENT, AND SESSION AUTHENTICATION (SLO #10).
• Explain why authentication is a critical aspect of network security.
• Explain why firewalls authenticate and how they identify users.
• List the advantages and disadvantages of popular centralized authentication systems.
• Discuss the potential weaknesses of password security systems.
• Discuss the use of password security tools.
• Describe common authentication protocols used by firewalls.
• RECOMMEND BEST PRACTICES FOR EFFECTIVE CONFIGURATION AND MAINTENANCE OF VIRTUAL PRIVATE NETWORKS (SLO #11).
• Explain the components and essential operations of virtual private networks (VPNs).
• Enable secure remote access for individual users via a VPN.
• Create VPN setups, such as mesh or hub-and-spoke configurations.
CISS 341 Implementing Windows Operating System Security

As organizations increasingly come to rely on Windows-based networks, it is essential that system administrators have a complete understanding of the security models integral to Windows Server and Workstation. This course will provide in depth explanations of operating system security features as well as step-by-step configuration guides for proper operating system configuration. It also provides the knowledge and skills students will need to know in order to maintain the integrity, authenticity, availability, and privacy of data.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EXPLAIN WHAT OPERATING SYSTEM AND NETWORK SECURITY MEANS (SLO #01).
- Discuss why security is necessary.
- Explain the cost factors related to security.
- Describe the types of attacks on operating systems and networks.
- Discuss system hardening, including features in operating systems and networks that enable hardening.
- EXPLAIN HOW VIRUSES, WORMS, AND TROJAN HORSES SPREAD (SLO #02).
- Discuss typical forms of malicious software and understand how they work.
- Use techniques to protect operating systems from malicious software and to recover from an attack.
- EXPLAIN ENCRYPTION AND AUTHENTICATION METHODS AND HOW THEY ARE USED (SLO #03).
- Discuss attacks on encryption and authentication methods.
- Explain and configure IP Security.
- CREATE ACCOUNT NAMING AND SECURITY STRATEGIES (SLO #04).
- Discuss how to develop account naming and security policies.
- Explain and configure user accounts.
- Discuss and configure account policies and logon security techniques.
- Discuss and implement global access privileges.
- Use group policies and security templates.
- IMPLEMENT DIRECTORY, FOLDER, AND FILE SECURITY (SLO #05).
- Configure shared resource security, using share permissions in Windows.
- Use groups to implement security.
- Troubleshoot security.
- CONFIGURE THE FIREWALL CAPABILITIES IN OPERATING SYSTEMS (SLO #06).
- Understand how TCP, UDP, and IP work and understand the security vulnerabilities of these protocols.
- Explain the use of IP addressing on a network and how it is used for security.
- Explain border and firewall security.
- EXPLAIN PHYSICAL SECURITY METHODS FOR WORKSTATIONS, SERVERS, AND NETWORK DEVICES (SLO #07).
- Implement a network topology for security.
CISS 342 Implementing Linux Operating System Security

Units: 3
Hours: 48 hours LEC; 18 hours LAB
Prerequisite: CISS 310 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

The UNIX family of operating systems is prized by developers and other IT professionals for their flexibility and openness. Vulnerabilities in standard configurations, however, can make UNIX systems susceptible to security threats. For the many organizations that depend upon UNIX systems, protection against intrusion is an absolute requirement. This course provides the knowledge and skills you need to establish security for the Linux platform. It will present in depth explanations of operating system security features as well as step-by-step configuration guides for proper operating system configuration. This course also will cover the knowledge and skills students will need to maintain the integrity, authenticity, availability, and privacy of data.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EXPLAIN WHAT OPERATING SYSTEM AND NETWORK SECURITY MEANS (SLO #01).
- Discuss why security is necessary.
- Explain the cost factors related to security.
- Describe the types of attacks on operating systems and networks.
- Discuss system hardening, including features in operating systems and networks that enable hardening.
- EXPLAIN HOW VIRUSES, WORMS, AND TROJAN HORSES SPREAD (SLO #02).
- Discuss typical forms of malicious software and understand how they work.
- Use techniques to protect operating systems from malicious software and to recover from an attack.
• EXPLAIN ENCRYPTION AND AUTHENTICATION METHODS AND HOW THEY ARE USED (SLO #03).
• Discuss attacks on encryption and authentication methods.
• Explain and configure IP Security.

CREATE ACCOUNT NAMING AND SECURITY STRATEGIES (SLO #04).
• Discuss how to develop account naming and security policies.
• Explain and configure user accounts.
• Discuss and configure account policies and logon security techniques.
• Discuss and implement global access privileges.
• Use group policies and security templates.

IMPLEMENT DIRECTORY, FOLDER, AND FILE SECURITY (SLO #05).
• Configure shared resource security, using share permissions in Linux or UNIX.
• Use groups to implement security.
• Troubleshoot security.

CONFIGURE THE FIREWALL CAPABILITIES IN OPERATING SYSTEMS (SLO #06).
• Understand how TCP, UDP, and IP work and understand the security vulnerabilities of these protocols.
• Explain the use of IP addressing on a network and how it is used for security.
• Explain border and firewall security.

EXPLAIN PHYSICAL SECURITY METHODS FOR WORKSTATIONS, SERVERS, AND NETWORK DEVICES (SLO #07).
• Implement a network topology for security.
• Explain network communications media in relation to security.

CONFIGURE SECURITY FOR WIRELESS INTERFACES IN WORKSTATION OPERATING SYSTEMS (SLO #08).
• Explain wireless networking and why it is used.
• Describe IEEE 802.11 radio wave networking.
• Explain Bluetooth networking.
• Describe attacks on wireless networks.
• Discuss wireless security measures.

EXPLAIN HOW E-MAIL CAN BE SECURED THROUGH CERTIFICATES AND ENCRYPTION (SLO #09).
• Discuss general techniques for securing e-mail.
• Configure security in popular e-mail tools.

EXPLAIN HOW TO USE DISASTER RECOVERY TECHNIQUES TO SECURE OPERATING SYSTEMS, PREVENT DATA LOSS, AND REDUCE DOWNTIME (SLO #10).
• Deploy UPS systems.
• Create hardware redundancy and apply fault-tolerance.
• Deploy RAID.
• Back up data and operating system files.
• Understand the relationship between baselining and hardening.
• Explain intrusion-detection methods.
• Use audit trails and logs.
• Monitor logged-on users.
• Monitor a network.
This course teaches students how to identify network vulnerabilities and how to take the appropriate countermeasures to prevent and mitigate failure risks for an organization. Students will gain an understanding of the steps needed for good disaster recovery including, how to prepare a disaster recovery plan, the various risks associated with an enterprise network, the diverse job functions of employees in a Disaster Recovery Plan, and the methods needed to implement a plan once it is complete. In addition, each student will develop a Disaster Recovery Plan with a group for a real or fictitious organization.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEFINE AND EXPLAIN INFORMATION SECURITY (SLO #01).
  - Define and explain the basic concepts of risk management.
  - Identify and define the components of contingency planning.
  - Know and understand the role of information security policy in the development of contingency plans.

- MANAGE INCIDENT RESPONSE AND DISASTER RECOVERY PROCEDURES (SLO #02).
  - Identify an individual or group to create a contingency policy and plan.
  - Understand the elements needed to begin the contingency planning process.
  - Create an effective contingency planning policy.
  - Comprehend the steps needed for a business impact analysis report.
  - Summarize the steps needed to create and maintain a budget for enabling the contingency planning process.

- ANALYZE THE PROCESS OF INCIDENT RESPONSE PREPARATION (SLO #03).
  - Describe the process used to organize the incident response process.
  - Understand how policy affects the incident response planning process and how policy can be implemented to support incident response practices.
  - Describe the techniques that can be employed when forming a security incident response team (SIRT).
  - Learn the skills and components required to devise an incident response plan.
  - Know some of the concerns and trade-offs to be managed when assembling the final IR plan.

- IDENTIFY TRUE INCIDENTS FROM INCIDENT CANDIDATES AND FALSE POSITIVES (SLO #04).
  - Identify the elements necessary to detect incidents that pose risk to the organization.
  - Summarize the components of an intrusion detection system.
  - Explain the processes used in making decisions surrounding incident detection and escalation.

- UNDERSTAND THE ELEMENTS OF AN INCIDENT RECOVERY RESPONSE (SLO #05).
  - Build the elements of an incident recovery response, and be aware of the impact of selecting a reaction strategy, developing a notification mechanism, and the creation of escalation guidelines.
  - Explain how an organization plans for and executes the recovery process when an incident occurs.
  - Summarize the need for and the steps involved in the ongoing maintenance of the incident response plan.
  - Summarize what forensic analysis entails, and gain an improved understanding in the processes used to collect and manage data in an electronic environment.

- PLAN FOR BUSINESS RESUMPTION FOLLOWING AN INCIDENT (SLO #06).
  - Outline the relationships between the overall use of contingency planning and the subordinate elements of incident response, business resumption, disaster recovery, and business continuity planning.
  - Become familiar with the techniques used for data and application backup and recovery.
• Outline the strategies employed for resumption of critical business processes at alternate and recovered sites.

• PLAN FOR A DISASTER RECOVERY (SLO #07).

• Summarize the ways to classify disasters, both by speed of onset and source.

• Explain who should form the membership of the disaster recovery team.

• Summarize the key functions of the disaster plan. Explain the key concepts included in the NIST approach to technical contingency planning.

• Describe the elements of a sample disaster recovery plan.

• Identify the need for simultaneous wide access to the planning documents as well as the need for securing the sensitive content of the DR plans.

• SUMMARIZE THE KEY CHALLENGES AN ORGANIZATION FACES WHEN ENGAGED IN DISASTER RECOVERY OPERATION (SLO #08).

• Recognize what actions organizations take to prepare for the activation of the DR plan.

• Recognize what critical elements compose the response phase of the DR plan.

• Comprehend what occurs in the recovery phase of the DR plan.

• Identify how an organization uses the resumption phase of the DR plan.

• Identify how an organization resumes normal operations using the restoration phase of the DR plan.

• OUTLINE THE ELEMENTS OF BUSINESS CONTINUITY (SLO #09).

• Recognize who should be included in the business continuity team.

• Recognize and be able to reference two sample business continuity plans.

• Describe the steps taken to maintain the BC plan.

• Summarize the methods used to continuously improve the BC process.

• CREATE AND DEVELOP A CRISIS MANAGEMENT PLAN (SLO #10).

• Recognize the role of crisis management in the typical organization.

• Conduct the creation of a plan preparing for crisis management.

• Value and deal with post-crisis trauma and work toward getting people back to work after a crisis.

• Identify the impact of the decisions regarding law enforcement involvement.

• Manage a crisis communications process.

• Prepare for the ultimate crisis in an organization through succession planning.

CISS 356 Introduction to Information Assurance

This course introduces the network security specialist to the various methodologies for attacking a network. Students will be introduced to the concepts, principles, and techniques, supplemented by hands-on exercises, for attacking and disabling a network within the context of properly securing a network. The course will emphasize network attack methodologies with the emphasis on student use of network attack techniques and tools and appropriate defenses and countermeasures. Students will receive course content information through a variety of methods: lecture and demonstration of hacking tools will be used in addition to a virtual environment. Students will experience a hands-on practical approach to penetration testing measures and ethical hacking.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #01: UNDERSTAND ETHICAL HACKING CONCEPTS, INCLUDING THE TERM ‘ETHICAL HACKER’, AS WELL AS PENETRATION AND SECURITY TESTING CONCEPTS AND THE DIFFERENCES BETWEEN THEM
- Describe the role of an ethical hacker. Differentiate between what you can or cannot do legally as an ethical hacker.
- Describe how the fundamental concepts of cyber defense can be used to provide system security.
- List the fundamental concepts of the Information Assurance discipline.
- Describe the TCP/IP protocol stack and be able to review the addressing schemes and how they relate to TCP/IP protocol and security
- Explain the basic concepts of IP addressing.
- Explain the binary, octal, and hexadecimal numbering systems.
- SLO #03: CATEGORIZE THE DIFFERENT TYPES OF MALICIOUS SOFTWARE AND THEIR EFFECT ON A SOFTWARE OR HARDWARE
- Critique the physical security attacks and their vulnerabilities.
- Describe the different types of malicious software.
- Classify the different methods of protecting against malware attacks.
- Examine the architecture of a typical, complex system and identify significant vulnerabilities, risks, and points at which specific security technologies/methods should be employed.
- SLO #04: EVALUATE THE VARIOUS TOOLS USED FOR PORT SCANNING
- Research the different types of port scans currently being used; the tools available to most hackers; their purpose, and function.
- Reason what ping sweeps are used for.
- Uncover how shell scripting is used to automate security tasks.
- SLO #05: ANALYZE SEVERAL NETWORK SECURITY DEVICES THAT SECURITY PROFESSIONALS AND NETWORK ADMINISTRATORS CAN USE TO BETTER PROTECT THEIR NETWORKS
- Describe symmetric and asymmetric encryption algorithms. Describe possible attacks on cryptosystems.
- Critique the advantages and disadvantages of different Intrusion Detection (IDS) technology currently available.
- Critique the advantages and disadvantages of different software firewall technology currently available.
- Investigate honeypots, their purpose and usefulness in a network security plan.
- SLO #06: ABILITY TO CREATE SIMPLE SCRIPTS/PROGRAMS TO AUTOMATE AND PERFORM SIMPLE OPERATIONS.
- Demonstrate their proficiency in the use of scripting languages to write simple scripts (e.g., to automate system administration tasks).
- Write simple and compound conditions within a programming language or similar environment (e.g., scripts, macros, SQL).
- Write simple linear and looping scripts.

CISS 360 Computer Forensics and Investigation

</tbody>
</table>

This course is an introduction to the methods used to properly conduct a computer forensics investigation beginning with a discussion of ethics, while mapping to the objectives of the International Association of Computer Investigative Specialists (IACIS) certification. Topics covered include an overview of computer forensics as a profession; the computer investigation process; understanding operating systems boot processes and disk structures; data acquisition and analysis; technical writing; and a review of familiar computer forensics tools.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- REVIEW OF THE COMPUTER FORENSICS PROFESSION (SLO #01)
Illustrate how to prepare for computer investigations and explain the difference between law enforcement agency and corporate investigations.

Explain how other organizations' codes of ethics apply to expert testimony.

SUMMARIZE HOW TO PREPARE FOR A COMPUTER INVESTIGATION (SLO #02).

Apply a systematic approach to an investigation.

Describe procedures for corporate high-tech investigations.

Explain requirements for data recovery workstations and software.

Describe how to conduct an investigation.

SUMMARIZE THE CERTIFICATION REQUIREMENTS FOR COMPUTER FORENSICS LABS (SLO #03).

Catalog the physical requirements for a computer forensics lab.

Draft the criteria for selecting a basic forensic workstation.

MEASURE THE DIFFERENT WAYS FOR PROPER DATA ACQUISITION (SLO #04).

Summarize the different digital evidence storage formats being used today.

Explain ways to determine the best acquisition method.

Explain how to use acquisition tools properly.

Explain how to validate data acquisitions.

CLASSIFY THE RULES FOR PROPER DIGITAL EVIDENCE HANDLING (SLO #05).

Describe how to collect evidence at private-sector incident scenes.

Explain guidelines for processing law enforcement crime scenes.

Review a case to identify requirements and plan your investigation.

ANALYZE HOW DATA IS STORED AND MANAGED ON AN OPERATING SYSTEMS (SLO #06).

Analyze an operating system's file structure.

ANALYZE SOME OF THE DIFFERENT COMPUTER FORENSICS TOOLS (SLO #07).

Explain how to evaluate needs for computer forensics tools.

Describe methods for validating and testing computer forensics tools.

VALIDATE THE EVIDENCE DURING THE ANALYSIS PROCESS (SLO #08).

Describe methods of performing a remote acquisition.

Determine what data to analyze in a computer forensics investigation.

Integrate the necessary tools to validate data and for the most common data-hiding techniques.

IDENTIFY AND RECONSTRUCT GRAPHICS FILES (SLO #09).

Summarize the different types of graphics file formats being used today and describe how to identify unknown ones.

Explain types of data compression and how to locate and recover graphics files.

Summarize the copyright issues associated with graphic files.

DESCRIBE THE IMPORTANCE OF NETWORK FORENSICS (SLO #10).

Illustrate the primary concerns in conducting forensic examinations of virtual machines.

Analyze the standard procedures for performing a live or network acquisition.

ANALYZE EMAIL INVESTIGATIONS (SLO #11).

GENERATE A FORENSIC REPORT (SLO #12).

Explain the importance of reports.

Describe guidelines for writing reports.

Explain how to use forensics tools to generate reports.
Computer Information Science - Web (CISW)

CISW 300 Web Publishing

| Units:   | 3 |
| Hours:   | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | CISC 305 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is an introduction to publishing on the Internet's World Wide Web (www). Topics include creating www pages with the HyperText Markup Language (html), organizing a series of pages into a website, and uploading web pages to a server. The course makes extensive use of the computer tools necessary to insert html tags, create images, and view web documents. This course prepares apprentice web designers and publishers to identify the information dissemination needs of a client, design appropriate World Wide Web solutions, and implement it.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1: EXAMINE AND PRACTICE WEB PUBLISHING**
  - identify information dissemination situations that are suitable for online publishing on the Internet's World Wide Web.
  - compare and contrast the goals, techniques and costs of web publishing with traditional print publishing.

- **SLO 2: CREATE WEB DOCUMENTS USING CODE**
  - apply structured design principles to the creation of World Wide Web documents using HyperText Markup Language (HTML).
  - demonstrate competence and facility with the software, hardware, and networking tools necessary for publishing documents on the World Wide Web.
  - explain the World Wide Web's open standards process and the evolution of the Web as a international communication medium.

- **SLO 3: PLAN, CONSTRUCT AND EVALUATE A WEB SITE PROJECT**
  - participate in realistic web design projects individually and as a member of a team.
  - identify the information dissemination needs of a client, design an appropriate WWW solution, implement it, present the solution to the client, and revise a necessary.
  - evaluate existing World Wide Web sites for style, structure, and usability.
  - develop strategies for expanding, maintaining and improving WWW sites once they have been created.

CISW 304 Cascading Style Sheets

| Units:   | 2 |
| Hours:   | 27 hours LEC; 27 hours LAB |
| Prerequisite: | CISW 300 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course continues the study of technical aspects of standards-based Web design for experienced students and Web professionals. Topics include the separation of content from presentation, dynamic user interaction and designing for alternative devices, using Cascading Style Sheets (CSS) in combination with Extensible Hypertext Markup Language (XHTML).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1: EXAMINE AND PRACTICE USING CSS**
- describe the differences among versions of Cascading Style Sheets (CSS), including issues of cross-platform compatibility.
- utilize proper CSS syntax for developing internal and external style sheets.
- differentiate between a class and id, determine which should be used for a specific situation, and apply it appropriately.
- SLO 2: CREATE WEB DOCUMENTS USING CSS
  - combine selectors to refine style definitions for a group of elements, and/or contextually to one or more elements when used together.
  - demonstrate proficiency in Cascading Style Sheets Positioning (CSS-P), including positioning and layering of objects on multiple web pages.

CISW 308 Mobile Web Development

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: CISW 300 with a grade of "C" or better
Advisory: CISW 304
Transferable: CSU
Catalog Date: June 1, 2020

In this course, students will learn to create websites that are responsive: sites that adapt their layout to the client device being used, whether it be a smartphone, tablet computer, or desktop computer/laptop. Students will learn to use CSS media queries, mobile-friendly HTML5 features, JavaScript enhancements, and various frameworks to build websites that are fluid and flexible.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: ANALYZE WAYS A WEBSITE CAN RESPOND TO THE SPECIFIC NEEDS OF THE ENVIRONMENT ON WHICH IT IS BEING VIEWED.
- Learn how a website can present a layout that is equally - and differently - appropriate for mobile, tablet, and desktop devices.
- SLO #2: EXAMINE WAYS TO LEVERAGE THE CAPABILITIES OF HTML5 TO PRESENT MOBILE-FRIENDLY SITES.
- Understand the varying levels of support for HTML5 features among different devices.
- SLO #3: INVESTIGATE HOW TO USE CSS MEDIA QUERIES.
- Experiment and demonstrate how to use CSS Media Queries to display content modified to fit the client device.
- Integrate video and other media appropriately for mobile devices.
- SLO# 4: USE MOBILE FRAMEWORKS
  - Learn how to use the jQuery Mobile and/or other similar frameworks to add support for touch and other gestures.
  - Learn about and how to create grid-based layouts.

CISW 310 Advanced Web Publishing

Units: 4
Hours: 72 hours LEC
Prerequisite: CISW 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course builds upon previous web publishing concepts and study. The primary focus of this course is the systematic development of interactive web sites. Topics include cascading style sheets, dynamic HTML, forms, client-side programming with JavaScript, CGI scripting with Perl, and web-database interactivity.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EXAMINE AND PRACTICE WEB PUBLISHING.
• identify information dissemination situations that are suitable for online publishing on the Internet’s World Wide Web.
• inventory the software, hardware, and networking tools necessary for publishing interactive web sites on the World Wide Web.
• SLO 2: CREATE WEB DOCUMENTS USING CODE.
• SLO 3: STUDY AND PRACTICE USING MULTIPLE LANGUAGES AND/OR METHODS FOR CREATING WEB PAGES.
• apply structured design and programming principles to the creation of interactive World Wide Web sites using HyperText MarkUp language (HTML), JavaScript, Perl, and Structured Query Language (SQL).
• SLO 4: PLAN, CONSTRUCT AND EVALUATE WEB SITES.
• construct interactive web sites individually and as a member of a team.
• assess the web programming needs of a client.
• formulate and prepare an appropriate web programming solution for a client.

CISW 321 Web Site Development using Dreamweaver

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: CISC 305
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the use of Dreamweaver, a visual Web-authoring tool, to develop and implement Web sites. The topics covered include creating Web pages that contain text, images, links, tables, frames, forms, Cascading Style Sheets and image maps, as well as enhancing Web pages Flash elements and built-in scripting. Additional topics include developing effective Web site structures, using Web site management tools, Web site documentation, making global updates to a Web site, and extending Dreamweaver. Students will work individually and as a member of a team to plan, implement, test, and evaluate Web sites.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO 1: UTILIZE WEB AUTHORING SOFTWARE TO CREATE, MANAGE AND MAINTAIN WEB SITES.
  • Utilize built-in code editing features to modify and repair web pages.
  • Utilize built-in scripting language to implement appropriate web page enhancements.
• SLO 2: DEVELOP AND MANAGE EFFECTIVE WEB SITES.
  • Develop and manage effective web site file structures.
  • Design and create web sites that have effective information design and site navigation.
  • Plan and construct web sites, working individually and as a member of a team.
• SLO 3: DEVELOP STANDARDS FOR WEB SITE CONSISTENCY.
• SLO 4: CREATE DOCUMENTATION FOR WEB PAGES AND WEB SITES.

CISW 326 Intermediate Web Site Development using Dreamweaver

Units: 3
Hours: 54 hours LEC
Prerequisite: CISW 321 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course will reinforce and deepen many Dreamweaver topics covered in the beginning course CISW 321 by providing a more in-depth approach. In addition the course will introduce the other Adobe components such as Flash, Flash Script, and content management using Contribute software. Other topics covered include the following: advanced page formatting using style sheets, web site behaviors, work flow enhancement, templates, libraries, dynamic data, search functions, shopping cart functions, site security, user authentication, and other web services.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: CREATE AND MAINTAIN WEBSITES UTILIZING ADVANCED FEATURES OF A WEB AUTHORING TOOL
  - demonstrate the use and purpose of style sheets, frames and framesets, forms and form elements, and behaviors in a web site.
- SLO 2: DEVELOP PROFESSIONAL WEB SITES IN A REAL-WORLD ENVIRONMENT
  - develop a fully functional web site through team collaboration and task automation.
  - demonstrate how to build a dynamic Web site which include the topics of server-side technologies, databases, and the language used to extract, insert, delete, and update data with databases such as Structured Query Language (SQL).
- SLO 3: PRACTICE UTILIZING WEB ANIMATION
  - develop, edit and maintain rich media content in a web site using Adobe's Flash software.

CISW 350 Imaging for the Web

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: CISC 306 and CISW 300
Transferable: CSU
Catalog Date: June 1, 2020

This course takes a look at designing graphics for the web. Using industry standard graphic software, students will manipulate images and create original graphics. Through lecture, demonstration and hands-on methods as well as class/instructor critiques, students will learn and practice designing graphics for use on the World Wide Web. Topics include developing graphic elements for a web site using a visual theme, creating buttons and intuitive navigational elements, making background textures and images, understanding web file formats, scanning, and creating animation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: CREATE IMAGES FOR WEB PAGES.
  - create buttons, bars and navigation icons for Web pages.
  - develop appropriate background images and textures.
- SLO 2: DEDUCE THE DIFFERENCE BETWEEN VARIOUS GRAPHIC FILE FORMATS.
  - compare and contrast the various graphic file formats and determine when it is appropriate to use each format.
  - develop simple animated graphics.
- SLO 3: DEMONSTRATE AND PRACTICE SCANNING PROCESSES.
  - demonstrate an understanding of the scanning process and technology.
  - compare scanning techniques.
  - transform and enhance existing graphics with transparency and special effects.
  - create graphics which can be downloaded quickly.
- SLO 4: DISCOVER HOW TO CREATE IMAGE MAPS AND ROLLOVERS.
  - design and create image maps.
  - create multiple-state image rollovers using copy and paste script code.

CISW 355 Web Imaging Projects
This course is a continuation of CISW 350. Projects and simulations developing graphics for the web are created for the purpose of marketing and advertising on the Web. The steps, procedures, and common problems encountered when producing quality graphics for professional Web sites are discussed and practiced. Real and simulated projects will include the following: compressing and uploading times, cropping and resizing, digital camera imaging, retouching and fixing photographs, photographic special effects and filters, rasterizing text, implementing backgrounds, buttons, themes, image maps, slicing, and simple animations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: CREATE IMAGES FOR WEB PAGES
  - Generate and manipulate graphics from a variety of graphics software
  - Appraise and implement graphics for client and client base

- SLO 2: EXAMINE AND COMPARE DIFFERENT IMAGE EDITING TOOLS AND TECHNIQUES
  - Compare different technologies that can be used to capture and acquire digital images.
  - Examine how color and image resolution affect image quality.
  - List and differentiate Web graphic file formats and when to use them.

- SLO 3: PLAN, CONSTRUCT, AND EVALUATE A WEB SITE PROJECT
  - Analyze web site concepts and marketing techniques.
  - Evaluate user's short-term and long-term goals
  - Plan how to get information/photos/existing logos, etc. from users in a non-technical environment

CISW 400 Client-side Web Scripting

This course emphasizes the creation of dynamic and interactive web sites using a client-side scripting language such as JavaScript. Topics include the Document Object Model of web pages, core features of the client-side scripting language, event handling, control of windows and frames, functions, and form validation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EXAMINE AND PRACTICE CLIENT-SIDE SCRIPTING.
  - identify dynamic and interactive client-side scripting situations appropriate for client-side scripting.
  - recognize the various components of a web page as objects in the Document Object Model.
  - analyze web publishing problems and situations and develop solutions using the client-side scripting language.

- SLO 2: CREATE SCRIPTS USING CODE.
  - define the core structures, statements, and syntax of the client-side scripting language.
  - write functions and event handlers in the client-side scripting language.

- SLO 3: CONSTRUCT DYNAMIC WEB APPLICATIONS.
  - create dynamic and interactive web applications.
CISW 402 Intermediate JavaScript

In this course, students will learn advanced JavaScript techniques and good standard coding conventions. Topics include advanced form validation, creating jump menus and cascading select menus, and learning to control CSS with JavaScript to manipulating the HTML DOM. Students will also learn about AJAX and practice using it to create interactive, asynchronous web pages. Finally, students will learn to use jQuery and other similar JavaScript frameworks.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO#1: EXAMINE JAVASCRIPT CODING CONVENTIONS AND THE DOM.
- Learn to use advanced techniques, such as anonymous function.
- Learn to create dynamic forms and menus with JavaScript.
- Learn to use regular expressions for advanced form validation.
- SLO #2: CREATE DYNAMIC WEB APPLICATIONS WITH JAVASCRIPT AND DYNAMIC HTML.
- Learn to create visual effects with Dynamic HTML.
- Learn to position elements dynamically.
- SLO #3: ANALYZE XML-HTTP-REQUEST AND AJAX.
- Learn to modify content on the fly.
- SLO #4: EXAMINE JQUERY.
- Learn how to use jQuery and/or similar Frameworks to manipulate the DOM.
- SLO #5: EXAMINE NEW AND UPCOMING JAVASCRIPT TOOLS AND APPLICATIONS.

CISW 410 Middleware Web Scripting

This course emphasizes the creation of dynamic and interactive web sites using a middleware scripting language such as PHP or ASP. Topics include core features of the middleware scripting language, embedding server commands in HTML pages, control structures, functions, arrays, form validations, cookies, environmental variables, email applications, and database-driven web applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: EXAMINE AND PRACTICE MIDDLEWARE SCRIPTING.
  - identify interactive web publishing situations appropriate for middleware web scripting.
  - define the core structures, statements, and syntax of the middleware scripting language.
  - analyze web publishing problems and situations and develop solutions in the middleware scripting environment.
- SLO 2: CREATE SCRIPTS USING CODE.
- write functions using the middleware scripting language.
CISW 440 XML: Introduction to Extensible Markup Language

**Units:** 2
**Hours:** 36 hours LEC
**Prerequisite:** CISW 300 with a grade of "C" or better
**Advisory:** CISA 320 or CISP 350
**Transferable:** CSU
**Catalog Date:** June 1, 2020

XML is a universal method for representing information that is especially well suited for distribution over the Internet. This course will address the most fundamental XML questions - what XML is, why it is needed, and how it can be used. Students will learn the most current, practical XML technologies available at the present time.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1: EXAMINE AND PRACTICE USING EXTENSIBLE MARKUP LANGUAGE (XML).**
- identify and utilize fundamental syntax of XML structure.
- utilize and employ XML applications.
- **SLO 2: CREATE AND PRESENT XML DOCUMENTS.**
- produce XML documents.
- design and present XML documents using style sheets.
Construction | Cosumnes River College

The Construction Technology programs at Cosumnes River College are preparing students for work in new construction, remodel, and energy auditing industries. Course offerings include everything from entry level trades courses, all the way to national certification. Students will train at the college, and at real jobsites. Traditional building practices are covered, but advanced framing techniques, energy efficiency, health and safety, and sustainability are emphasized.

Dean

(916) 691-4300

HarrisC2@crc.losrios.edu

Associate Degree

A.S. in Construction

This program trains students for an industry that is one of the largest employers in the nation. CRC’s construction program is designed to provide students with basic and applied technical skills and knowledge necessary for employment in the building and construction industry. Standard construction procedures are emphasized throughout the program.

HIGHLIGHTS
* Articulation agreements for transfer to specific four-year institutions
* Field trips to a variety of new and existing construction structures for study and appreciation

Catalog Date: June 1, 2020

Total Units: 33
The Construction Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- **PSLO #1:** Career Options and Goals - Summarize career options in the industry, and formulate initial career goals.
- **PSLO #2:** Tools - Identify common hand and power tools used in the trades and residential building science, and demonstrate competence in their safe and efficient use.
- **PSLO #3:** Analysis of building materials - Examine various building materials, and compare their strengths and weaknesses as they relate to structural integrity, sustainability, and environmental impact.
- **PSLO #4:** Safety - Explain the relevance of the Occupational Safety and Health Administration, and interpret those regulations specific to the construction industry.
- **PSLO #5:** Building principles - Utilize fundamental building principles to layout and construct residential and light carpentry structures.
- **PSLO #6:** Analysis of Sustainability - Understand the principles of Green Building and compare and contrast emerging techniques with traditional production building methods.
- **PSLO #7:** Building Performance Testing - Perform shell and duct diagnostics, and prescribe measures that can be tested and retested for marked improvement in the energy efficiency of the home.

**Career Information**

Building and Construction Tradesperson; General Contracting; Estimators; Construction Supervisors; Material Salespersons; Building Inspection; Construction Apprenticeship programs. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

**Certificates of Achievement**

**Construction Pre-Apprenticeship Certificate**

This program prepares students for entry into formal apprenticeship programs and other entry level jobs in the building and construction industry.

*Catalog Date: June 1, 2020*

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Students need to be able to lift 50 pounds and be willing to work outside in all weather conditions.
- Students need to be able and willing to travel to jobsites to build houses and various projects in conjunction with normal class hours.
Student Learning Outcomes
Upon completion of this program, the student will be able to:

- PSLO #1. Understand the career opportunities in the construction field including entry level expectations in various sectors, opportunities for an upward mobility, and strategies for career advancement.
- PSLO #2. Identify and safely operate many of the industry’s common hand and power tools
- PSLO #3. Interpret basic working drawings for residential construction projects, and layout and erect basic floor, wall, and roof assemblies

Career Information
Entry level trades jobs, such as carpenter, electrician, plumber, cement mason. Those jobs can lead to other jobs such as foreman, superintendent, project manager, General contractor, estimator, scheduler, building inspector, safety manager, and even energy auditor.

Construction Certificate
This program prepares students for entry into the building and construction industry as a general tradesperson; and prepares students currently working within the industry for advancement.

- PSLO #2: Tools- Identify common hand and power tools used in the trades and residential building science, and demonstrate competence in their safe and efficient use.
- PSLO #3: Analysis of Building Materials- Examine various building materials, and compare their strengths and weaknesses as they relate to structural integrity, sustainability, and environmental impact.
- PSLO #4: Safety- Explain the relevance of the Occupational Safety and Health Administration, and interpret those regulations specific to the construction industry
- PSLO #5: Building Principles- Utilize fundamental building principles to layout and construct residential and light carpentry structures
- PSLO #6: Analysis of Sustainability- Understand the principles of Green Building and compare and contrast emerging techniques with traditional production building methods.
Green Buildings Certificate

The purpose of this certificate is to develop job skills and an understanding of green strategies for high performance buildings and livable communities. It is focused at students and professionals in the fields of architecture; construction; building management; construction management; building inspection; design technology; landscape; and planning, who want to acquire a comprehensive knowledge of an integrated, economic life-cycle approach to the design of the built environment. It includes study of green rating systems, material choices and environmental strategies for a livable, sustainable future.

**Catalog Date:** June 1, 2020

**Total Units:** 18

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- PSLO 1: Establish meaningful ethical, social and environmental objectives for buildings and communities based on the values of energy and resource conscious design.
- Compare and contrast societal and economic implications of utilizing renewable and non-renewable energy sources.
- Compare and contrast the effect of contextual issues and evaluate their impact on energy consumption, environment and the beneficial experience of interior and exterior spaces.
- PSLO 2: Identify and articulate issues related to the choice of various building, landscape and environmental systems; ideate responsive solutions; and compare the alternatives in making effective, sustainable decisions.
- Analyze and calculate energy use to make informed, environmentally-sound and economic choices to satisfy human needs for comfort and aesthetics.
- Explain the concepts of resource conservation and waste reduction and make sustainable design choices related to materials and construction.
• Develop a comprehensive understanding of green rating systems, livable communities strategies and the ability to apply these concepts in decision-making.

• PSLO 3: Demonstrate independent learning, teamwork and continuing education habits that will help to encourage a life long pursuit of knowledge.

• To use a team work process to identify issues, analyze criteria, research and apply learned principles to synthesize solutions to specific design projects.

• To demonstrate habits of visual note making and independent research by developing a sketch and notebook to record learning.

Career Information

This certificate helps to develop the knowledge base related to sustainable green buildings and environments for the careers of architecture, construction, construction management, building inspection, horticulture, landscape architecture and architectural design technology.

Construction (CONST)

CONST 102 Introduction to Construction Practices

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides students with in-depth analysis of the organization and structure of the construction industry and the many career choices the industry offers. Many of the construction trades are represented, with formal apprenticeship opportunities highlighted. The emerging “Green Building” jobs will be examined, as well as other topics in sustainability. Guest speakers and field trips provide the students a wide view of the expectations of entry-level work, wages, benefits, and work place culture. The curriculum also emphasizes job site safety, practical working knowledge of tool and equipment use, an introduction to blueprints, and an overview of industry math.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: Define the roles that safety plays in the construction industry.

• Predict and evaluate some of the common safety hazards on construction sites.

• Identify and operate various hand tools of the construction industry.

• Define the purpose of OSHA and their regulations for the construction industry.

• SLO #2: Comprehend and value the connection of the fundamental math skills required to lay out, build, and communicate in the construction industry.

• Solve basic math functions including addition, subtraction, multiplication, and division of whole numbers, fractions, and decimals.

• Demonstrate fluency reading a tape measure.

• Recognize and measure basic geometric shapes commonly used in the construction industry.

• Examine and interpret the drawings and symbols used in residential and light commercial construction.

• SLO #3: Summarize the major career paths in the construction industry, and their entry-level expectations.

• Research and list the various career paths in the construction industry.

• Compare and contrast the apprenticeship requirements and responsibilities for a variety of the construction trades.

• Understand the local and global mechanisms driving the emergence of Green Building practices, and define who the major industry organizations are and how they contribute to the movement.

CONST 103 OSHA 10 Hour Safety Training
This OSHA Outreach Training Program is for training construction students and industry workers in basic safety and health hazard recognition and prevention. This course is taught by authorized industry outreach trainers, and successful students will receive the OSHA 10 Hour card. Topics include: Intro to OSHA, Fall Protection, Electrical, Ladders and Stairs, Scaffolds, PPE, Hand and Power Tools, Hazcom, Motor Vehicles, Confined Space Entry, Fire Protection, and Ergonomics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1-Recognize common workplace hazards on jobsites.
- SLO #2- Avoid or prevent workplace health hazards.
- SLO #3- Understand the magnitude of the dangers involved with daily work activity in construction.
- SLO #4- Assess the impact that accidents have on the construction industry
- SLO #5- Discuss how daily work activities on a construction site may lead to a severely disabling injury and the effects this has on the worker and their families.

CONST 105 Rough Carpentry I - Tools, Materials, and Foundations

This course is designed to teach the introductory skills required to be successful in the construction industry. Course topics include an Introduction to the Industry, Hand and Power Tools, Building Materials, Introduction to Plans and Building Codes, Site Layout and Foundations. A heavy emphasis is placed on "hands on" demonstration of proficiency with safe and efficient use of tools, plan reading, as well as the fundamental layout techniques for foundations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 - Demonstrate a fundamental understanding of the nature of the construction industry and the career opportunities to choose from.
- SLO #2 - Identify and describe the major historical milestones that have affected the technologies used in the construction industry
- SLO #3 - Summarize the current and future career opportunities for carpenters and other trades workers
- SLO #4 - Identify personal characteristics and responsibilities of a professional construction trades worker.
- SLO #5 - Examine various building materials and compare their strengths and weaknesses relative to other global resources and production methods
- SLO #6 - Compare and contrast solid sawn lumber with engineered wood products.
- SLO #7 - Discuss topics in sustainability, embodied energy of materials, and the green building movement
- SLO #8 - Describe the common fasteners and adhesives used in construction
- SLO #9 - Recognize and interpret various construction drawings in a set of architectural plans
- SLO #10 - Estimate quantities of materials needed for simple, residential wood-framed building assemblies, using blueprints.
- SLO #11 - Utilize fundamental building principles to layout and construct concrete foundations.
CONST 106 Rough Carpentry II - Floors, Walls, and Roof Framing

Units: 3
Hours: 27 hours LEC; 81 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to teach the skills required to be successful in the construction industry. Course topics include Skill Development in Hand and Power Tool use, as well as techniques in Floor Framing, Wall Framing and Roof Framing. A heavy emphasis is placed on “hands-on” demonstration of proficiency with safe and efficient use of tools, plan reading, as well as the fundamental layout techniques for floor, wall, and roof framing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 - Identify common hand and power tools used in the construction industry and develop skills and competence in their safe and efficient use.
- Demonstrate fluency and skill development in tool use through the efficient, accurate, and safe use of individual tools.
- SLO #2 - Utilize fundamental building principles to layout and construct Floor Framing assemblies.
- Recognize and interpret various construction drawings to apply techniques in layout, cutting, and installation of floor framing members.
- SLO #3 - Utilize fundamental building principles to layout and construct exterior and interior wall Framing assemblies.
- Recognize and interpret various construction drawings to apply techniques in layout, cutting, and installation of wall framing members.
- SLO #4 - Utilize fundamental building principles to layout and construct various types of roof framing Framing assemblies.
- Recognize and interpret various construction drawings to apply techniques in layout, cutting, and installation of Stick framed and engineered roof truss framing assemblies.

CONST 107 Rough Carpentry III - Exterior Finishes

Units: 3
Hours: 27 hours LEC; 81 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to teach the skills required to be successful in the construction industry. Course topics include skill development for hand and power tools, review of framing principles, windows and doors, insulation and ventilation, exterior siding, and roofing. A heavy emphasis is placed on “hands-on” demonstration of proficiency with safe and efficient use of tools, window and door installations, as well as siding and roofing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 - Demonstrate basic proficiency with the hand and power tools commonly associated with the installation of windows and doors, exterior siding, insulation and roofing.
- SLO #2 - Identify common types and styles of exterior doors and windows, and their proper installation techniques.
- Explain the proper procedure for setting exterior doors, as well as the common characteristics, dimensions, and materials used in their manufacture.
- Explain the proper procedure for setting exterior windows, with special emphasis on flashing techniques for water tightness, and smooth operation of moving parts.
- Evaluate and discuss the role that windows play in the long term energy consumption of the building, and the current trends in energy code compliance.
- SLO #3 - Identify common types and styles of exterior siding, and roofing.
- SLO #4 - Identify common types and styles of insulation and ventilation strategies, commonly used in the industry.
- Evaluate and discuss the role that insulation plays in the long term energy consumption of the building, and the current trends in energy code compliance.
- Explain the correlation between a building's thermal envelope, and the need to address mechanical ventilation in newer more air tight buildings.

**CONST 108 Finish Carpentry I - Interior Finish**

**Units:** 3  
**Hours:** 27 hours LEC; 81 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course is designed to teach the skills required to be successful in the construction industry. Course topics include Skill development with tools, Drywall, Interior doors and door frames, Interior trim, Stairs and cabinets. A heavy emphasis is placed on "hands-on" demonstration of proficiency with safe and efficient use of tools, drywall applications, as well as the accurate installation of interior trim.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1 - Identify common hand and power tools used in Interior finish and demonstrate competence and skill development in their safe and efficient use.
- SLO #2 - Identify commonly used materials and techniques used drywall applications, including various types of drywall, fasteners, and interior finishes.
- Demonstrate techniques in layout, cutting, fastening, and finishing drywall projects.
- SLO #3 - Utilize fundamental installation techniques to install interior doors and trim.  
- Identify the various styles of interior doors, and demonstrate how to interpret doors specified in working drawings.
- Demonstrate competence in installing interior doors.
- SLO #4 - Utilize fundamental building principles to layout, cut, and install stairs.
- SLO #5 - Utilize fundamental installation practices to layout and install upper and lower unit cabinets.

**CONST 142 Energy, Performance, and Indoor Air Quality**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course is intended to be the third in the series of Green Building courses, although the sequence is not mandatory. Each course in the series focuses on specific pieces of the larger Green Building sector. This course covers the following topics: The science of energy and its sources, as well as the common alternative and renewable sources of energy that are being researched and developed. Green building guidelines and state energy efficiency standards for buildings and appliances will also be examined. The "Whole House approach" to Building Performance will be an under-current through out the course. Indoor Air Quality, and other health topics will be introduced. This course satisfies the elective units for the CRC Green Building Certificate.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1 Demonstrate the skills and competencies in Building Performance and Indoor Air Quality that will enable them to compete effectively in the emerging green building industry.
- Demonstrate critical thinking skills showing their ability to research and predict the direction of the newest technologies and the advances in the use of existing materials and methods.
- SLO #2 Recognize common residential systems and construction assemblies, and identify typical deficiencies in those systems.
Use the "Whole House Approach" to predict how common problems with systems and construction assemblies adversely affect other parts of the house.

SLO #3 Calculate residential heating and cooling loads using Manual J, as well as determining heating and air conditioning equipment and duct sizes with Manual D and Manual S.

**CONST 143 Photovoltaic Systems**

This course will cover general solar industry topics with an emphasis photovoltaic principles and products. There will be a brief study of the political landscape in California in support of the California Solar Initiative, and market strategies and incentives will also be discussed. There will be some hands on projects to help students learn basic electrical theory and circuits, and an introduction to print reading. System Sizing and components will be covered as well. This class is part of the Green Buildings: Environmental Design, Energy Management and Performance Based Construction Certificate.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1 Demonstrate safe working practices associated with photovoltaic installations.
- SLO #2 Summarize the performance and operating characteristics of PV systems and components.
- Differentiate between acceptable PV systems electrical installations and grounding.
- Describe how interconnected PV systems can affect the utility.
- SLO #3 Further one's interests in a position, or general knowledge in the photovoltaic field.
- Expand upon this course for a foundation of continued interest.

**CONST 160 Introduction to Residential Building Performance**

<table>

This class focuses on preparing students for jobs within the Residential Building Performance and Weatherization industries. This class will train students in residential building science, energy efficiency, and combustion appliance safety. Topics will include nationally recognized Building Performance Institute standards and California Weatherization Installation Standards, Duct and Shell Sealing Measures, and Combustion Appliance Zone testing. This is the first course in the Residential Building Performance and Energy Assessment certificate.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1 Define the role that building performance and weatherization play in helping to reduce the demand for energy.
- Describe the cycle of energy production and consumption across the three major sectors of transportation, industry, and the built environment.
- Identify the energy saving measures performed in accordance with the state and nationally recognized standards.
- SLO #2 Perform shell and duct diagnostics, and prescribe measures that can be tested and retested for marked improvement in the energy efficiency of the home.
- Set up blower door testing equipment to depressurize a home, and test it for air leakage with the use of digital manometers and infrared cameras.
- Set up duct pressurizing equipment to measure duct leakage, a major source of energy waste.
• Analyze information gathered in both of these tests to prescribe cost effective remedies for improved energy efficiency in the home.

• SLO #3 Perform Combustion Appliance Safety Inspections.

• Detect defects and hazards in combustion appliances that may jeopardize the health and safety of the occupants.

**CONST 161 Intermediate Residential Building Performance and Energy Auditing**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** CONST 160 with a grade of "C" or better  
**Catalog Date:** June 1, 2020

This course focuses on preparing students for jobs in the Building Performance and Residential Energy Assessment industry. This class will train students about current auditing methods and standards including inspection, whole house performance diagnostics, building science, software applications for the energy professional, utility fee structure and bill disaggregation, and the industry’s recognized rating systems. This course will also prepare the student for the Building Performance Institute “Building Analyst” exam.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• SLO #1 Identify the industry’s recognized energy assessment and audit measures.

• Examine the energy consuming devices in the home, and identify deficiencies in energy saving potential.

• Perform Combustion Appliance Safety inspections and make appropriate recommendations to insure occupant safety.

• SLO #2: Perform advanced whole house performance diagnosis with Blower Door and Duct Blasters.

• Set up the Blower Door and the Duct Blaster, and make appropriate recommendations for cost effective measures to reduce air leakage.

• Use current software applications for the standardized and/or recognized audit, in conjunction with the results from the pressurizing equipment.

**CONST 163 Advanced Energy Auditing and Energy Modeling**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** CONST 161  
**Catalog Date:** June 1, 2020

This course prepares students for jobs in the building performance and energy auditing industry. This class will train students in advanced energy auditing techniques using energy modeling software, and thermography. Students will be trained to use energy modeling software recognized by the California Energy Commission for both new and existing structures. Students will also be trained to use infra red imaging for accurate, non-invasive inspection of homes, assisting the auditor in locating thermal bridging in the building envelope. Topics in Multifamily and “Envelope Professional” certification will also be discussed.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• SLO #1 Demonstrate entry level proficiency with energy modeling software.

• Collect and enter specific building information required to produce accurate energy efficiency ratings.

• SLO #2 Utilize infra red technology and imaging to assist in the energy auditing of a home.

• SLO #3 Perform the prescribed tests and protocols in the recognized national standards for “Envelope Professional” testing and certification.

• SLO #4 Discuss the current trends for testing and training for Multifamily, low rise, residential structures.
CONST 294 Topics in Green Building Technology

Upon completion of this course, the student will be able to:

- SLO #1 Demonstrate the skills and competencies that will enable them to compete effectively in the emerging green building industry.
- Students will demonstrate critical thinking skills showing there ability to research and predict the direction of the newest technologies and the advances in the use of existing materials.
- SLO #2 Communicate the importance of green building guidelines, and how green building methods help achieve these high standards.
- Students will demonstrate competence in the commonly accepted green building criteria for both residential and commercial construction.
- SLO #3 Compare and contrast a variety of green building materials and methods, and apply the appropriate technologies to meet a clients needs.
- Students will have comprehensive knowledge of many of the green building products, and their manufacturing processes. Students will see case studies of different combinations of green technologies used, and consider budget constraints.

CONST 298 Work Experience in Construction

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE'S CAREER.(SLO 1)
- Understand the effects time, stress, and organizational management have on performance.
- Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
- Examine the career/life planning process and relate its relevancy to the student.
- Demonstrate an understanding of basic communication tools and their appropriate use.
- Demonstrate an understanding of workplace etiquette.
- DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.(SLO 2)
- Link personal goals to long term achievement.
- Display an understanding of creating a professional first impression.
- Understand how networking is a powerful job search tool.
- Understand necessary elements of a résumé.
- Understand the importance of interview preparation.
- Identify how continual learning increases career success.

DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)
Construction Management Technology
| Cosumnes River College

This CRC program offers training of management-level employees for the construction industry, as well as preparation for transfer to a four-year college or university construction program. Graduates may be employed by contractors, business and government agencies for work in project planning, estimating and project coordinating. A student planning to transfer to a four-year college or university should consult the lower division requirements of the anticipated college program.

Dean

Associate Degree

A.S. in Construction Management Technology

This program offers training of management-level employees for the construction industry, as well as preparation for transfer to a four-year college or university construction program. Graduates may be employed by contractors, business and government agencies for work in project planning, estimating and project coordinating. A student planning to transfer to a four-year college or university should consult the lower division requirements of the anticipated college program.

HIGHLIGHTS
* Current curriculum emphasizes analytical problem solving and management skills
* Field trips to a variety of construction sites to study construction methods and procedures (instructor option)
* Transfer potential to four-year programs in Construction Technology

Catalog Date: June 1, 2020

The Construction Management Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Career Information

Plan Checker; Estimator; Superintendent; Project Manager; Contractor; Retail/Wholesale; Office Manager; Developer; Foreman; Laborer. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

Certificates of Achievement

Construction Management Technology Certificate

This CRC program offers training of management-level employees for the construction industry, as well as preparation for transfer to a four-year college or university construction program. Graduates may be employed by contractors, business and government agencies for work in project planning, estimating and project coordinating. A student planning to transfer to a four-year college or university should consult the lower division requirements of the anticipated college program.

HIGHLIGHTS:

* Current curriculum emphasizes analytical problem solving and management skills
* Field trips to a variety of construction sites to study construction methods and procedures (Instructor option)
* Transfer potential to 4-year programs in Construction Technology

NOTE TO TRANSFER STUDENTS: If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

Green Buildings Certificate

The purpose of this certificate is to develop job skills and an understanding of green strategies for high performance buildings and livable communities. It is focused at students and professionals in the fields of architecture; construction; building management; construction management; building inspection; design technology; landscape; and planning, who want to acquire a comprehensive knowledge of an integrated, economic life-cycle approach to the design of the built environment. It includes study of green rating systems, material choices and environmental strategies for a livable, sustainable future.

Upon completion of this program, the student will be able to:

- PSLO 1: Establish meaningful ethical, social and environmental objectives for buildings and communities based on the values of energy and resource conscious design.
- Compare and contrast societal and economic implications of utilizing renewable and non-renewable energy sources.
- Compare and contrast the effect of contextual issues and evaluate their impact on energy consumption, environment and the beneficial experience of interior and exterior spaces.
- PSLO 2: Identify and articulate issues related to the choice of various building, landscape and environmental systems; ideate responsive solutions; and compare the alternatives in making effective, sustainable decisions.
- Analyze and calculate energy use to make informed, environmentally-sound and economic choices to satisfy human needs for comfort and aesthetics.
- Explain the concepts of resource conservation and waste reduction and make sustainable design choices related to materials and construction.
• Develop a comprehensive understanding of green rating systems, livable communities strategies and the ability to apply these concepts in decision-making.

• PSLO 3: Demonstrate independent learning, teamwork and continuing education habits that will help to encourage a life long pursuit of knowledge.

• To use a team work process to identify issues, analyze criteria, research and apply learned principles to synthesize solutions to specific design projects.

• To demonstrate habits of visual note making and independent research by developing a sketch and notebook to record learning.

Career Information
This certificate helps to develop the knowledge base related to sustainable green buildings and environments for the careers of architecture, construction, construction management, building inspection, horticulture, landscape architecture and architectural design technology.

This course covers construction quantity survey and estimating practices for residential, light commercial and green building projects.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• SLO #1: Demonstrate independent learning and effective communication skills.

• Function independently by attending or logging in to class regularly.

• Communicate professionally and effectively (orally and/or in writing).

• SLO #2: Development of introductory skills in construction estimating.

• Identify the elements required to prepare an estimate.

• Identify the skill set required by an estimator.

• Understand and demonstrating the use of internet search, subcontractor communication and employee contributions to an estimate.

• SLO #3: Define skills necessary to measure and quantify the elements in a residence or building.

• Understand units of measure for different materials.

• Perform calculations required to convert dimensions from feet and inches into feet expressed as a decimal.

• Demonstrate knowledge of the relationships between the quantities measured and pricing as used in estimating.

• Estimate quantities and materials for a complete bid.

• Identify the logical inclusion of green products within a construction project and be able to perform value engineering.

• SLO #4: Demonstrate entry-level proficiency in generating a construction materials Take-Off list.

• Identify and quantify required materials.

• Construct cost reports for material, labor and production quantities.

• Calculate reliable cost of a construction task or project.
CMT 120 Legal Aspects of Construction

This course is a summary of the legal implications of licensing, contracts, specifications and their interpretations. Emphasis on the laws of liability, workers compensation, social security, Cal-OSHA, lien laws, and federal laws affecting construction and compliance problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate independent learning and effective communication skills.
- Employ learning by functioning independently in terms of attending or logging in to class regularity.
- Communicate professionally and effectively (orally and/or in writing).
- SLO #2: Identify and recall the foundations of the law as they apply to the many phases of construction.
- Identify appropriate insurances and contracts for different types of parties and projects.
- Comprehend the steps of developing and executing the different contracts of a construction project.
- Identify the steps and options for legal action in all phases of a construction project.
- SLO #3: Apply learned knowledge of legal aspects in project/construction management.
- Employ the use of construction documents to support/clarify a position and/or manage a project.

CMT 134 Construction Scheduling and Critical Path Method

This course introduces computer and manual techniques used in planning, scheduling and controlling construction projects. Network analysis and applications using critical path method and current computer programs will be utilized.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate independent learning and effective communication skills.
- Employ learning by functioning independently in terms of attending or logging in to class regularity.
- Serve and function effectively in project teams simulating real project coordination requirements.
- Communicate professionally and effectively (orally and/or in writing)
- SLO #2: Utilize and apply manual and computer aided scheduling systems used in the construction industry.
- Develop and explain a work breakdown structure, identifying activities, groups of activities, milestones and critical path.
- SLO #3: Apply the use of a schedule for many different project aspects – procurement, contract administration, calculating manpower needs, construction and closeout.
- Calculate real costs and develop historical data for all aspects of construction for specific activities by organization and sorting mechanisms.

CMT 136 Construction Safety

This course will be available soon.

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course will introduce the principles and practices of construction safety and health. It will cover topics such as personal protective equipment, site safety, material handling, and emergency response.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate independent learning and effective communication skills.
- Employ learning by functioning independently in terms of attending or logging in to class regularity.
- Serve and function effectively in project teams simulating real project coordination requirements.
- Communicate professionally and effectively (orally and/or in writing)
- SLO #2: Utilize and apply manual and computer aided scheduling systems used in the construction industry.
- Develop and explain a work breakdown structure, identifying activities, groups of activities, milestones and critical path.
- SLO #3: Apply the use of a schedule for many different project aspects – procurement, contract administration, calculating manpower needs, construction and closeout.
- Calculate real costs and develop historical data for all aspects of construction for specific activities by organization and sorting mechanisms.
This course addresses the application of safety principles in construction with emphasis on the Occupation Safety and Health Act of 1970 and California OSHA.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate independent learning and effective communication skills.
- Employ learning by functioning independently in terms of attending or logging in to class regularly.
- Communicate professionally and effectively (orally and/or in writing).
- SLO #2: Express and explain a basic safety attitude with an understanding of safety laws that apply to construction.
- Describe and explain the importance of proper planning and equipment for remaining safe on a jobsite.
- SLO #3: Explain and demonstrate how to perform safety administration.
- Design a safety plan.
- Present weekly tailgate/safety meetings.
- Describe the growing opportunities for job placement in the safety field.

CMT 295 Independent Studies in Construction Management Technology

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

CMT 300 Introduction to Construction Plans and Specifications

This is an introductory course in how to read building plans and specifications. Intended for both the homeowner and the builder, the course gives emphasis to building plan symbols, interpretation of shop and field drawings, and requirements for obtaining building permits.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate independent learning and effective communication skills.
- SLO #2: Identify how different contract documents affect the outcome of the construction drawings.
- SLO #3: Develop a clear understanding of the critical support of specifications in combination with drawings to complete a project.
- SLO #4: Comprehend how to read different kinds of specifications and drawings regardless of architect, discipline or type of construction.
- SLO #5: Identify Legends, Symbols and Schedules within the drawings.
- SLO #6: Demonstrate how to read different drawings including construction drawings, shop drawings, details and sections.

CMT 310 Materials of Construction

This is a general survey of materials and methods of building construction. An overall view of residential, commercial, and heavy construction practices will be studied.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Compare common construction methods which are currently being used in the field.
- SLO #2: Demonstrate knowledge of terminology related to construction processes.
- SLO #3: Evaluate appropriate installation techniques for specified materials.
- SLO #4: Evaluate common construction materials which are currently being used in the field.
- SLO #5: Demonstrate knowledge of terminology related to construction materials.
- SLO #6: Analyze composition of specific materials and products used in construction.
CMT 313 Computer Estimating for Construction

This course is designed to meet current demands for computerized estimating in the construction industry. This course will integrate computer technology with current construction estimating practices. This technology will provide the student with experience in determining construction quantities and costs quickly, economically and effectively.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate independent learning and effective communication skills.
- Employ learning by functioning independently in terms of attending or logging in to class regularly.
- Communicate professionally and effectively (orally and/or in writing).
- SLO #2: Develop, explain and apply the foundations of estimating with historical data and computer based software systems.
- Demonstrate computer capabilities in producing man-hour labor and material pricing totals efficiently.
- Produce a variety of computer generated reports to provide format suitable to specific party the information is addressing.
- SLO #3: Comprehend the importance of historical data and how to accumulate it.
- research and analyze a scan of internet resources for product pricing and current cost impact trends.
- analyze an accumulation of estimating data for quantity comparisons in future jobs is also a primary objective.
- SLO #4: Employ the use of construction documents to support/clarify partial or total cost of a project.
- Comprehend the difference between budgets, estimates and bids.
- Identify and clearly separate and support pricing for both soft and hard construction costs.

CMT 495 Independent Studies in Construction Management Technology

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

Explain the importance of the major discipline of study in the broader picture of society.

SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

</tbody>
</table>

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER (SLO 1)
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.
- DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER (SLO 2)
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.
- DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)
Culinary Arts Management | Cosumnes River College

This program provides training for employment in commercial culinary service operations. Courses begin at entry-level training; advanced courses build upon skills acquired in pre-requisite courses.

The program includes coursework in culinary arts, baking and pastry, food and equipment use and identification, culinary sanitation, nutrition, marketing, legal control and financial analysis. Students will apply those skills with hands-on training in production centered labs.

Sanitation training is offered as an integral part of each certificate and degree and is certified by the National Restaurant Association in collaboration with the Sacramento County Environmental Health Division.

CAM 300, 306, and 301 serve as pre-requisite courses for many higher level courses.

The Culinary Arts Management Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences. (PSLO 1)
- will demonstrate awareness, understanding, and skills necessary to live and work in a diverse world. (PSLO 2)
- demonstrate basic mathematical principles for foodservice record keeping, baking procedures, and recipe conversions. (PSLO 3)
- understand and practice proper sanitation and safety procedures critical to the foodservice industry. (PSLO 4)
- demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry. (PSLO 5)
- demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation and service. (PSLO 6)
- demonstrate effective techniques for the selection and procurement of food and non-food items used common to the foodservice industry. (PSLO 7)
- exhibit a basic understanding of nutrition and the relationship between nutrition and food preparation. (PSLO 8)
- demonstrate basic knowledge of cooking techniques and procedures. (PSLO 9)
- practice professional ethics, provide leadership, demonstrate personal and global responsibility and work effectively as a team member. (PSLO 10)
- integrate human, financial and physical resources management into foodservice operations. (PSLO 11)

**Career Information**

Culinary Manager; Culinary Supervisor; Cook; Kitchen Manager; Waiter/Waitress; Restaurant Manager; Caterer; Food Service Worker; Baker; School Food Service Specialist.

**A.A. in Restaurant and Food Service Entrepreneurship**

This program provides training and education for those wishing to own a restaurant or other food service venture. The various elements involved in starting and operating a small business are covered as well as training in food theory and production, safety and sanitation, culinary purchasing, and service.

Total Units: 42 - 43

The Restaurant and Food Service Entrepreneurship Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- (PSLO 1) Understand and practice proper sanitation and safety procedures critical to the food service industry.
- (PSLO 2) Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation and service.
- (PSLO 3) Demonstrate effective techniques for the selection and procurement of food and non-food items used common to the food service industry.
- (PSLO 4) Demonstrate basic knowledge of cooking techniques and procedures.
- (PSLO 5) Exhibit a basic understanding of nutrition
- (PSLO 6) Demonstrate skill and comprehension in entrepreneurship as indicated by course outcomes.
- (PSLO 7) Transform an entrepreneurial idea into a viable business concept.
- (PSLO 8) Employ appropriate management, finance, accounting, and marketing techniques required in operating a business.
- (PSLO 9) Demonstrate the ability to think critically and analyze problems.
- (PSLO 10) Evaluate the feasibility of success when starting a new business venture.
- (PSLO 11) Research and compose a business plan that includes all facets of starting and managing a business.
- (PSLO 12) Express ideas and facts clearly and completely.
- (PSLO 13) Develop effective oral and written communication skills that can be applied in various business settings.

Career Information

Small Business Owner- Restaurant and Food Service field. Restaurant manager.

Certificates of Achievement

Basic Culinary Services Certificate

This program provides training in the entry-level skills necessary for a career in food service. Courses begin at basic training, culminating in an advanced course focusing on the quantity production of food.

The program includes coursework in culinary arts, culinary sanitation, and customer service. Students will apply skills with hands-on training in production centered labs.

Sanitation training is offered as an integral part of each certificate and degree in the department and is certified by the National Restaurant Association as well as Sacramento County Environmental Health Division.

This certificate is the first in a program series. After completion, students can continue CAM coursework towards a certificate in cooking and supervision and then towards an A.A. Degree, with all coursework counting as part of the requirements for the degree.

All CAM curriculum is developed in collaboration with Sacramento employers in restaurants, schools, hospitals, and grocery stores.

- demonstrate basic knowledge of cooking techniques and procedures. (P-SLO 9)

### Career Information

This program is designed to prepare graduates with the skills necessary to enter into employment in a school foodservice operation or to provide the knowledge and skills necessary for those in school foodservice seeking a promotion from entry level employment.

### Culinary Arts Management (CAM)

#### CAM 294 Topics in Culinary Arts Management

**Units:** 0.5 - 4  
**Hours:** 5 - 36 hours LEC; 13 - 108 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

Coursework designed to cover special topics not included in current culinary offerings. Topics may be offered in a workshop or seminar presentation on timely subjects or targeted for specific audiences.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:
CAM 300 Introduction to Culinary Arts Management

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an overview of the skills and attributes that predict success for professionals in the restaurant/foodservice industry. Entry skills to be taught include mise en place, work simplification/time management, computational skills including measurements and conversions, flavor profiles, plating and garnishing, interview skills, menu development, recipe writing and an overview of the history and modern state of the restaurant/foodservice industry.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences (P-SLO1).
  - Objective 1a: Complete a written project and presentation outlining student career goals.
  - Objective 1b: Participate in a mock interview activity.
  - Objective 1c: Apply work simplification and time management principles by developing sample production schedules.

- SLO 2: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the hospitality industry (P-SLO5).
  - Objective 2a: Describe career opportunities in the hospitality industry.

- SLO 3: Demonstrate basic mathematical principles for food service record keeping, baking procedures, and recipe conversions (P-SLO3).
  - Objective 3a: Pass the computation exam with at least 70% accuracy. (Computation topics to include measurements and recipe conversions)

- SLO 4: Recall basic principles in the areas of: flavor profiles, plating/garnishing, menu development, and recipe writing.

CAM 301 Food Theory and Preparation

Units: 4
Hours: 36 hours LEC; 108 hours LAB
Prerequisite: None.
Corequisite: CAM 300 and 306
Transferable: CSU
Catalog Date: June 1, 2020

A comprehensive study of the basic principles and techniques involved in professional food preparation. The principles covered within this course will serve as the foundation for all other lab courses. Topics will including: work simplification, measurements/conversions, knife skills, soups, sauces, salads, heat transfer methods, equipment recognition, cleaning, use of hand tools/measuring devices, as well as identifying, cleaning, and cutting raw materials. This course will examine the reasons for procedures and phenomena and the prevention and/or correction of cooking failures. The laboratory emphasizes theory application through the preparation of soups, sauces, salads, vegetables, meats, poultry, seafood, breakfast dishes, grains, pastas and potatoes.

This course may require out of class time attendance at events (all required events will be listed in the course syllabus).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences (P-SLO1).
- SLO 2: Demonstrate basic mathematical principles for foodservice record keeping, baking procedures, and recipe conversions (P-SLO3)
- SLO 3: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry. (P-SLO5)
- SLO 4: Demonstrate basic knowledge of cooking techniques and procedures. (P-SLO9)
- SLO 1: demonstrate the ability to communicate in the hospitality industry using the correct culinary terminology to a variety of audiences (P-SLO1).
- SLO 2: demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation and service (P-SLO6).
- Objective 2a: analyze quality characteristics in raw and cooked foods.
- Objective 2b: correct errors in preparation where possible to produce an acceptable product
- SLO 3: apply knowledge of cooking techniques and procedures (P-SLO9).
- Objective 3a: measure and scale ingredients correctly.
- Objective 3b: recognize kitchen tools and implements by name and use them appropriately
- Objective 3c: apply different methods of heat transfer and soup/sauce production appropriately.
- SLO 4: utilize proper sanitation and safety procedures critical to the foodservice industry (P-SLO4).
- Objective 4a: apply sanitary techniques in the laboratory.

CAM 302 Food and Culture in America

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| General Education: | AA/AS Area VI |
| Catalog Date: | June 1, 2020 |

This course is an in-depth study of the food habits of various culinary regions in the United States. This course will examine the geography, history, and people that have shaped each region's food culture. Defining dishes and principle ingredients as well as the modern cuisine of the regions will be studied.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate awareness, understanding, and skills necessary to live and work in a diverse world (P-SLO2).
- Objective 1a: Understand the food habits of each unique american culinary region and the groups of people that helped shape the cuisine.
- SLO 2: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry (P-SLO5).
- Objective 2a: Describe the traditional food habits of each unique American Region
- SLO 3: Demonstrate basic knowledge of cooking techniques and procedures (P-SLO9).
- Objective 3a: List the foods and equipment used in each region studied.
- SLO 4: practice professional ethics, provide leadership, demonstrate personal and global responsibility and work effectively as a team member (P-SLO10).
- Objective 4a: Work in small groups to prepare projects and presentations.

CAM 303 Food Product Identification

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course will cover the identification of different food products. Written materials, hands-on interaction with products, and product sampling will be utilized as methods to help students identify and understand products being studied.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1:** demonstrate effective techniques for the selection and procurement of food and non-food items used common to the foodservice industry (P-SLO7).
- Objective 1a: identify quality standards in fresh and dried herbs
- Objective 1b: evaluate cheeses and the effect of different production methods on the final product.
- **SLO 2:** understand and practice proper sanitation and safety procedures critical to the foodservice industry (P-SLO4).
- Objective 2a: Understand proper storage conditions and standards for products discussed.

This course covers the principles of food microbiology, important foodborne diseases, standards that are enforced by regulatory agencies, and applied measures for the prevention of foodborne diseases and other microbiological problems. All phases of sanitation for professional culinary operations are covered in the context of schools, hospitals and commercial restaurants and cafeterias. Subjects covered include types and causes of food borne illnesses, correct procedures for handling food in quantity, and the principles of cleaning and sanitizing. The course focuses on practical applications for culinary workers, supervisors, and trainers. Completion of the course includes optional certification by the Educational Foundation of the National Restaurant Association.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1:** understand and practice proper sanitation and safety procedures critical to the foodservice industry (P-SLO4).
  - Objective 1a: Analyze the importance of proper culinary sanitation to profitability and operational accreditation.
  - Objective 1b: List the survival needs of food borne, pathogenic bacteria, molds, yeasts and viruses and relate these needs to culinary conditions.
  - Objective 1c: List the foods that are potentially hazardous and subject to food borne illnesses transmission.
  - Objective 1d: Recognize major microbial causes of food borne illness and relate them to common food source.
  - Objective 1e: Describe procedures to follow in the event of food contamination by physical contaminants such as metals, glass, etc.
  - Objective 1f: Explain the principle of “first in, first out” for food storage.
  - Objective 1g: Describe and practice rules of professional personal hygiene.
- **SLO 2:** demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry (P-SLO5).
  - Objective 2a: Explain proper methods for manual and machine dishwashing.
  - Objective 2b: Analyze common dishwashing problems and suggest solutions.
  - Objective 2c: Describe common culinary accidents and suggest preventive practices.
- **SLO 3:** demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation, and service (P-SLO6).
  - Objective 3a: Recognize and describe signs of deterioration in food ingredients.
  - Objective 3b: Describe the hazard to a culinary operation from insects and rodents and explain common routes of entry.
- **SLO 4:** demonstrate basic knowledge of cooking techniques and procedures (P-SLO9).
  - Objective 4a: Describe proper temperature control for potentially hazardous food.
  - Objective 4b: List the correct temperatures for refrigerated and frozen foods.
  - Objective 4c: Explain proper procedures for thawing frozen foods.
CAM 310 Quantity Food Production

Units: 3
Hours: 18 hours LEC; 108 hours LAB
Prerequisite: CAM 300, 301, and 306 with grades of “C” or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the principles of quantity food production and service. The production and service of industry quality and quantity food will be covered. Components may include knife skills, equipment recognition, use of hand tools and measuring devices, and cleaning/cutting raw materials. This course may also cover quantity preparation of sandwiches, soups, salads, garde manger items, vegetables, meats, poultry, seafood, breakfast dishes, rice and other grains, pastas, and potatoes, sauces and simple dessert items.

This course may require out of class time attendance at events (all required events outside of class time will be listed in the course syllabus).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate basic mathematical principles for food-service record keeping, baking procedures, and recipe conversions (P-SLO3).
- Objective 1a: measure and scale ingredients accurately.
- SLO 2: Understand and practice proper sanitation and safety procedures critical to the food-service industry (P-SLO-4).
- Objective 2a: use acceptable sanitation practices in the laboratory.
- SLO 3: Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation, and service (P-SLO6).
- SLO 4: Exhibit a basic understanding of nutrition and the relationship between nutrition and food preparation (P-SLO8).
- Objective 4a: adapt recipes to accommodate a variety of dietary restrictions.
- SLO 5: Demonstrate basic knowledge of cooking techniques and procedures (P-SLO-9).
- Objective 5a: recognize, use and clean professional hand tools including ladles, scoops, thermometers, spatulas, and skimmers, dough cutters, china cap, tongs, colander, sieve, can opener, pastry brush, pastry bag, etc.

CAM 312 Baking and Pastry

Units: 3
Hours: 18 hours LEC; 108 hours LAB
Prerequisite: CAM 300, 301, and 306 with grades of “C” or better
Advisory: CAM 310
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed to introduce students to the fundamental principles of baking and procedures for preparing baked goods, pastries, and desserts. Students gain knowledge and understanding of baking science; laboratory hours are spent in commercial production. Products may include yeast breads, Danish pastry, croissants, puff pastry, tortes and fine cakes, tarts and pies, and chocolate. Emphasis is placed on production of high-quality products and professional presentation. This course may require out of class time attendance at events (all required events outside of class time will be listed in the course syllabus).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate basic mathematical principles for food-service record keeping, baking procedures, and recipe conversions (P-SLO3).
- Objective 1a: measure and scale ingredients accurately.
- SLO 2: Understand and practice proper sanitation and safety procedures critical to the food-service industry (P-SLO-4).
- Objective 2a: use acceptable sanitation practices in the laboratory.
- SLO 3: Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation, and service (P-SLO6).
- SLO 4: Exhibit a basic understanding of nutrition and the relationship between nutrition and food preparation (P-SLO8).
- Objective 4a: adapt recipes to accommodate a variety of dietary restrictions.
- SLO 5: Demonstrate basic knowledge of cooking techniques and procedures (P-SLO-9).
- Objective 5a: recognize, use and clean professional hand tools including ladles, scoops, thermometers, spatulas, and skimmers, dough cutters, china cap, tongs, colander, sieve, can opener, pastry brush, pastry bag, etc.
SLO 1: Demonstrate basic mathematical principles for foodservice record keeping, baking procedures, and recipe conversions. (P-SLO3)

Objective 1a: Scale and measure baking ingredients accurately.

SLO 2: Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation, and service. (P-SLO6)

Objective 2a: Evaluate the quality of finished products

Objective 2b: Analyze quality defects in baked products and specify possible errors in technique or ingredient selection.

SLO 3: Demonstrate basic knowledge of cooking techniques and procedures. (P-SLO9)

CAM 316 Hors D'oeuvres and Canapes

This course is designed to teach students the production of hors d'oeuvres and canapes. Hot and cold hors d'oeuvres as well as the production of canapes will be emphasized. Service styles, service issues, production pointers, and logistics of catering functions will be emphasized.

This course may require out of class time attendance at events (all required events outside of class time will be listed in the course syllabus).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate basic mathematical principles for foodservice record keeping, baking procedures, and recipe conversions. (P-SLO3)
- SLO 2: Understand and practice proper sanitation and safety procedures critical to the foodservice industry. (P-SLO4)
- SLO 3: Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation, and service. (P-SLO6)
- Objective 3a: Plan and arrange attractive food platters for buffets.
- Objective 3b: Plan menus appropriate for receptions and parties.
- SLO 4: Demonstrate basic knowledge of cooking techniques and procedures. (P-SLO9)
- Objective 4a: Prepare a wide variety of hot and cold hors d'oeuvres.

CAM 320 Culinary Management

The course is designed to introduce students to the manager's role in organizing, planning, and control of production for a culinary operation. Topics may include menu planning and pricing, scheduling of staff and production, portion and temperature control, recipe standardization and scaling, and elements of culinary layout and design.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences. (P-SLO1)
- SLO 2: Demonstrate basic mathematical principles for foodservice record keeping, baking procedures, and recipe conversions. (P-SLO3)
• Objective 2a: Cost menu items and calculate selling prices.

• SLO 3: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the food-service industry. (P-SLO5)

• Objective 3a: List and explain methods of controlling portion size.

• SLO 4: Demonstrate basic knowledge of cooking techniques and procedures. (P-SLO9)

• Objective 4a: Standardize and accurately scale recipes for specific operational needs.

• SLO 5: Integrate human, financial and physical resources management into foodservice operations. (P-SLO11)

• Objective 5a: Compare operational layouts of facilities and equipment.

• Objective 5b: Discuss the factors affecting sales mix forecasting.

CAM 322 Culinary Customer Service

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Culinary customer service is a skills development course to provide entry-level training in front-of-house service principles. The components of professional service styles will serve as the foundations for this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO 1: Demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences. (P-SLO1)

• SLO 2: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry. (P-SLO5)

• Objective 2a: Analyze the importance of service to the function of profitability of the operation.

• SLO 3: Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation, and service. (P-SLO6)

• Objective 3b: Understand appropriate table settings for varying methods of service.

CAM 324 Culinary Supervision

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed to help supervisors meet the challenges and demands of the hospitality field. The course will focus on the skills necessary to be effective leaders, developing human relations' skills and building on workplace diversity. The course will also cover communicating effectively, and creating a positive work climate. Management responsibilities of planning, organizing, controlling, decision making, problem solving and delegating will be included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO 1: Demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences. (P-SLO1)

• Objective 1a: Appreciate fully the central role of good communication in directing personnel and discuss strategies for overcoming obstacles, including language and cultural barriers.

• Objective 1b: List the essential steps in giving instructions and explain how to carry them out effectively.
Objective 1c: Analyze the culinary labor market and describe how to conduct an employment interview.

Objective 1d: Describe the essential steps in giving instructions and explain how to carry them out effectively.

Objective 1e: Demonstrate the building of a positive work environment in culinary operations.

SLO 2: Practice professional ethics, provide leadership, demonstrate personal and global responsibility and work effectively as a team member. (P-SLO10)

Objective 2a: Explain the importance of planning your own time as a supervisor.

Objective 2b: Describe how to provide constructive criticism.

Objective 2c: List and discuss the four steps of conflict resolution.

Objective 2d: Define three essential elements of successful discipline and explain the importance of each.

Objective 2e: Define the concepts of responsibility, authority, and accountability and explain their relationships and their role in delegation.

Objective 2f: List the major steps in job instruction training and demonstrate how to apply them.

Objective 2g: Define list the purposes, uses, and benefits of performance reviews.

SLO 3: Integrate human, financial and physical resources management into foodservice operations. (P-SLO11)

Objective 3a: Describe a supervisor's obligation and responsibilities to owners, customers, and employees.

CAM 326 Applied Culinary Purchasing

Units: 2
Hours: 36 hours LEC
Prerequisite: CAM 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides a comprehensive view of purchasing activity as well as its relationship to the management of a successful hospitality operation. This course offers practical applications of purchasing principles from the culinary manager's viewpoint. This course focuses on distribution channels, purchasing principles and buying techniques, selection factors, receiving, storing, issuing and inventory control.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Understand and practice proper sanitation and safety procedures critical to the foodservice industry. (P-SLO4)
- Objective 1a: Identify optimal storage conditions for meat, poultry, seafood, fresh produce, dairy products, eggs, etc.
- SLO 2: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry. (P-SLO5)
- Objective 2a: Differentiate between As Purchased (AP) and Edible portion (EP) cost factors.
- Objective 2b: Summarize the use of perpetual, physical and computerized inventory control methods.
- SLO 3: Demonstrate effective techniques for the selection and procurement of food and non-food items used commonly to the foodservice industry. (P-SLO7)
- Objective 3a: Describe the types of information included on specifications for food products
- SLO 4: Practice professional ethics, provide leadership, demonstrate personal and global responsibility and work effectively as a team member. (P-SLO10)
- Objective 4a: Describe common methods to prevent security problems in the purchasing function.
- SLO 5: Integrate human, financial and physical resources management into foodservice operations. (P-SLO11)
- Objective 5a: Describe common methods for determining optimal inventory level.
- Objective 5b: Recognize common control and security problems in purchasing functions.
CAM 330 Legal Aspects of Culinary Management

This course is an introduction to the legal aspects of culinary operations through an explanation of and applications to legal subjects relevant to culinary operations. Topics include government regulations, patron civil rights, liability for sales of food and alcoholic beverages, as well as liability for patron safety and property, selection and supervision of employees, property rights and forms of business organizations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry. (P-SLO5)
  
  Objective 1a: Explain potential operator liability caused by unsafe conditions.
  
  Objective 1b: Define areas of liability created by sales of foods and beverages and identify necessary action to avoid it.
  
  Objective 1c: Outline tests for the legality, validity and enforceability of contracts.
  
  Objective 1d: Outline types of zoning restrictions that may be imposed by local governments
  
  Objective 1e: Describe the requirements of local non-smoking ordinances
  
- SLO 2: Practice professional ethics, provide leadership, demonstrate personal and global responsibility and work effectively as a team member. (P-SLO10)
  
  Objective 2a: Define "house rules" and provide guidelines for formulating such a rule.
  
  Objective 2b: Explain the legal rights and duties of employers and employees with regard to civil rights laws, wage and hour laws, employee screening and surveillance, safety requirements, and union-management relations.
  
  Objective 2c: List records that employers are required to keep.
  
  Objective 2d: Outline obligations regarding employee wages, taxation, tip reporting and immigration status.
  
- SLO 3: Integrate human, financial and physical resources management into foodservice operations. (P-SLO11)
  
  Objective 3a: Discuss areas where culinary operations may be effected by state and local regulations.
  
  Objective 3b: Analyze case studies to determine potential liability claims and possible defenses.
  
  Objective 3c: Compare and contrast the different forms of business organization available to the culinary business.
  
  Objective 3d: Explain the purpose and types of bankruptcy.

CAM 332 Culinary Financial Management

This course focuses on food and beverage pricing, culinary accounting and finance for culinary operations. The course includes the use of accounting techniques in such areas as analyzing business performance, budgeting, as well as cost and profit planning.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate basic mathematical principles for foodservice record keeping, baking procedures, and recipe conversions. (P-SLO3)
  
  Objective 1a: Calculate the selling price of menu items on the basis of cost and mark-up.

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: CAM 300
Transferable: CSU
Catalog Date: June 1, 2020
CAM 334 Culinary Marketing

Units: 2  
Hours: 36 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course is an introduction to culinary marketing with a profile of management's role in marketing. The course includes information systems and marketing research methods to assist in planning. Hospitality consumers and their behavior are discussed. Other topics include advertising and group sales strategies. The emphasis of the course will be on the design of menus and menu pricing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences. (P-SLO1)
- Objective 1a: Design menu copy appropriate to a specified concept.
- SLO 2: Demonstrate awareness, understanding, and skills necessary to live and work in a diverse world. (P-SLO2)
- SLO 3: Demonstrate basic mathematical principles for food-service record keeping, baking procedures, and recipe conversions. (P-SLO3)
- Objective 3a: Discuss effective menu pricing tactics
- SLO 4: Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry. (P-SLO5)
- Objective 4a: Compare and contrast the effectiveness of various promotional media.
- SLO 5: Demonstrate critical thinking skills needed to assess and correct problems within food preparation, production, presentation, and service. (P-SLO6)
- SLO 6: Practice professional ethics, provide leadership, demonstrate personal and global responsibility and work effectively as a team member. (P-SLO10)
- Objective 6a: Describe the role of management in the marketing plan.
- SLO 7: Integrate human, financial, and physical resources management into foodservice operations. (P-SLO7)

CAM 340 Nutrition for Culinary Professionals

Units: 2  
Hours: 36 hours LEC  
Prerequisite: CAM 300  
Advisory: None.  
Transferable: CAM 300  
Catalog Date: June 1, 2020

This course is designed for students in Culinary Arts Management and focuses on personal nutrition, as well as nutrition in restaurants and foodservices. The course will cover the dietary needs of selected populations and methods used to meet those needs. Emphasis is placed on recipe adaptation and menu planning for more healthful menu offerings in culinary operations. Successful completion of this course meets the certification requirements by the American Culinary Federation.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO 1:** Demonstrate the ability to use professional written and oral communication skills necessary to communicate to a variety of audiences. (P-SLO1)
- Objective 1a: Revise recipes to improve nutrients considerations to include lower fat, lower salt, increase complex carbohydrates, fiber and higher vitamin and mineral content.
- Objective 1b: Discuss the methods of communication of nutrient content with the dining public.
- Objective 1c: Design menus that contain tasteful, appropriate, nutritious offerings.
- **SLO 2:** Demonstrate the ability to develop, examine, question, and explore perspectives or alternatives to problems within the foodservice industry. (P-SLO5)
- Objective 2a: Analyze the state of the American diet for nutritional quality.
- Objective 2b: Describe the main changes in eating trends and habits and regional influences on these trends.
- Objective 2c: List and describe some trendy foods that can be used to capitalize on the public’s desire for healthful food alternatives.
- Objective 2d: Correlate trends in American food consumption to disease incidence.
- **SLO 3:** Exhibit a basic understanding of nutrition and the relationship between nutrition and food preparation. (P-SLO8)
- Objective 3a: Describe for the major nutrients: composition, functions, food sources and functional characteristics in cooking.
- Objective 3b: Describe the difference between saturated fat, unsaturated fat and cholesterol.
- Objective 3c: List the major goals and guidelines for improving the American diet.
- Objective 3d: Read and interpret nutritional labels on manufactured foods.
- **SLO 4:** Demonstrate basic knowledge of cooking techniques and procedures. (P-SLO9)
- Objective 4a: List menu alternative appropriate as healthful choices for children, the elderly and athletes.

CAM 495 Independent Studies in Culinary Arts Management

**Units:**
1 - 3

**Hours:**
54 - 162 hours LAB

**Prerequisite:**
None.

**Transferable:**
CSU

**Catalog Date:**
June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
CAM 498 Work Experience in Culinary Arts Management

- **Units:** 1 - 4
- **Hours:** 60 - 300 hours LAB
- **Prerequisite:** CAM 300, 301, 306, and 310 with grades of "C" or better
- **Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Culinary Arts Management.
- **Transferable:** CSU
- **General Education:** AA/AS Area III(b)
- **Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student’s progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER. (SLO 1)**
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.

- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER. (SLO 2)**
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.

- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR. (SLO 3)**
Deaf Culture and American Sign Language Studies | Cosumnes River College

CRC offers courses in Deaf Studies designed to introduce students to Deaf Culture and American Sign Language Studies. Students learn basic skills to enable them to communicate with members of the deaf community. Moreover, students learn about deaf culture such as cultural behaviors and values.

Dean

Associate Degree

A.A. in Deaf Studies

This degree provides an introductory overview of the Deaf community and American Sign Language in cultural context. Students completing the Deaf Studies A.A. degree will develop an understanding and respect for the Deaf culture which will enable them to collaborate effectively with Deaf people for the empowerment of the Deaf community. The Deaf Studies A.A. provides students with the psychosocial dynamics necessary to work in educational or social service setting or to pursue an advanced degree at a 4-year institution.

Catalog Date: June 1, 2020

The Deaf Studies Associate in Arts (A.A.) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Compare and contrast characteristics that impact a Deaf person’s life in the following areas: the world of work, education, family, language and social development.
- Demonstrate the ability to carry on an American Sign Language conversation consistent with the ability of a 4th semester second language students with a Deaf individual or groups of Deaf people.
- Demonstrate characteristics related to personal growth and adjustment in various populations within and outside of the Deaf community.
- Apply skills in working with various Deaf participants within and outside of the Deaf community.
- Demonstrate skills in working with school-age Deaf children in an educational setting.
- Compare and differentiate the Deaf individual to individuals of diverse populations when comparing human development.
- Demonstrate appropriate cultural interactions within the Deaf community.
- Demonstrate ability to communicate respectfully in a Deaf-culture setting.

Career Information

This degree prepares students for entry-level positions such as paraprofessional services in an individual or group setting, in an educational or social services agency which serves Deaf consumers.

This course provides an overview of Deaf Culture and American Sign Language (ASL) Studies at Cosumnes River College. Topics include an introduction to the field of Deaf culture and ASL, job opportunities, and the skills needed to be successful in the field. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: compile a list of regulations, ethics, certification, and educational requirements needed to enter the Deaf culture and ASL Studies field.
- explain the core interpersonal, intrapersonal, and linguistic competencies required.
- choose a sequencing of coursework to follow in the program at Cosumnes River College.
- SLO 2: demonstrate appropriate cultural interaction within the Deaf community.
- demonstrate ability to communicate respectfully in a Deaf culture setting.

DEAF 310 American Sign Language I
This is the first course in a series of four courses in American Sign Language (ASL). The instructional activities are based on an immersion approach, in which the learners develop language competency in source and target language. The emphasis is on non-speech communication. Topics include grammatical features such as adjective descriptors, differentiation between cardinal/ordinal numbers, contrastive structure, temporal aspect markers and temporal sequencing, conversational skills, narrative skills, and discussions with peers. This course was formerly known as SILA 305.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: ASSEMBLE SHORT SENTENCE DIALOGS WHICH DEMONSTRATE RECEPITIVE AND EXPRESSIVE COMPETENCIES OF TARGETED LEXICAL AND SYNTACTICAL FORMS OF AMERICAN SIGN LANGUAGE.
- compare and contrast the characteristics of the Deaf community and the Deaf community dynamic with the hearing community.
- SLO 2: UTILIZE APPROPRIATE VOCABULARY AND COMMUNICATIVE STRATEGIES USING EYE CONTACT, BODY ORIENTATION, AND SOCIAL BEHAVIORS RELATED TO COMMUNICATION INTERACTION.
- demonstrate appropriate cultural interaction within the Deaf community.
- SLO 3: DEMONSTRATE ABILITY TO COMMUNICATE RESPECTFULLY IN A DEAF CULTURE.

DEAF 311 Fingerspelling, Classifiers and Numbers

This course covers the manual alphabet, numbers and classifiers and is designed to augment expressive and receptive fingerspelling, number and classifiers skills introduced in American Sign Language (ASL) courses. The focus is on skills and perceptual strategies used by students. Emphasis is on recognition of fingerspelling in context. Basic knowledge of American Sign Language is required. It enables the ASL students to develop, expand, and reinforce hands-on experiences with ASL using basic or complex fingerspelling, numbers, and classifiers skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: UTILIZE EXPRESSIVE AND RECEPITIVE FINGERSPELLING STYLE IN AMERICAN SIGN LANGUAGE.
- utilize expressive finger spelling styles easily understood by members in the deaf community through recognition of stylistic goals.
- SLO 2: DEMONSTRATE AN UNDERSTANDING OF AMERICAN SIGN LANGUAGE SYNTAX AND INCREASE PRODUCTION OF ASL CLASSIFIERS, NUMBERS AND FINGERSPELLING.
- demonstrate improved receptive skills achieved through acquisition of strategies for perceiving and utilizing contextual clues, use of phonic, activation of schemata, recognition of repetitive shapes and movements.
- demonstrate increased awareness of ASL syntax.
- SLO 3: DEVELOP KNOWLEDGE AND SKILLS OF ASL CLASSIFIERS AND NUMBERS.
- demonstrate the various classifiers types and function with regards to use of space.
- identify the appropriate classifiers syntax and incorporate classifiers in a variety of discourse style and formats such as dialogs, presentations and storytelling.
- comprehend the rules and usage of numbers.

DEAF 312 American Sign Language II
This is the second in a series of four courses in American Sign Language (ASL). The emphasis is on nonverbal communication. Course topics will be presented in a culturally rich context, providing students with the opportunity to develop an understanding and appreciation for Deaf culture. Topics include grammatical features such as adjective descriptors, differentiation between cardinal/ordinal numbers, contrastive structure, temporal aspect markers and temporal sequencing, conversational skills, narrative skills, and discussions with peers. This course was formerly known as SILA 306.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: PREPARE COMPLEX DIALOGUES THAT DEMONSTRATE RECEPITIVE AND EXPRESSIVE COMPETENCIES OF TARGETED LEXICAL ITEMS FROM SITUATION FROM SITUATIONS OR NARRATIVES THAT OCCUR IN DAILY LIFE ACTIVITIES.
- formulate targeted syntactical forms in ASL in dialogs.
- SLO #2: DEMONSTRATE AN UNDERSTANDING OF THE SOCIAL CUSTOMS AND CULTURAL INTERACTION OF THE VARIOUS GROUPS WITHIN THE DEAF COMMUNITY.
- analyze social customs and cultural interaction of the various groups within the Deaf community.
- SLO #3: DEMONSTRATE AN UNDERSTANDING AND APPRECIATION OF DEAF CULTURE THROUGH APPROPRIATE INTERACTION WITHIN THE DEAF COMMUNITY.
- demonstrate ability to communicate respectfully in a Deaf-culture setting.
- select appropriate vocabulary and communicative strategies in initiating, conducting, and terminating dialogs.

DEAF 314 American Sign Language III

This course is the third in a series of four courses in American Sign Language. It emphasizes expressive and receptive nonverbal communication skills between signers who have preliminary American Sign Language syntactical and lexical skills. It provides an understanding of deaf cultural processes by identifying behaviors and norms from activities assigned in the class. It also includes dialogs that involve asking, empathizing, negotiating and agreeing or disagreeing. The emphasis is on non-speech communication. This course was formerly known as SILA 315.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: APPRAISE AND DEMONSTRATE RECEPITIVE AND EXPRESSIVE SKILLS OF TARGETED FEATURE GRAMMATICAL FEATURES WHICH INCLUDES THE FOLLOWING AREAS: NUMBERS WHEN EXPRESSING TIMES, MONEY, COUNTING, DATES AND ADDRESSES CONCEPTS; FREQUENCY VERBS WHEN EXPRESSING TIME AND DURATION; LOCATIVE CLASSIFIERS WHEN DESCRIBING BUILDINGS FLOOR PLANS; DESCRIPTIVE CLASSIFIERS WHEN ASKED TO DEFINE AND DESCRIBE FURNITURE, CLOTHING, VARIOUS OBJECTS AND FOOD DISHES.
- compare and contrast social norms of Deaf people to those personal cultural experience in signed narratives.
- SLO #2: ANALYZE LEXICAL AND GRAMMATICAL PATTERNS BY SIGNING SELECTED OR SELF-DEVELOPED NARRATIVES.
- demonstrate ability to communicate respectfully in a Deaf-culture setting.
- SLO #3: DEMONSTRATE APPROPRIATE CULTURAL INTERACTION WITHIN THE DEAF COMMUNITY.

DEAF 316 American Sign Language IV
This course is the fourth in a series of four courses in American Sign Language (ASL). It emphasizes expressive communication skills that involve locating and signing interesting facts, making major life decisions, discussing health conditions, and using money. It incorporates information and activities previously learned about Deaf culture into these narratives. The emphasis is on non-speech communication. This course was formerly known as SILA 316.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: APPRAISE AND DEMONSTRATE RECEPTIVE AND EXPRESSIVE MASTERY OF TARGETED GRAMMATICAL MARKERS WHICH INCLUDE: ELABORATIONS IN NARRATIVES, DIALOGS, UTILIZING SIGNS THAT DESCRIBE SPECIFIC FACTS, GENERALIZATIONS, THEORIES, CONCLUSIONS; DESCRIBING MAJOR LIFE DECISIONS; DISCUSSING HEALTH CONDITIONS AND USING MONEY.
  
- formulate previously learned Deaf cultural experiences into narratives.

- SLO #2: APPLY EXPRESSIVE STRATEGIES IN SIGNING LONGER AND MORE COMPLEX NARRATIVES INCLUDING USE OF CHARACTERIZATION AND NARRATIVE STYLES.
  
- compose a lecture in ASL, incorporating complex ideas about health conditions.

- SLO #3: APPRAISE THE FACTS TO EXPLAIN, REPHRASE, DEMONSTRATE, OR DRAW CONCLUSIONS TO CLEARLY PRESENT FACTUAL INFORMATION.
  
- analyze the effectiveness of ASL performance generated by models, self, and peer by applying contemporary theories of performance assessment and peer review.

- compare and contrast Deaf and hearing cultures.

- demonstrate ability to communicate respectfully in a Deaf-culture setting.

- demonstrate appropriate cultural interaction within the Deaf community.

DEAF 351 Introduction to American Deaf Culture

This course is a survey of four institutions which have critical impact on the psycho-social development of Deaf people: family, education, work, and society. It provides awareness and sensitivity to the unique challenges of deafhood and how they influence personal, social and communication competencies of the Deaf person. Selected visits to community events may be required. This course is formerly known as SILA 330.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEFINE CULTURE AND APPLY THE DEFINITION BY USING EXAMPLES OF TYPICAL SOCIAL NORMS OF DEAF PEOPLE.
  
- identify the rules of Social Interaction in the Deaf community.

- SLO 2: DEFINE LANGUAGE AND APPLY THE DEFINITION BY GIVING EXAMPLES BROUGHT OUT FROM EXPERIENCES WITH DEAF PEOPLE.
  
- narrate instances of bias connected to Deaf individuals and groups.

DEAF 352 Introduction to American Deaf Education

This course surveys topics related to educating Deaf children, adults, and individuals with additional disabilities. It also covers teaching methods and philosophies, school placement issues, child development, and methods of addressing developmental and linguistic stages. Selected visits to a residential Deaf school in Fremont and/or a local mainstreaming/Deaf program school may be required. This course was formerly known as SILA 332.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DISTINGUISH AND DESCRIBE ESSENTIAL COMPONENTS OF PUBLIC LAW UNDER SPECIAL EDUCATION/AMERICA DISABILITY ACT (ADA)
- validate an analysis of a topic from a research paper that relates to education of Deaf people.
- to clarify the difference in between the characteristics of school placement sites for Deaf children and for young deaf adults who transition from a high school education to a post-secondary education.
- SLO 2: DISTINGUISH, ASSESS, AND EVALUATE FAMILY DYNAMICS OF DEAF CHILDREN WITH HEARING OR DEAF FAMILIES.
- list and describe the various hereditary syndromes that occur among Deaf children with additional disability conditions.
- SLO 3: CATEGORIZE AND EVALUATE THE RESEARCH DONE ON THE EFFECTIVENESS OF THE COMMUNICATION SYSTEMS USED BY DEAF CHILDREN IN THE EDUCATIONAL SYSTEM.
- distinguish and assess developmental processes of cognitive theory as presented by Piaget and of the development of life stages as presented by Erikson.
- demonstrate appropriate cultural interaction within the Deaf community.
- demonstrate ability to communicate respectfully in a Deaf culture setting.

DEAF 353 Baby Sign Language

This course focuses on Baby Sign Language vocabulary, alphabet, handshape, movement, palm orientation, structure, and grammar. Students will learn core vocabulary, comprehension, and grammar in ASL to understand its structure. Students will also be introduced to the history of the Deaf community and its culture, as well as be exposed to community resources for the Deaf and Hard of Hearing populations. This course was formerly known as SILA 338.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: LEARN AND DEMONSTRATE MANUAL ALPHABET (ASL).
- Understand fingerspelling at a controlled speed, Learn basic ASL vocabulary.
- SLO 2: DEMONSTRATE AN UNDERSTANDING OF CORRECT PALM ORIENTATION AND SIGN MOVEMENT.
- Understand basic ASL grammar and structure in expressive and receptive skills.
- SLO 3: EXPRESS THE BASIC USE OF ASL VOCABULARY TO COMMUNICATE WITH INFANTS AND CHILDREN.
DEAF 354 Creative Signs

Introduction to the techniques of facial expression, characterization, body movement, and specialization as it relates to American Sign Language. Development of expressive sign language skills through the use of poetry, songs, skits, storytelling, jokes and slang signs.

Upon completion of this course, the student will be able to:

- SLO 1: evaluate and analyze a written paper on a related topic to American Sign Language, as well as the development of expressive sign language skills through the use of poetry, songs, skits, storytelling, jokes and slang signs.
- SLO 2: dramatize facial and body language and individual projects.
- Create imaginative sign interpretations of songs, poems, skits, and stories through class participation and demonstrations.
- SLO 3: select appropriate signs for creative uses in the expression of a poem, song, dialogue or story through classroom activity, discussion, role-play and individual demonstrations.
- Translate and accurately demonstrate the expression of a poem, song, dialogue or story from written English into signed American Sign Language.

DEAF 360 Deaf Art

This course introduces Deaf Arts such as drawings, sculptures, artifacts, painting, printmaking and films. We will examine the materials, methods, and design principles of creating Deaf Arts. Local field trips may be required. This course addresses the need and demand of this instruction for global recognition and its social and cultural affects toward Deaf Arts. It promotes global and cultural understanding to the relationship of Deaf Art and the expression of national, regional, socio-economic class, and gender identity.

Upon completion of this course, the student will be able to:

- SLO 1: Identify various transformations of Deaf Art throughout the 1800's to present day.
- SLO 2: Critique the styles of different Deaf artists and recognize the basic differences in each Deaf artist.
- Develop an understanding and knowledge from the perspective of World Deaf Artist.
- SLO 3: Recognize the historical events that transpired during specific Deaf art forms.
- Explain the diversity of Deaf poets and how their artwork is a reflection of their culture and values.

DEAF 380 American Sign Language Literature
This course introduces American Sign Language (ASL) literature genres such as folklore and folktale, storytelling, visual vernacular, personification, classifier story, poetry, ABC and number stories and non-fiction narrative. Topics include analyzing and applying ASL usage in ASL literature genres.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: analyze and critique various genres within ASL literature.
- demonstrate the various techniques and styles of ASL literary works.
- analyze and perform different genres in ASL literature.
- SLO 2: distinguish different ASL tones of poetic works as produced by Deaf authors.
- comprehend literary analysis, significant linguistic and cultural aspects of ASL narratives.
- SLO 3: evaluate the importance of comprehension within literary works in a respectful mannerism pertaining to Deaf culture.
- demonstrate appropriate cultural interaction within the Deaf community.

**DEAF 400 Deaf Culture and ASL Studies Capstone**

This course applies classroom learning to real-world practice in the Deaf community. It includes development of portfolios and digital portfolios from previous work in DEAF courses. Topics also include resume writing and interview skills.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: demonstrate skills that enhance relationships with other employees, consumers, and the employer.
- prioritize continued professional growth objectives.
- complete employment application procedures such as writing resumes and cover letters and interviewing.
- SLO 2: produce Deaf-culture portfolios and ASL digitals portfolios to show work from previous courses.

**DEAF 495 Independent Study**

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

Use information resources to gather discipline-specific information.

SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

Explain the importance of the major discipline of study in the broader picture of society.

SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.
Diagnostic Medical Sonography
| Cosumnes River College

The CRC Diagnostic Medical Sonography (DMS) Program includes didactic, laboratory, and practicum components that are structured to facilitate the achievement of educational and career goals. According to the American Registry for Diagnostic Medical Sonographers (ARDMS), sonographers are “highly-skilled professionals who use specialized equipment to create images of structures inside the human body that are used by physicians to make medical diagnoses.”

Organizations such as the American Registry of Diagnostic Medical Sonographers (ARDMS) certify the competency of sonographers through registration.

The Diagnostic Medical Sonography Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Associate in Science degree, or higher, from a U.S. accredited college;
- a minimum of 800 hours of paid or volunteer patient care experience; hours must be documented within an official volunteer program where they report to a licensed/credentialed health care provider; home health care for a single patient is not acceptable. Applicants will need to document their 800 hours either volunteer, student extern/intern hours, or work hours in direct patient care;
- Complete the application process for enrollment in the DMS program;
- Fulfill all requirements set forth by the CRC Allied Health Practicum Guidelines including but not limited to: background clearance, physical examination, CPR Certification, immunization clearance and drug screening;
- Successfully complete with a B or better all prerequisite courses as outlined below.
  - College-level Intermediate Algebra (or higher math course)
  - Interpersonal Communications (or equivalent communications/speech course)
  - Anatomy & Physiology (one year with lab)
  - Medical Language
  - Human Disease or Pathophysiology
  - Conceptual Physics
- The program prerequisites do not apply to physicians who have an approved foreign transcript evaluation.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- Perform entry-level skills of a diagnostic sonographer in a clinical setting (PSLO #1);
- Successfully complete the American Registry of Diagnostic Medical Sonographers (ARDMS) certification examination (PSLO #2);
- Acknowledge and adhere to the scope of practice of a Diagnostic Medical Sonographer (PSLO #3).

**Career Information**
Career Opportunities: According to the ARDMS, Sonography is a dynamic profession that has grown significantly over the past 25 years. With rapidly developing new technologies and increased use of diagnostic ultrasound procedures, growth is projected to continue in the future with employment opportunities for qualified sonographers in both urban and rural areas nationwide. Sonographers and vascular technologists can choose to work in clinics, hospitals, private-practice physician offices, public-health facilities, laboratories, and other medical settings performing examinations in their areas of specialization. According to the Bureau of Labor Statistics’ Occupational Outlook Website, almost two-thirds of all sonographers are employed by hospitals. The rest work in physicians’ offices, medical and diagnostic laboratories/imaging centers and outpatient care centers. Employment of diagnostic medical sonographers is expected to increase by 29.4 percent, or 1,500 jobs between 2014 and 2024. As ultrasound technology evolves, it will become a more common method used to assist in diagnosing medical conditions, favored over more invasive procedures.

Certificate of Achievement

Diagnostic Medical Sonography Certificate

The CRC Diagnostic Medical Sonography (DMS) Program includes didactic, laboratory, and practicum components that are structured to facilitate the achievement of educational and career goals. According to the American Registry for Diagnostic Medical Sonographers (ARDMS), sonographers are “highly-skilled professionals who use specialized equipment to create images of structures inside the human body that are used by physicians to make medical diagnoses.” Sonographers have extensive, direct patient contact that may include performing some invasive procedures. They must be able to interact compassionately and effectively with people who range from healthy to critically ill.

Students must achieve a "C" or better in all SONOG didactic courses and a "Pass" in all practicum courses to remain in, and progress through, the DMS program. Students who do not achieve these minimum expectations will be dismissed from the program.

Organizations such as the American Registry of Diagnostic Medical Sonographers (ARDMS) certify the competency of sonographers through registration.

Diagnostic Medical Sonography (SONOG)

SONOG 200 Introduction to Sonography

This course is designed for students in the Diagnostic Medical Sonography (DMS) program. The course will introduce fundamental sonography theory including terminology and equipment. Students will be instructed in sonographer and patient safety, including ergonomics, legal, ethical and regulatory issues. Scope of practice, patient care techniques, assessment and treatment will be introduced. Emphasis will be placed on interaction with diverse patient populations. This course must be taken for a letter grade, and students must achieve a "C" or better to remain in the DMS program.

Upon completion of this course, the student will be able to:

- Complete the application process for enrollment in the DMS program;
- Fulfill all requirements set forth by the CRC Allied Health Practicum Guidelines including but not limited to: background clearance, physical examination, CPR Certification, immunization clearance and drug screening;
- Successfully complete with a B or better all pre-require course as outlined below within the last five (5) years:
  - College-level Intermediate Algebra (or higher math course)
  - Interpersonal Communications (or equivalent communications/speech course)
  - Anatomy & Physiology (one year with lab)
  - Medical Language
  - Human Disease or Pathophysiology
  - Conceptual Physics
- The program prerequisites do not apply to physicians who have an approved foreign transcript evaluation.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Perform entry-level skills of a diagnostic sonographer in a clinical setting (PSLO #1);
- Successfully complete the American Registry of Diagnostic Medical Sonographers (ARDMS) certification examination (PSLO #2);
- Acknowledge and adhere to the scope of practice of a diagnostic medical sonographer (PSLO #3).

SONOG 200 Introduction to Sonography

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Corequisite: | SONOG 202 |
| Enrollment Limitation: | This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of "C" or better in this course to remain in the DMS program. |
| Catalog Date: | June 1, 2020 |

This course is designed for students in the Diagnostic Medical Sonography (DMS) program. The course will introduce fundamental sonography theory including terminology and equipment. Students will be instructed in sonographer and patient safety, including ergonomics, legal, ethical and regulatory issues. Scope of practice, patient care techniques, assessment and treatment will be introduced. Emphasis will be placed on interaction with diverse patient populations. This course must be taken for a letter grade, and students must achieve a "C" or better to remain in the DMS program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- IDENTIFY SAFETY ISSUES INVOLVED IN THE FIELD OF SONOGRAPHY - SLO #1
Demonstrate correct ergonomic techniques while performing various scanning tests.
Discuss legal and bioethical situations inherent in the field of medicine, as well as specific to the sonography occupation.
Relate various techniques to ensure patient safety during scanning tests.
DISCUSS THE FIELD OF SONOGRAPHY INCLUDING THE ROLE OF THE SONOGRAPHER IN THE HEALTHCARE TEAM - SLO #2
Use correct sonography terminology, including spelling and pronunciation.
Relate the relationship between the sonographer and other various healthcare team members e.g. physicians, radiologists and patients.
Determine if the field of sonography is the correct occupational choice.
Identify scope of practice parameters for the sonographer
IDENTIFY BASIC PATIENT CARE TECHNIQUES, INCLUDING SCANNING, ASSESSMENTS AND TREATMENTS - SLO #3
Display professionalism and cultural awareness when working with diverse patient populations.
Choose proper scanning techniques given specific patient parameters.

SONOG 202 Sectional Anatomy for Medical Imaging

**Units:** 3
**Hours:** 54 hours LEC
**Prerequisite:** None.
**Corequisite:** SONOG 200
**Enrollment Limitation:** This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of “C” or better in this course to remain in the DMS program.
**Catalog Date:** June 1, 2020

This is an introductory course in cross-sectional anatomy. Basic principles of human anatomy are presented in cross section and multi-planes and applied to Sonographic images, along with comparison modalities in the diagnostic imaging fields. This course builds upon basic understanding of human anatomy and physiology as it relates specifically to diagnostic imaging in an integrated fashion. This course provides critical cross-sectional analysis of human anatomy in preparation for abdominal, pelvic, vascular and small parts scanning, including sonographic terminology and directional anatomy in the cross-sectional planes. This course is only available to students who have been accepted in to the CRC Diagnostic Medical Sonography program. This course must be taken for a letter grade, and students must achieve a "C" or better to remain in the DMS program.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: EXPLAIN THE BASIC CROSS-SECTIONAL PLANES BY DEFINING AND IDENTIFYING 3D ANATOMY FROM 2D IMAGES, COMPARING STRUCTURES TO MULTIPLE IMAGING MODALITIES
  - demonstrate knowledge of basic directional imaging terminology
  - apply knowledge of a single plane image to describe multiple plane anatomical structures
  - illustrate and identify structures and organs with labels in cross-sectional planes from diagnostic images
  - compare and contrast the differences of the same organ planes on CT, MRI and sonographic images
  - demonstrate spatial relationship skills using drawings to explain relationships to different sonographic planes
- SLO 2: DEMONSTRATE A FUNDAMENTAL UNDERSTANDING OF CROSS-SECTIONAL ANATOMIC PLANES COMPARED TO NORMAL VARIATIONS
  - describe structures in anatomical terms specifically used in medical imaging and diagnostic medical sonography
  - compare and contrast positive and negative uses of anatomical structures demonstrated on CT and MRI vs sonographic images
  - explain the proper protocols and use of sonographic images compared to other imaging modalities
  - assess the impact of anatomical pathologies and how it effects adjacent normal organs
- SLO 3: IDENTIFY ANATOMICAL STRUCTURES WITHIN ORGANS AND IN RELATIONSHIP TO SURROUNDING ORGANS
  - utilize proper sonographic terms to describe cross sectional images
  - demonstrate the ability to verbally explain and critique anatomy on images
• compare CT and MRI images to sonographic images for sectional anatomy of major organs
• integrate in-class experiences to apply knowledge of specific cross sectional images in human anatomy
• SLO 4: DETERMINE GENERAL EFFECT OF LAYERING ANATOMY BASED ON ANATOMICAL OBSERVATIONS
• analyze structural distinctions and apply concepts of oblique images and orthogonal planes
• determine adjacent structures from a single plane and analyze for reconstruction to describe the 3D organ

SONOG 205 Ultrasound Physics & Instrumentation

Units: 3
Hours: 54 hours LEC
Prerequisite: SONOG 202 with a grade of “C” or better
Corequisite: SONOG 210 and 240
Enrollment Limitation: This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of “C” or better in this course to remain in the DMS program.
Catalog Date: June 1, 2020

This course covers the basic principles of diagnostic ultrasound physics and instrumentation. Topics include acoustical physics, Doppler effect, color flow imaging and the effects of ultrasound waves on human tissue. The course will cover transducer designs, quality assurance, bio-effects and imaging artifacts. The fundamentals of instrumentation, equipment design and application will be included. Hands-on instruction may be provided to introduce the student to necessary elementary scanning skills. This course is available to students who have been accepted in to the DMS program. This course must be taken for a letter grade, and students must achieve a “C” or better to remain in the DMS program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• ASSESS THE EFFECTS OF ULTRASOUND WAVES ON HUMAN TISSUE - SLO #1
  Explain the Doppler Effect and how it is used in the assessment of blood flow velocity in both continuous and pulsed wave Doppler.
  Determine the effects of acoustic waves on tissue and its application to organ structural analysis.

• EVALUATE THE QUALITY OF AN ULTRASOUND SCAN TO ENSURE ACCURATE RESULTS - SLO #2
  Employ quality assurance measures while working with ultrasound equipment to decrease the risk of imaging artifacts.
  Determine how the various transducer designs that are currently available relate to quality assurance.
  Identify processes the sonographer can employ to decrease the biological effects on tissue while performing scans.

• DISCUSS THE FUNDAMENTALS OF ULTRASOUND EQUIPMENT - SLO #3
  Compare and contrast the various sonography equipment designs currently available.
  Demonstrate correct usage of basic sonography instrumentation.
  Assess the various applications of sonography in healthcare.

SONOG 210 Abdominal Scanning and Pathology

Units: 4
Hours: 36 hours LEC; 108 hours LAB
Prerequisite: SONOG 202 with a grade of “C” or better
Corequisite: SONOG 205 and 240
Enrollment Limitation: This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of “C” or better in this course to remain in the DMS program.
Catalog Date: June 1, 2020
This course will provide a study of the clinical applications of abdominal sonography, including positioning and scanning protocol. Anatomical structures will include: abdominal vasculature; liver; gallbladder and biliary system; pancreas; spleen; and kidneys. Specific pathology and clinical symptomatology will be covered as they relate to the sonographic appearance of these structures. Interpretation and critique of normal and abnormal anatomy with correlation of clinical, didactic and image information will be presented. This course is available to students who have been accepted into the DMS program. This course must be taken for a letter grade, and students must achieve a “C” or better to remain in the DMS program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- EVALUATE ABDOMINAL SCANS IN ORDER TO ASSESS NORMAL AND ABNORMAL STRUCTURES - SLO #1
- Identify relevant abdominal structures as to their shape, location and size on a scan.
- Compare scanned images for normal and abnormal abdominal structures.
- RELATE CLINICAL SYMPTOMATOLOGY TO POTENTIAL ABDOMINAL ABNORMALITIES - SLO #2
- Determine which abdominal structures to scan based on patient symptoms and clinical history.
- Demonstrate correct scanning technique for specific abdominal conditions and ordered tests, including patient positioning.

SONOG 215 Clinical Experience I

Units: 7
Hours: 384 hours LAB
Prerequisite: SONOG 210 with a grade of “C” or better
Corequisite: SONOG 220
Enrollment Limitation: This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. This course is graded “P/NP”, and students must earn a grade of “P” in this course to remain in the DMS program. Enrollment in all clinical experience courses requires all of the following: 1) successful completion of the ARDMS Sonography Principles & Instrumentation (SPI) exam; 2) must have obtained an approved clinical placement assigned by the CRC DMS program coordinator; and 3) must be enrolled in all co-requisite courses.
Catalog Date: June 1, 2020

This course will provide basic instruction and scanning experience in sonography in a hospital or other healthcare setting. The student will learn to demonstrate the ability to perform basic sonographic examinations according to the protocols established by the program and healthcare facility utilizing sonographic equipment. The directed practice experience will also serve to familiarize the student with the hospital setting, sonography department and other related clinical training aspects including Health Insurance Portability and Accountability Act (HIPAA) law. This course is only available to students who currently enrolled in the DMS program and have met the pre-requisites, co-requisites and have met all enrollment limitations. This course is graded as “Pass/No Pass”, and students must achieve a “Pass” to remain in the DMS program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- APPLY SCANNING THEORY AND PRACTICAL SKILLS IN A HEALTHCARE SETTING - SLO #1
- Perform scans under the supervision of a licensed sonographer in a hospital or other healthcare setting.
- Demonstrate proper patient positioning, moving and lifting techniques with concern for patient safety and modesty during scanning procedures.
- Maintain an ongoing record of cases participated in or observed during clinical rotation.
- DEMONstrate PROPER PROFESSIONAL BEHAVIOR IN THE CLINICAL SETTING - SLO #2
- Relate HIPAA regulations as they relate to sonography.
- Adhere to the Diagnostic Medical Sonographer scope of practice.
- Adhere to the program protocol and hospital policies set forth prior to clinical rotations with respect to professional and ethical behavior.

SONOG 220 OB/GYN Scanning & Pathology
This course will cover the anatomy and pathology related to the sonography of the female reproductive system, pregnant and non-pregnant. It will include an assessment of fetal gestational age, fetal anatomy and pathology, as well as associated maternal conditions throughout all trimesters. Topics of discussion include related clinical symptoms, sonographic appearances, scanning techniques and protocols. This course is available to students who have been accepted into the most recent DMS cohort. This course must be taken for a letter grade, and students must achieve a "C" or better to remain in the DMS program.

Upon completion of this course, the student will be able to:

- **IDENTIFY FEMALE REPRODUCTIVE AND FETAL STRUCTURES ON A SONOGRAPHIC IMAGE - SLO #1**
  - Locate relevant normal and abnormal structures of the female reproductive system in both pregnant and non-pregnant patients, including the breast.
  - Assess fetal gestational age, fetal anatomy, placenta, umbilical cord, and amniotic fluid on a scanned image.

- **DEMONSTRATE CORRECT OB/GYN SCANNING TECHNIQUES - SLO #2**
  - Determine appropriate technique including patient positioning based on maternal and/or fetal conditions, pathological processes and protocols.
  - Compare transabdominal and transvaginal preparation and scanning and determine appropriateness of each.
  - Relate clinical symptomotology to potential OB/GYN abnormalities and choose appropriate scanning technique

### SONOG 225 Clinical Experience II

This course will provide intermediate-level instruction and scanning experience in a hospital or other healthcare setting. The student will be able to demonstrate the ability to perform abdominal, OB/GYN and small parts sonographic examinations of patients according to the protocols established by the program and healthcare facility utilizing sonographic equipment. This course is available to students who have been accepted into the most recent DMS cohort. This course is graded "Pass/No Pass", and students must earn a grade of "P" in this course to remain in the DMS program. Enrollment in all clinical experience courses requires all of the following: 1) successful completion of the ARDMS Sonography Principles & Instrumentation (SPI) exam; 2) must have obtained an approved clinical placement assigned by the CRC DMS program coordinator; and 3) must be enrolled in all co-requisite courses.

Upon completion of this course, the student will be able to:

- **APPLY SONOGRAPHY THEORY AND PRACTICAL SKILLS IN A HEALTHCARE SETTING - SLO #1**
  - Perform intermediate-level scans under the supervision of a licensed sonographer in a hospital or other healthcare setting.
  - Demonstrate proper patient positioning, moving and lifting techniques with concern for patient safety and modesty during scanning procedures.
  - Maintain an ongoing record of cases participated in or observed during clinical rotation.

- **DEMONSTRATE PROPER PROFESSIONAL BEHAVIOR IN THE CLINICAL SETTING - SLO #2**
  - Describe HIPAA regulations as they relate to sonography.
  - Adhere to the Diagnostic Medical Sonographer scope of practice.
• Adhere to the program protocol and hospital policies set forth prior to clinical rotations with respect to professional and ethical behavior.

SONOG 228 Advanced OB/GYN Pathology

Units: 2
Hours: 36 hours LEC
Prerequisite: SONOG 220 with a grade of "C" or better
Enrollment Limitation: This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of "C" or better in this course to remain in the DMS program.
Catalog Date: June 1, 2020

This course builds upon lessons from SONOG 220 covering OB/GYN pathology and maternal-fetal complications. This course covers High Risk Obstetrics in Sonography, Fetal Structural Abnormalities, Genetic Abnormalities and Syndromes. This course will also cover clinical assessments including interventional procedures and post-partum complications as well as pathology involving infertility. Topics of discussion include related clinical symptoms, sonographic appearances, scanning techniques and protocols. This course is available to students who have been accepted in to the most recent DMS cohort. This course must be taken for a letter grade, and students must achieve a "C" or better to remain in the DMS program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• IDENTIFY ABNORMAL FEMALE REPRODUCTIVE AND FETAL ANOMALIES ON SONOGRAPHIC IMAGES - SLO #1
  - Locate relevant normal structures and identify abnormal structures of the female reproductive system in both pregnant and non-pregnant patients.
  - Assess fetal gestational age to determine abnormal growth patterns including IUGR, fetal anomalies, placental defects and anomalies. Associated umbilical cord, amniotic fluid assessments and biophysical profiles associated with anomalies and sequential amniotic fluid assessment in the high risk pregnancy

• DEMONSTRATE FETAL ANOMALIES AND GYNECOLOGIC DISEASES USING CLINICAL ASSESSMENT TOOLS. SLO #2

• ANALYZE AND SYNTHESIZE MULTIPLE SOURCES OF INFORMATION TO ENSURE ALL REQUIRED IMAGES OF ABNORMALITIES ARE RECORDED AND INCLUDED IN THE TECHNICAL IMPRESSION. SLO#3
  - Determine appropriate technique including patient positioning based on maternal and/or fetal conditions, pathological processes and protocols.
  - Compare transabdominal and transvaginal preparation and scanning and determine appropriateness of each.
  - Relate clinical symptomatology to potential OB/GYN abnormalities and choose appropriate scanning technique making proper adjustments during the examination

SONOG 230 Vascular Scanning

Units: 4
Hours: 36 hours LEC; 108 hours LAB
Prerequisite: SONOG 225 with a grade of "C" or better
Corequisite: SONOG 235
Enrollment Limitation: This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of "C" or better in this course to remain in the DMS program.
Catalog Date: June 1, 2020

This course covers the basic positioning and scanning protocol of the vascular system. Terminology specific to the hemodynamics of the arterial, venous and cerebrovascular applications will be presented. Normal, abnormal and pathologic states of the vascular system, including the carotid and lower extremities, will be included. This course is available to students who have been accepted in to the most recent DMS cohort. This course must be taken for a letter grade, and students must achieve a "C" or better to remain in the DMS program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• EVALUATE VASCULAR SCANS TO ASSESS NORMAL AND ABNORMAL STRUCTURES AND VASCULAR FLOW - SLO #1
  - Identify relevant vascular structures of the neck, pelvis, abdominal cavity and extremities.
- Compare vascular scanned images for normal and abnormal vascular flow and/or structural abnormalities.

- RELATE SYMPTOMATOLOGY TO POTENTIAL ABNORMALITIES AND/OR PATHOLOGY OF THE VASCULAR SYSTEM - SLO #2

- Demonstrate correct non-invasive vascular scanning technique, including patient positioning.

- Demonstrate knowledge of signals produced by arterial blood flow in both visual and auditory presentation.

- Determine the specific vascular area and/or structures to scan based on patient clinical history.

**SONOG 235 Clinical Experience III**

| Units: | 9 |
| Hours: | 512 hours LAB |
| Prerequisite: | SONOG 228 with a grade of “C” or better |
| Corequisite: | SONOG 230 |
| Enrollment Limitation: | This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. This course is graded “P/NP”, and students must earn a grade of “P” in this course to remain in the DMS program. Enrollment in all clinical experience courses requires all of the following: 1) successful completion of the ARDMS Sonography Principles & Instrumentation (SPI) exam; 2) must have obtained an approved clinical placement assigned by the CRC DMS program coordinator; and 3) must be enrolled in all co-requisite courses. |
| Catalog Date: | June 1, 2020 |

This course will provide intermediate/advanced-level instruction, supervision and scanning experience in a hospital or other healthcare setting. The student will be able to demonstrate the ability to perform abdominal, OB/GYN, small parts and/or vascular sonographic examinations of patients according to the protocols established by the program and healthcare facility utilizing sonographic equipment. This course is available to students who have been accepted in to the most recent DMS cohort. This course is graded “Pass/No Pass”, and students must achieve a “Pass” to remain in the DMS program.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- APPLY SCANNING THEORY AND PRACTICAL SKILLS IN A HEALTHCARE SETTING - SLO #1

- Perform abdominal, OB/GYN, vascular, superficial and/or small parts scans under the supervision of a licensed sonographer in a hospital or other healthcare setting.

- Demonstrate proper patient positioning, moving and lifting techniques with concern for patient safety and modesty during scanning procedures.

- Maintain an ongoing record of cases participated in or observed during clinical rotations.

- DEMONSTRATE PROPER PROFESSIONAL BEHAVIOR IN THE CLINICAL SETTING - SLO #2

- Relate HIPAA regulations as they relate to scanning.

- Adhere to the Diagnostic Medical Sonographer scope of practice.

- Adhere to the program protocols and hospital policies set forth prior to clinical rotations with respect to professional and ethical behavior.

**SONOG 240 Superficial & Small Parts Scanning**

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Prerequisite: | SONOG 202 with a grade of “C” or better |
| Corequisite: | SONOG 210 |
| Enrollment Limitation: | This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of “C” or better in this course to remain in the DMS program. |
| Catalog Date: | June 1, 2020 |

This course covers the basic positioning and scanning of pediatric, small part and superficial structures; related anatomy and pathology; clinical symptomatology and how they relate to the sonographic appearance. Interpretation of normal and abnormal anatomy with correlation of clinical information will also be presented. This course is available to students who have been accepted in to the most recent DMS cohort. This course must be taken for a letter grade, and students must achieve a “C” or better to remain in the DMS program.
Upon completion of this course, the student will be able to:

- EVALUATE SUPERFICIAL STRUCTURE SCANS IN ORDER TO ASSESS NORMAL AND ABNORMAL ANATOMY - SLO #1
  
  Identify relevant superficial and small part structures as to their shape, location and size to include the extremities, digits, testes, thyroid and neck.

- Compare scanned images for normal and abnormal superficial and small part structures

- RELATE CLINICAL SYMPTOMATOLOGY TO POTENTIAL ABNORMALITIES AND/OR PATHOLOGY - SLO #2
  
  Demonstrate correct scanning technique of superficial or small part structures, including patient positioning.

- Determine the specific structure or area to scan based on patient symptoms and clinical history.

- EVALUATE PEDIATRIC SCANS TO ASSESS NORMAL AND ABNORMAL ANATOMY - SLO #3
  
  Demonstrate correct scanning technique of pediatric patients, including positioning.

- Determine the specific structure or area to scan based on patient symptoms and clinical history.

- Compare scanned images for normal and abnormal pediatric structures

**SONOG 250 Sonography Interpretation & ARDMS/ARRT Exam Review**

- **Units:** 2
- **Hours:** 18 hours LEC; 54 hours LAB
- **Prerequisite:** SONOG 235 with a grade of "C" or better
- **Enrollment Limitation:** This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. Students must take this course for a letter grade, and must earn a grade of "C" or better in this course to remain in the DMS program.
- **Catalog Date:** June 1, 2020

This course will cover advanced interpretation and critique of abdominal, OB/GYN, vascular, superficial and small parts sonographs. This course serves as a continuation of previous, basic knowledge within the Diagnostic Medical Sonography program. This course will also provide students with guidance to assist them in their independent study and preparation for the ARDMS and AART examinations. This course is available to students who have been accepted into the most recent DMS cohort. This course must be taken for a letter grade, and students must achieve a "C" or better to remain in the DMS program.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- CRITIQUE AND INTERPRET NORMAL AND ABNORMAL SONOGRAPHIC IMAGES - SLO #1
  
  Analyze scanned images to interpret results as either normal or abnormal, to include the following areas: abdominopelvic cavity, OB/GYN, vascular, superficial and small parts structures.

- Critique scanned images for quality and accuracy based on patient clinical history.

**SONOG 255 Clinical Experience IV**

- **Units:** 9
- **Hours:** 512 hours LAB
- **Prerequisite:** SONOG 235 with a grade of "C" or better
- **Corequisite:** SONOG 250
- **Enrollment Limitation:** This course is only available to students who have been accepted into the most recent cohort and who remain in good standing within the DMS program. This course is graded "P/NP", and students must earn a grade of "P" in this course to remain in the DMS program. Enrollment in all clinical experience courses requires all of the following: 1) successful completion of the ARDMS Sonography Principles & Instrumentation (SPI) exam; 2) must have obtained an approved clinical placement assigned by the CRC DMS program coordinator; and 3) must be enrolled in all co-requisite courses.
- **Catalog Date:** June 1, 2020
This course is the final directed practice study course in the Diagnostic Medical Sonography program. The course incorporates all areas of study including the abdomen, OB/GYN, vascular, superficial and small parts scanning. The student will be able to perform advanced sonographic examinations in a healthcare facility according to the protocols and criteria established by the CRC DMS program. Students will complete all final program competency evaluations and demonstrate the ability to perform all required examinations, including the ability to scan independently, under the direction of the assigned primary clinical site preceptor(s). This course is graded “Pass/No Pass”, and students must achieve a “Pass” to remain in the DMS program.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **APPLY PREVIOUSLY LEARNED MATERIAL IN THE PERFORMANCE OF PATIENT ULTRASOUND EXAMINATIONS - SLO #1**
  - Utilize content knowledge and practical skills learned from previous sonography courses.
  - Perform advanced sonographic examinations in the following areas: abdominopelvic, vascular, OB/GYN, superficial and small parts.

- **DEMONSTRATE PROPER PROFESSIONAL BEHAVIOR IN THE CLINICAL SETTING - SLO #2**
  - Adhere to the Diagnostic Medical Sonographer scope of practice.
  - Adhere to the CRC DMS program protocol and clinical facility policy set forth prior to clinical rotations.
Digital Media | Cosumnes River College

This two-year instructional program is designed to provide skills for industry and for degree or transfer. This option can lead to entry-level jobs in television, Cable TV, business or industrial video and graphics, animation, or digital media for broadcast, CD/DVD production and the Internet.

Dean

 (916) 691-7170
 BedforB@crc.losrios.edu

Associate Degree

A.A. in Digital Media

This two-year instructional program is designed to provide skills for industry and for degree or transfer. This option can lead to entry-level jobs in television, Cable TV, business or industrial video and graphics, animation, or digital media for broadcast, CD/DVD production and the Internet.

Highlights include:
* Practical experience working with contemporary computer software
* State of the art computer lab for graphics and nonlinear editing, including Final Cut Pro Studio, Photoshop, Illustrator, and After Effects
* Internship opportunities working with local television stations, independent film companies and post-production editing facilities

Note to Transfer Students:
If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

Catalog Date: June 1, 2020

The Digital Media Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Write in clear, concise English. (PSLO-1)
- Create traditional media, print and digital media projects that demonstrate effective use of established design principles for typography, color, images, animation, sound and video (PSLO-2)
- Demonstrate a conceptual foundation in new media technology. (PSLO-3)
- Articulate and apply the basic principles and processes used in traditional and digital graphic and multimedia design. (PSLO-4)
- Demonstrate a conceptual foundation in the ethics of new media technology. (PSLO-5)
- Examine and critique media products utilizing general information and concepts in new media. (PSLO-6)

Career Information

Career Options: Nonlinear Video Editor, DVD Author, Computer Graphic Artist, Animation Artist, Producer/Director for Broadcast, Personal or Corporate Video and the Internet. Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.

Certificate of Achievement

Digital Media Certificate

This instructional program is designed to provide skills for industry. This option can lead to entry-level jobs in television, Cable TV, business or industrial video and graphics, animation, or digital media for broadcast, CD/DVD production and the Internet.

Highlights include:
* Practical experience working with contemporary computer software
* State of the art computer lab for graphics and nonlinear editing, including Photoshop, Illustrator, After Effects, Final Cut Pro, Lightwave 3D
* Internship opportunities working with local television stations, independent film companies and post-production editing facilities

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Create digital media projects that incorporate art theory, digital design and development, digital audio and non-linear digital video. (PSLO-1)
- Examine and critique media products utilizing general information and concepts in new media. (PSLO-2)
- Demonstrate a conceptual foundation in the ethics of new media technology. (PSLO-3)
- Demonstrate skills required for a vast array of digital media careers including web design and development, multimedia production, digital video production and corporate communications. (PSLO-4)

Career Information

Career Options: Nonlinear Video Editor, Computer Graphic Artist, Animation Artist, Personal or Corporate Video Producer/Director.

Some career options may require more than two years of college study. Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.
Early Childhood Education
| Cosumnes River College

The Early Childhood Education A.A. degrees and certificates offer an interactive approach to acquiring the knowledge, skills, and dispositions necessary to work with young children, birth to 12 years old. Students are guided by experienced and qualified faculty in an in-depth study of the theories, principles and practices of early childhood, and child development.

The Early Childhood Education department strives to bring innovative research-based, current information and knowledge to students. Reflective practices and opportunities to practice critical thinking skills are woven into all coursework. Emphasis is placed on developing professional and ethical dispositions that foster positive relationships among children, families, and colleagues. Additionally, students are immersed in practices inclusive of all children; including children who are culturally and linguistically diverse and children with special needs.

The Early Childhood Education department believes in the importance of promoting an engaging, intellectually challenging, and creative learning environment. The Early Childhood Education's philosophy is sustained through the Early Childhood Education Pathways to Success program. This program promotes a student centered, strength-based approach to foster the professional disposition to be a successful student and lifelong learner.

The Early Childhood Education Program is aligned to the Child Development and Early Childhood Education majors offered by several California State Universities and the Curriculum Alignment Project (CAP) which align early childhood programs across California Community Colleges. Coursework fulfills the California Commission on Teacher Credentialing (CCTC) fulfill requirements leading to Child Development Permits and early childhood units needed to work as a Transitional Kindergarten Teacher.

Associate Degrees for Transfer

A.S.-T. in Early Childhood Education for Transfer

The Associate in Arts in Early Childhood Education (ECE) for Transfer Degree (AS-T) provides a clearly articulated curricular pathway for students who wish to pursue a degree option in the California State University (CSU) system. The degree is designed to serve the diverse needs of students interested in the breadth and depth of the field of early childhood education. Additionally, this degree exposes students to the core principles and practices of the field in order to build a foundation for their future personal, academic, or vocational paths.

The Associate in Science in ECE for Transfer Degree provides students with a major that fulfills the general requirements of the California State University for transfer. Upon successful completion of the degree requirements, students will be guaranteed admission to the CSU system with junior status and will not have to repeat lower division coursework. Students are encouraged to meet with a counselor to develop their educational plans as degree options and general education requirements vary for each university.

The Associate in Science in Early Childhood Education (ECE) for Transfer Degree may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) the Intersegmental General Education Transfer Curriculum (IGETC). The ECE courses required in this program are part of the CA Curriculum Alignment Project.

The Associate in Science in Early Childhood Education for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- Synthesize child development research with principles and practices for early childhood teaching to create early learning environments that are respectful, supportive, and challenging for all children, from infancy through adolescence. (PSLO 1)
- Design inclusive, culturally and linguistically appropriate learning environments, based on child development, child observations, family information and knowledge of culturally diverse child rearing practices. (PSLO 2)
- Incorporate strategies for building respectful, reciprocal family and community relationships in order to support families with their children's development and learning. (PSLO 3)
- Assess children's learning through observation, documentation, and interpretation, using results to guide curriculum and teaching strategies. (PSLO 4)
- Recommend developmentally appropriate and culturally relevant approaches to teaching and learning that include respectful, supportive relationships with children and families, and curriculum that support foundational skills and concepts in language, math, science, art, and social relationships. (PSLO 5)
- Demonstrate practices that maintain standards of health, nutrition, and safety in-group care early childhood settings. (PSLO 6)
- Apply ethical standards of behavior accepted by the profession of early childhood education. (PSLO 7)
- Appraise knowledge of public policy and legislative issues concerning children and their families. (PSLO 8)

**Career Information**

The Associate in Science in Early Childhood Education transfer degree was designed to facilitate students' successful transfer to certain California State University (CSU) campuses that prepares them for advanced study in a variety of baccalaureate degree programs including teaching, child development specialist, program director, and child life specialist. With a baccalaureate degree in ECE/Child Development, students are eligible for the master teacher and site supervisor levels of the CA child development permit, using the alternative qualifications category. Students who are planning to obtain an associate degree and not continue to a baccalaureate program are advised to complete the Early Childhood Education AA degree rather than this AS-T. The AA degree provides a comprehensive foundation for in-depth early childhood teacher preparation necessary for those seeking employment after completion of the degree. NOTE TO TRANSFER STUDENTS: The Associate in Science in Early Childhood Education for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as "double-counting"). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions; it is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

**Associate Degrees**

A.A. in Early Childhood Education, Site Supervisor
Administration of early care and education programs is the main focus of this degree. Topics include administration, supervision and coordination of staff in early childhood settings. Additionally, it provides the educational coursework that serves as the core curriculum for the early childhood education field. Along with documented experience, this certificate leads to the Site Supervisor Permit issued by the California Commission on Teacher Credentialing and is required of those individuals supervising a publicly funded early childhood education site.

**Total Units:** 43

The Early Childhood Education, Site Supervisor Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:
- PSLO 1: (Development and Learning) Analyze and synthesize research and theories to support development and learning. Evaluate and implement developmentally appropriate and culturally relevant approaches to teaching and learning which support the whole child including foundational skills and concepts in language and literacy, math, science, art, health and wellness, and social relationships.

- PSLO 2: (Equity and Cultural Sustainability) Construct knowledge based on the principles of anti-bias education in order to design environments that promote justice, equity and inclusion for all children, families, and communities.

- PSLO 3: (Professionalism) Develop competencies, professional skills, and plans for professional growth. Integrate reflective practices to support professional growth as an Early Childhood professional. Understand and integrate the NAEYC Code of Ethics to support children, families, and other educators.

- PSLO 4: (Observation, Documentation and Assessment) Utilize authentic assessment strategies based on observation, reflection, documentation, and interpretation of children's development to inform teaching practices.

- PSLO 5: (Family Engagement) Incorporate strategies for building respectful and reciprocal relationships with families, children and the community in order to support children's development and learning. Develop knowledge and skills to provide a responsive curriculum and learning environment that reflects the children and the families in the program.

- PSLO 6: (Leadership) Understanding and commitment to leadership development that empowers, encourages, cultivates, and supports self and others to become agents of change and advocate for high-quality early care and education experiences for all children, support for families, and professional stature of educators.

Career Information

Upon completion of this certificate, the student exceeds the minimum requirements to work as a director/site supervisor in a privately funded early care and education program. With documented experience supervising staff, the student also meets the requirements to work as a director/site supervisor in a publicly funded early care and education program.

A.A. in Early Childhood Education

This program provides a comprehensive foundation for in-depth early childhood teacher preparation both through strong general education and principles and practices in child development and in early childhood curriculum and pedagogy. Topics include an introduction to the profession, observation techniques, age-appropriate curriculum, the child in the context of family and culture, and health and safety practices for early childhood educators.

Note to Transfer Students:

If you are interested in transferring to a four-year college or university to pursue a Bachelor’s degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate’s degree in this major may be different from the requirements needed for the Bachelor’s degree.

Career Information

Upon completion of the A.A. degree, a student possesses the course work required to work as a teacher in both private and public early care and education settings, serving infants through preschool-age children. Additionally, the individual can work as a teacher in before-and-after school programs, serving school-age children.

Certificates of Achievement

Early Childhood Education - Master Teacher Certificate

This certificate meets the requirements for teaching in a publicly funded early care and education program. It requires an additional 6 units of specialized study beyond the teacher level certificate, allowing the student to select a particular focus of study (i.e., infant/toddler; culture and diversity; health and nutrition; children's literature; and art or music for young children). Applicants must verify required experience teaching children and supervising staff to be recommended to the California Commission on Teacher Credentialing for issuance of the Master Teacher Child Development Permit.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **PSLO 1:** (Development and Learning) Analyze and synthesize research and theories to support development and learning. Evaluate and implement developmentally appropriate and culturally relevant approaches to teaching and learning which support the whole child including foundational skills and concepts in language and literacy, math, science, art, health and wellness, and social relationships.

- **PSLO 2:** (Equity and Cultural Sustainability) Construct knowledge based on the principles of anti-bias education in order to design environments that promote justice, equity and inclusion for all children, families, and communities.

- **PSLO 3:** (Professionalism) Develop competencies, professional skills, and plans for professional growth. Integrate reflective practices to support professional growth as an Early Childhood professional. Understand and integrate the NAEYC Code of Ethics to support children, families, and other educators.

- **PSLO 4:** (Observation, Documentation and Assessment) Utilize authentic assessment strategies based on observation, reflection, documentation, and interpretation of children's development to inform teaching practices.
- PSLO 5: (Family Engagement) Incorporate strategies for building respectful and reciprocal relationships with families, children and the community in order to support children's development and learning. Develop knowledge and skills to provide a responsive curriculum and learning environment that reflects the children and the families in the program.

- PSLO 6: (Leadership) Understanding and commitment to leadership development that empowers, encourages, cultivates, and supports self and others to become agents of change and advocate for high-quality early care and education experiences for all children, support for families, and professional stature of educators.

Career Information

This certificate qualifies students to be a master teacher or a supervising teacher in early care and education programs. Upon completion of this certificate and with documented related experience, the individual is eligible to be a lead teacher and/or mentor teacher in both publicly and privately funded programs serving young children and their families. Some career options may require more than two years of college study. Meet with a counselor and an ECE faculty to determine these options.

Early Childhood Education - Teacher Certificate

This certificate provides a foundation for in-depth early childhood teacher preparation both through general education and through introductory studies in child development and in early childhood curriculum and pedagogy. Additionally, it covers culture and diversity issues in early childhood and health and safety practices. Students must verify required teaching experience to be recommended to the Commission on Teacher Credentialing for issuance of the Teacher Child Development Permit.

Understand and integrate the NAEYC Code of Ethics to support children, families, and other educators.

- PSLO 4: (Observation, Documentation and Assessment) Utilize authentic assessment strategies based on observation, reflection, documentation, and interpretation of children's development to inform teaching practices.

- PSLO 5: (Family Engagement) Incorporate strategies for building respectful and reciprocal relationships with families, children and the community in order to support children's development and learning. Develop knowledge and skills to provide a responsive curriculum and learning environment that reflects the children and the families in the program.

Career Information

Upon completion of this certificate and with appropriate documented experience, the student meets the requirement for employment as a teacher in publicly funded early care and education programs, serving infants through preschool-age children. The student also meets the requirements to work as a teacher in a privately funded early care and education program, as well as in a before-and-after school-age program.

Early Childhood Education, Associate Teacher Certificate

Upon completion of one of the following certificates, and with appropriate documented experience, the student meets the minimum requirements for employment in a privately funded child care program or family day care program. Certificates are designed to meet varying employment levels and focused training with infants and school-age children. These requirements are outlined in Title 22 (Department of Social Services) regulations for child care licensing.

To be eligible for the Child Development Permit (Associate Teacher) students must also complete experience requirements for the particular permit for which they are applying. See ECE Department for further information.

Evaluate and implement developmentally appropriate and culturally relevant approaches to teaching and learning which support the whole child including foundational skills and concepts in language and literacy, math, science, art, health and wellness, and social relationships.

- PSLO 3: (Professionalism) Develop competencies, professional skills, and plans for professional growth. Integrate reflective practices to support professional growth as an Early Childhood professional. Understanding of and integration of the NAEYC Code of Ethics to support children, families, and other educators.

- PSLO 4: (Observation, Documentation and Assessment) Utilize authentic assessment strategies based on observation, reflection, documentation, and interpretation of children's development to inform teaching practices.

- PSLO 5: (Family Engagement) Incorporate strategies for building respectful and reciprocal relationships with families, children and the community in order to support children's development and learning. Develop knowledge and skills to provide a responsive curriculum and learning environment that reflects the children and the families in the program.

Career Information

This certificate allows the student to work as a teacher in a private early care and education (Title 22) program, serving infants/toddlers, preschool-age children, and school-age children in before-and-after school programs. With the Associate Teacher Child Development Permit, an individual can work as an assistant or associate teacher in a publicly funded (Title 5) early care and education program.

Early Childhood Education, Infant Specialist Certificate

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field. Topics include an introduction to the profession, observation techniques, and age-appropriate care and education. Additionally, it focuses on infant development and the care of education of infants/toddlers in group settings. The Infant Specialist Certificate is designed to prepare students to work with children ages 0-3 in a variety of early care and education settings. Completion of the Certificate fulfills the child development coursework requirement, combined with experience, for the California Child Development Permit at the Teacher level. Students meet the minimum requirements for employment in an infant care program.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **PSLO 1: (Development and Learning)** Analyze and synthesize research and theories to support development and learning. Evaluate and implement developmentally appropriate and culturally relevant approaches to teaching and learning which support the whole child including foundational skills and concepts in language and literacy, math, science, art, health and wellness, and social relationships.

- **PSLO 2: (Professionalism)** Develop competencies, professional skills, and plans for professional growth. Integrate reflective practices to support professional growth as an Early Childhood professional. Understand and integrate the NAEYC Code of Ethics to support children, families, and other educators.

- **PSLO 3: (Observation, Documentation and Assessment)** Utilize authentic assessment strategies based on observation, reflection, documentation, and interpretation of children’s development to inform teaching practices.

- **PSLO 4: (Family Engagement)** Incorporate strategies for building respectful and reciprocal relationships with families, children and the community in order to support children's development and learning. Develop knowledge and skills to provide a responsive curriculum and learning environment that reflects the children and the families in the program.

Career Information

Upon completion of this certificate and with appropriate documented experience, the student meets the minimum requirements for employment in an infant care program. Additionally, upon completion of one of the following certificates, and with appropriate documented experience, the student meets the minimum requirements for employment in a privately funded child care program or family day care program.

**Early Childhood Education, School Age Child Care and Education Certificate**

Upon completion of one of the following certificates, and with appropriate documented experience, the student meets the minimum requirements for employment in a privately funded child care program or family day care program. Certificates are designed to meet varying employment levels and focused training with infants and school-age children. These requirements are outlined in Title 22 (Department of Social Services) regulations for child care licensing.

**Catalog Date:** June 1, 2020

Understand and integrate the NAEYC Code of Ethics to support children, families, and other educators.

- PSLO 3: (Observation, Documentation and Assessment) Utilize authentic assessment strategies based on observation, reflection, documentation, and interpretation of children’s development to inform teaching practices.

- PSLO 4: (Family Engagement) Incorporate strategies for building respectful and reciprocal relationships with families, children and the community in order to support children’s development and learning. Develop knowledge and skills to provide a responsive curriculum and learning environment that reflects the children and the families in the program.

Career Information

Upon completion of this certificate and with appropriate documented experience, the student exceeds the minimum requirements for employment as a teacher in privately funded before-and-after school child care programs. These requirements are outlined in Title 22 (Department of Social Services) regulations for child care licensing.

Early Childhood Education (ECE)

ECE 295 Independent Studies in Early Childhood Education

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

- Use information resources to gather discipline-specific information.

- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

- Explain the importance of the major discipline of study in the broader picture of society.

- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

ECE 300 Introduction to Principles and Practices in Early Childhood Education

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| C-ID: | C-ID ECE 120 |
| Catalog Date: | June 1, 2020 |

This course is an introduction to early childhood education, including an overview of the history of the field, evolution of professional practices and ethics, educational principles that support child development from birth through the school-age years, and teaching practices based on observation, documentation, and interpretation of children’s behavior.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Differentiate between philosophies of early childhood education in regards to assumptions about how young children learn and how early childhood teachers should teach.
- Identify and compare effective policies, practices and environments in early care and education
- List different program types, delivery systems, and licensing and regulation structures in early childhood settings.
- Demonstrate awareness of developmental ages and stages and how they impact their teaching.
- Define developmentally, culturally and linguistically appropriate practice.
- Describe the characteristics of effective relationships and interactions between early childhood professionals, children, families, and colleagues and examine the importance of collaboration.
- SLO #2: Relate current perspectives on childhood, the care of children, and early childhood education to historical and cultural contexts.
- Compare and contrast theoretical and historical perspectives
- Identify the historical roots of early childhood education.
- SLO #3: Define and identify the role of observation, documentation, and interpretation of children's play as a tool for planning curriculum for young children and assessing their learning.
- Describe the relationship of observation, planning, implementation, and assessment in effective programming.
- Validate the importance of documentation of children's work in progress as an important tool in the learning process for children, teachers, and parents.
- Utilize observation and documentation to design play-based environments.
- SLO #4: Identify career paths, certification options, professional associations, and dispositions for working in the early childhood profession.
- Explain early care and education as a profession, including ethics and professional organizations.
- Recognize the importance of advocacy and legislative issues impacting the early care and education field.
- List different licensing and professional requirements as required by Title 22, Title 5 and the Child Development Permit.
- SLO #5: Describe principles and practices that guide teaching when working with young children, to include the development of play-based learning environments, routines that involve children in applying emerging skills, and strategies that support young children's social competence.
- Examine the value of play as a vehicle for developing skills, knowledge, dispositions and strengthening relationships amongst young children.
- Identify ways of using play-based curriculum as a vehicle for developing skills, dispositions and knowledge.
- Compare and contrast principles of positive guidance strategies.
- Identify practices promoting positive guidance, communication and problem solving skills.
Describe adaptations needed to support children with diverse abilities.
Define the importance of establishing an anti-bias environment to support all children.

ECE 304 Family to Family: Introduction to Family Child Care

- **Units:** 1
- **Hours:** 18 hours LEC
- **Prerequisite:** None.
- **Transferable:** CSU
- **Catalog Date:** June 1, 2020

This course is an orientation to Family Child Care including local regulations, health and safety, curriculum, behavior management, and business requirements of in-home child care services.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- identify the components of a successful and developmentally appropriate, licensed Family Child Care Facility.
- develop criteria for implementing components of a quality family child care.
- assess (through observation) that criteria are being met.

ECE 307 Introduction to Bilingual Education

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None.
- **Catalog Date:** June 1, 2020

This course is an introduction to the study of the education of English Learners in California and the United States. It includes the history, relevant legislation, first and second language acquisition theories, practices and strategies for the development of English proficiency. The course involves observations and tutoring of English Language Learners using materials and strategies responsive to the students’ primary language and assessed levels of English proficiency.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- **SLO#1** Identify and explain the historical, political, and legal development of bilingual education in the United States.
- **SLO#2** Analyze federal and state mandates and their impact on current principles and practices that impact bilingual education.
- **SLO#3** Research existing mandates for English Learners such as California’s Proposition 227 and Proposition 58 and their impact on current practices and provisions for bilingual education.
- **SLO#4** Identify and critique different program models of bilingual education instruction and their relationship to state English Language Development and English Language Arts content standards and framework.
- **SLO#5** Analyze elements of public school curriculum and instruction that affect the achievement of English Language Learners.
- **SLO#6** Design strategies that build on the strengths of Second Language Learners’ first language, family culture, background, and experiences.
- **SLO#7** Promote student academic language growth through the development of inclusive practices.
- **SLO#8** Identify the assessment measures for English Learners.
- **SLO#9** Review the purposes, content, and uses of the California English Language Development Standards and English Learner Proficiency Assessment for California (ELPAC).
- **SLO#10** Appraise the attitudes of policymakers, educators, and the public towards bilingual education.
- **SLO#11** Examine personal biases and attitudes toward the implementation of bilingual education and second language learners.
- **SLO#12** Evaluate and implement curriculum and instructional practices to support Dual Language Learners.
Recommend environmental supports and instructional practices to promote home language retention.

Evaluate materials to support Dual Language Learners including, but not limited to, the Preschool Language Learner Guide, Preschool Learning Foundations and Framework.

**ECE 312 Child Development**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** ENGWR 101 or 103; or ESLL 320, ESLR 320, and ESLW 320.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area III(b); CSU Area D; CSU Area E1; IGETC Area 4  
**C-ID:** C-ID CDEV 100  
**Catalog Date:** June 1, 2020

This course examines the major physical, psychosocial, and cognitive/language developmental milestones for children, both typical and atypical, from conception to adolescence. There will be an emphasis on interactions between maturation processes and environmental factors. While studying developmental theory and investigative research methodologies, students will observe children, evaluate individual differences and analyze characteristics of development at various stages.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #1:** Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive and language development using research based methodologies.
- **SLO #2:** Differentiate the developmental tasks in each of the ages and stages of development.
- **SLO #3:** Distinguish the characteristics of typical and atypical behavior of children.
- **SLO #4:** Examine major educational theories to each stage of development.
- **SLO #5:** Compare and contrast various factors that influence the growth and development of children.
- **SLO #6:** Evaluate the needs of children of all ages under varying conditions and how to provide for these needs.
- **SLO #7:** Identify the responsibilities of parenthood.
- **SLO #8:** Examine ways in which developmental domains are continuous, sequential and interrelated.
- **SLO #9:** Investigate and explain sources of developmental change and reasons for disturbances in the developmental process.
- **SLO #10:** Apply developmental theory to the analysis of child observation, surveys, and/or interviews using investigative research methodologies.
- **SLO #11:** Demonstrate objective techniques and skills when observing, interviewing, describing and evaluating behavior in children of all ages, cultures and backgrounds and her/his environment.
- **SLO #12:** Examine and explain how bias influences the research process.
- **SLO #13:** Differentiate characteristics of typical and atypical development at various stages.
- **SLO #14:** Identify and describe risk factors that impact families and child at each major developmental stage
- **SLO #15:** Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.
- **SLO #16:** Review the importance of inclusive programs to support children with atypical development.
- **SLO #17:** Investigate and explain the process of bilingual development in children at various stages.
- **SLO #18:** Evaluate the role of the family in facilitating children’s development.
- **SLO #19:** Validate the role of play and its relationship to development at various stages.
- **SLO #20:** Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.
- **SLO #21:** Demonstrate knowledge of current research findings as they apply to child development.
Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.

ECE 314 The Child, the Family and the Community

This course is a historical and current examination of the developing child in a societal context focusing on the interrelationship of family, school and community. The process of socialization and identity development will be highlighted, showing the importance of respectful, reciprocal relationships that support and empower families.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO#1** Analyze theories of socialization that address the interrelationship of child, family and community.
- **SLO#2** Demonstrate the principles of child development within the context of a system influenced by numerous factors of socialization.
- **SLO#3** Discuss theories about the role of the family, school and community in the process of socialization.
- **SLO#4** Compare and contrast diverse family structures, parenting styles, culture, traditions and values and their impact upon children and youth.
- **SLO#5** Evaluate how educational, political and socioeconomic factors directly impact the lives of children and families.
- **SLO#6** Examine the impact of change and transitions upon children and family dynamics.
- **SLO#7** Investigate the political system and child advocacy and its effects on children and families.
- **SLO#8** Examine the role of child care and schooling in the socialization of children.
- **SLO#9** Synthesize and analyze research regarding social issues, changes and transitions that affect families, schools and communities.
- **SLO#10** Describe the patterns and configurations of socialization factors that are needed to explain the variance in developmental paths and outcomes of children.
- **SLO#11** Apply socialization theory in early care and education environments.
- **SLO#12** Critique strategies that support families through respectful, reciprocal relationships to involve families in their children's development and learning.
- **SLO#13** Define and examine a variety of contemporary issues that influence family functioning and develop appropriate strategies to support families dealing with stress.
- **SLO#14** Interpret the impact of socioeconomic factors on children and families, including but not limited to the following areas: work, childcare and education, single parenting, health, poverty and children with special needs.
- **SLO#15** Investigate and explain the effects of age, gender, diverse abilities, language and culture, racial identity and ethnicity, socioeconomic status, institutions, the media, and public policy on children and families.
- **SLO#16** Assess community support services and agencies that are available to community and families.
- **SLO#17** Demonstrate the ability to identify and analyze risk factor/or problems and support families in finding appropriate community resources.
- **SLO#18** Demonstrate knowledge of legal requirements and ethical responsibilities of professionals working with all children and families.
- **SLO#19** Investigate advocacy strategies to influence public policy on behalf of children and families.
- **SLO#20** Identify stereotypes and assumptions that affect attitudes and actions within the family, the culture and the professional community.
- **SLO#21** Analyze one's own values, goals and sense of identity as it relates to family history and life experiences, assess how this impacts relationships with children and families.
Explore one’s own family history and examine how it affects our relationships with children and families.

Investigate personal biases that can affect their work with children and families.

**ECE 320 Curriculum and Interactions in Early Childhood Education**

**Units:** 4  
**Hours:** 36 hours LEC; 108 hours LAB  
**Prerequisites:** ECE 300 and 312 with grades of “C” or better  
**Corequisites:** ECE 326  
**Enrollment Limitation:** Under California law (Title 22) any persons working directly with children must provide proof of current Tuberculosis clearance and provide any required proof of immunizations (currently: measles, pertussis, and influenza/influenza waiver).  
**Transferable:** CSU  
**C-ID:** C-ID ECE 130  
**Catalog Date:** June 1, 2020

This course provides supervised experience working with children in an early childhood setting. Topics include principles of curriculum development, classroom design, and child guidance, with the opportunity to apply these key teaching principles in practical situations. This course is approved as the required programs and curriculum core course specified in Title 22 of the Health and Safety Code of the Department of Social Services, Community Care Licensing Division and Title 5 Department of Education regulations. Before beginning lab assignments, students must show proof of TB clearance and documentation of all required vaccinations. (C-ID ECE 130)

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO #1:** Apply developmentally appropriate principles and practices to support young children's optimal development and learning within healthy, safe, respectful, supportive, and challenging learning environments.

- Explain verbally and in writing the sequence of play as central to development and learning for young children.

- Define, explain and apply constructivist theory in curriculum planning for young children.

- Identify key ways in which the environment functions as an essential component of curriculum and as the “third teacher” in an early childhood classroom.

- **SLO #2:** Evaluate one's own teaching experiences to guide and inform practice.

- Identify the key roles of the teacher in the cycle of observation, documentation, child guidance, designing play-based learning environments and activities.

- Evaluate teacher behaviors for best practices reflecting current research and the impact it has on children's learning and development.

- **SLO #3:** Design, develop, and evaluate play-based learning environments for young children, routines that involve young children in applying emerging ideas and skills, and developmentally-appropriate and inclusive learning activities for young children.

- Organize environments rich in possibilities and provocations that invite the children to undertake extended exploration and problem solving.

- Design environments which support and enrich children's learning through in-depth, short-term and long-term project work.

- **SLO #4:** Plan, implement, and evaluate experiences that support young children in building a foundation for language and literacy, math and science, social sciences, and the arts.

- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language and literacy, physical/motor mastery, creativity and the arts, mathematics, and science.

- Develop curriculum and environments that support children who are English language learners.

- Demonstrate in curriculum plans the progression from “simple to complex” and “concrete to abstract” and explain how these concepts are essential for all children's learning.

- **SLO #5:** Demonstrate communication and guidance strategies that support the development of young children's social competence.

- Recognize individual differences and diversity in child development and the implications for child behaviors and guidance.

- Validate how the social environment affects the development of children, and reflect about ways to strengthen children and families.
Infer and redirect children's intentions and provide positive ways to express their feelings and ideas.

Understand respectful and reciprocal relationships with families, including how to support families whose home language is other than English and/or whose children have special needs.

ECE 321 Advanced Practicum in Early Childhood Education

Units: 4
Hours: 36 hours LEC; 108 hours LAB
Prerequisite: ECE 300, 312, 320, and 326 with grades of "C" or better
Enrollment Limitation: Under California law (Title 22) any persons working directly with children must provide proof of current Tuberculosis clearance and provide any required proof of immunizations (currently: measles, pertussis, and influenza/influenza waiver).
Transferable: CSU
C-ID: C-ID ECE 210
Catalog Date: June 1, 2020

The advanced practicum course provides supervised experience for students as teachers in an early childhood education program and is aimed at building leadership in the areas of developing environments for learning, child observation and assessment, documentation of children's work, guiding behavior, group management, collaborative teaching, supporting relationships with families, and effective preparation and implementation of curriculum. In an early childhood setting and under the guidance of a mentor teacher, students will build on introductory experiences offered in Introduction to Curriculum. Students will be assigned to the campus child development centers or centers with approved mentor teachers for the supervised laboratory experience. Lecture and laboratory components provide opportunities to plan, provision, and supervise the overall learning setting. Course work is aimed at mastering classroom leadership in the areas of child observation, documentation of children's work, child assessment, guidance of behavior, group management, collaborative teaching and effective oversight of long-term study projects. Before beginning lab assignments, students must show proof of TB clearance and documentation of all required vaccinations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO# 1: Appraise philosophies, principles, and practices of early childhood education that are formulated from research-based theories of how young children learn within a social and cultural context.
- Apply knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; apply understanding of the multiple influences on developmental learning.
- Apply the NAEYC code of ethical conduct into practices.
- SLO# 2: Design, arrange, observe, and evaluate classroom environments wherein children construct knowledge within a context of play.
- Analyze classroom space in terms of its effect on the behavior and interactions of children and teachers.
- Design aesthetic environments that respect the child and their learning.
- Integrate the vision of a child as a competent learner in the designing the classroom environment and interactions.
- SLO# 3: Evaluate communication systems within a classroom to involve families in the process of curriculum and program design.
- Assess personal experiences to inform and guide future teaching and collaborative practices.
- Apply principles of observation and documentation to communicate regularly with colleagues and children's families in order to plan curriculum that meets developmental needs, builds on current knowledge and research about culturally-respectful and inclusive environments.
- Analyze and utilize the documentation of children's work in progress as an important tool in the learning process for children, teachers, and parents.
- SLO# 4: Plan, implement, observe, and evaluate the overall and ongoing curriculum and learning encounters, verifying opportunities to apply emerging skills in the areas of language and literacy; math and science; the arts; physical development; and social sciences.
- Plan, present and evaluate a variety of developmentally, culturally and linguistically appropriate, play-based curricula and environments that integrate children's developing learning competencies and skills.
- Present concepts and hypotheses in multiple forms such as print, art, construction, drama, music, puppetry, and shadow play.
- Respond to the emerging interests and developmental inclinations of children.
• SLO# 5: Demonstrate the use of observation, documentation, and interpretation for curriculum planning, assessment of children's learning, and advocacy in regards to making visible children's learning.

• Integrate and display documentations of the children's work.

• Design activities offered over time that give children opportunities to construct cognitive connections and thereby build knowledge.

• Evaluate the importance of risk-taking to cognitive, physical and social development.

• Reflect on teaching experiences in order to guide and inform practice.

ECE 322 Promoting Children's Social Competence

This course focuses on early childhood guidance and discipline through examination of theories, research and practical application for teachers in early childhood classrooms and families. The course includes strategies for understanding and responding to children's behavior in ways that are congruent with the core values of early childhood education. Concepts of guidance relating to typical and atypical development, culture, and environment will be presented. Developmental stages of children's behavior, positive guidance strategies and teaching social-emotional skills are included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO 1: Integrate research based knowledge of child development theories and practices to support social-emotional development of young children.

• Research factors in at-risk environments that affect the healthy social development of young children.

• Identify elements of children's and adult's development, culture, dispositions or experiences.

• Evaluate issues that influence social and emotional interactions and behavior.

• SLO 2: Analyze children's social-emotional development as the foundation for all later learning.

• Review practices that emphasize positive emotional growth and support the early identification of emotional and behavioral difficulties.

• Explore practices that identify the underlying need behind each individual behavior.

• Analyze the connection between responsive relationships with adults and children as the basis for healthy emotional development and learning.

• Incorporate reflective practices as the organizational and responsive model to support the healthy social-emotional development of children.

• SLO 3: Acquire knowledge of the importance of verbal and non-verbal communication and the impact on social-emotional development.

• Describe the channels of verbal and non-verbal communication.

• Investigate the different ways in which children use both verbal and non-verbal communication.

• Evaluate the ways in which non-verbal and verbal behaviors communicate messages about relationships between adults and children.

• SLO 4: Recognize and model the ethical principles and educational values that are the foundation for early childhood education.

• Assess the difference between simple decision-making and ethical judgments.

• Compare and contrast how program goals, strategies and standards relate to ethical judgment.

• Outline the skills, knowledge and dispositions related to the ethical code of conduct, day-to-day decision making and children's behavior.

• Choose and practice elements of personal development that support early childhood educational professionals' ability to implement and model respectful relationships with co-workers, families, and children.

• SLO 5: Analyze the role of the teacher in the healthy emotional development of young children.
• Investigate a constructivist approach to foster moral classrooms that support the moral development of young children.
• Implementing strategies that foster social-moral atmosphere in the classroom that promote intellectual, moral, emotional and personality development
• Propose how to use time, space, ritual and routines, and the physical play-based environment that foster positive social interactions and preserves the identity of children
• Identify teaching and parenting practices that foster social-emotional skills and positive self-esteem
• SLO 6: Develop a plan to support children when they face stressful situations
• Construct an understanding of educational practices that support children's and adult's socio-emotional development, emotional regulation, social knowledge, moral development and social understanding.
• Apply knowledge of brain research theory when designing practices that support children social-emotional development
• Incorporate strategies for helping children cope more effectively when they are under stress
• Propose communication strategies with families who are facing stressful situations.
• Develop clear rationale for choosing guidance strategies based on best practices that support individual children
• SLO 7: Confirm the importance and nature of play in the social-emotional development of young children
• Analyze the relationship of play to other aspects of development
• Review the developmental trends in various types of play
• Evaluate how play contributes to each of the elements of social-emotional and moral development
• Appraise the role of the adult in facilitating play-based environments that promote moral development.

ECE 326 Making Learning Visible Through Observation and Documentation

Units: 3
Hours: 54 hours LEC
Prerequisite: ECE 312 with a grade of "C" or better
Transferable: CSU
C-ID: C-ID ECE 200
Catalog Date: June 1, 2020

This course applies critical and reflective thinking to observation and assessment of young children's development. It also prepares teachers of young children to use observation, documentation, and interpretation strategies to improve program quality in early childhood settings. Multiple forms of child assessment and early childhood program assessment are explored.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: Appraise the purpose, value, and use of formal and informal assessments, including ethical and legal concerns.
• Generate and analyze portfolios of observations of young children's growth and development, and use the information with children and families.
• Analyze documentation to design and assemble environments that support children's learning.
• Demonstrate and preserve children's ideas, thoughts, feelings, and reports to stimulate their memories of significant experiences, thereby further enhancing their learning related to the topics investigated.
• Incorporate knowledge of the legal and ethical responsibilities, including confidentiality related to assessment in early childhood education.
• Evaluate and identify logistical challenges, biases and preconceptions about assessing children.
• SLO #2: Assess the strengths and limitations of common assessment tools with respect to children's diverse cultures, home languages, and developmental capabilities.
• Utilize observation and documentation to assess children's interest, strengths and skills. Consider the effect of social context, child's state of health and well-being, primary language, ability and environment on assessment tools.
• Implement planning and evaluation that can be done by the team of adults who work with the children.
• Examine children's collaborative work on a daily basis and discuss with them their ideas and the possibilities of new options for the following days.

• Analyze and implement decisions made on the basis of what individual or groups of children have found interesting, stimulating, puzzling, or challenging.

• Develop the ability to support and optimize the children's thinking by providing them with tools and materials that encourages them to express their ideas.

• Implement, plan and evaluate what can be done by the team of adults who work with the children.

• SLO #3: Recommend changes to play environments, guidance strategies, curriculum activities, and care routines based on systematically recorded observational data that documents children's actions, ideas, and feelings.

• Utilize documentation and assessment tools (DRDP) to inform parents and policy makers of "best practices" in early childhood education.

• Design opportunities to support parents to reexamine their assumptions about their parenting roles and their views about the experience their children are living, and take a new and more inquisitive approach toward the whole school experience.

• Discover different opportunities for parental involvement: listening to children's intentions, helping them find the materials they need, making suggestions, helping children write their ideas, offering assistance in finding and reading books, and measuring or counting things in the context of the project.

• Research and apply observation tools (e.g., ECERS-R and ELLCO) and documentation to support play-based learning environments.

• Generate provocations in the environment to support children’s inquiry strategies.

• SLO #4: Implement assessment within play-based environments, curriculum, and care routines designed to support all children, regardless of developmental capabilities.

• Demonstrate how children learn when involved with materials that are concrete and relevant to them.

• SLO #5: Integrate observed documentation of children's ideas, feelings, and actions to engage children's families and others as active partners in developing early childhood curriculum and programs.

• Appraise teacher's role in the development of plans generated by children's ideas.

• Evaluate the documented steps taken by children during their investigations and representational work.

• Uncover the uniqueness of each child's construction of his or her experience, and the ways group efforts contribute to their learning.

• Analyze and adjust teaching strategies, and ideas for new strategies, while deepening teachers' awareness of each child's progress.

• Formulate informed decisions about appropriate ways to support each child's development and learning.

• SLO #6: Develop photo documents that help others see and value how young children learn within quality early childhood settings.

• Categorize and design documentation displays highlighting the children's work and learning process.

• Integrate the Reggio Emilia's philosophy, theory and practices when documenting children's learning.

• Arrange careful and attractive documentary displays, which convey to children that their efforts, intentions, and ideas are taken seriously.

• Analyze first-hand observations of children's work in a wide variety of media to provide evidence of their learning.

---

ECE 330 Infant and Toddler Development

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisites:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers infant development from conception through three years of age. Students will apply current research to the preparation for conception, birth, and raising children in the first three years of life. Students will learn strategies for caring for infants at each developmental stage. This course is for parents or professionals working with infants in health fields, education, or social services.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- SLO #1: Analyze early growth and development from conception to thirty-six months.
- Assess current research regarding all developmental domains: physical, cognitive, social/emotional, and language.
- Differentiate the developmental tasks in each of the developmental domains.
- Examine the research regarding positive attention, approval, and attunement as the foundation of secure attachment.
- SLO #2: Differentiate the characteristics of typical and atypical development.
- Identify and describe the risk factors that can potentially impact families and affect infant growth.
- Examine access to early intervention and the types of observation tools that can assess potential developmental delays.
- SLO #3: Assess respectful care-giving strategies that respond to cultural diversity and support justice, equality and inclusion.
- Formulate guidance strategies to support the healthy self-identity of infants.
- Distinguish variations in temperament and their significance to parents and caregivers.

**ECE 331 Care and Education of Infants and Toddlers**

This course applies current research in infant development to the teaching and care of infants in group settings. Early childhood education principles and practices are emphasized in the application of care and education of infants from birth to three years of age. Students will learn strategies for designing, implementing, and evaluating group care programs for infants and toddlers.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate an understanding of essential policies and practices of quality infant and toddler programs.
- Support context for learning including environments, care, experiences, conversations, and interactions.
- SLO #2: Analyze strategies to promote healthy and respectful relationships in the care and education of infants and toddlers.
- Caregiving routines and guidance strategies.
- SLO #3: Evaluate infant and toddler curriculum and environments based on observation, documentation, and reflection.
- Understand how curriculum is used for planning, family engagement, and advocacy for children with atypical development.

**ECE 342 Constructive Math and Science in Early Childhood Education**

The course is an introduction to the constructivist approach to teaching pre-math and science in early childhood education. The content and teaching techniques support the perspective that children construct knowledge through a dynamic, interactive process that facilitates their development of working theories relating to math and science.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO#1: Examine how young children learn mathematics and science concepts based on the knowledge of relevant research and child development.
describe the constructivist and inquiry-based approaches to teaching in early childhood education.

analyze key math and science concepts children are building in early childhood

critique the important concepts in children’s construction of knowledge in math and science while comparing inquiry based learning to product-driven repetition and drill practice.

SLO#2: Evaluate curriculum in math and science for young children using an constructivist/inquiry-based approach.

integrate knowledge of the constructivist/inquiry-based approach to design curriculum that is culturally respectful and inclusive as well as considerate of children's prior experiences gaining knowledge about the world.

design and implement curriculum in math and science using the constructivist/inquiry-based approach.

SLO#3: Assess effective approaches to teaching and math and science in early childhood education.

demonstrate teaching techniques that encourage and support children in actively developing understandings of the processes involved in mathematical and scientific knowledge.

compare effective, appropriate, and intentional teaching techniques for supporting, scaffolding, documenting, and assessing young children's mathematical and scientific learning.

SLO#4: Analyze important elements of the learning environment for young children to learn math and science concepts.

design math-rich and science-rich learning explorations to provide meaningful opportunities for children to apply and master inquiry-based skills and concepts.

ECE 343 Language and Literacy Development in Early Childhood

This course will prepare current or future early childhood educators and caregivers to understand and enhance the emergent literacy experiences of young children. The knowledge of developmentally appropriate literacy practices will improve the early childhood educators' abilities to prepare children from birth to age 5 for reading and writing in the primary grades.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO # 1: Describe developmental patterns in early literacy learning and research-based teaching practices that help children build a foundation for rich vocabularies and language fluency for reading and writing.
- Compare and contrast literacy, emergent literacy and early literacy.
- Evaluate ways of assessing children's language development and literacy learning.
- Review current research pertaining to the acquisition of language and pre-literacy skills in young children.
- Describe ways of involving families in their young children's emerging literacy skills.
- SLO # 2: Analyze the developmental continuum of reading and writing and use it in determining developmentally appropriate practices for literacy in early childhood.
- Design and define developmentally appropriate goals and expectations for young children's achievement in reading and in writing.
- Incorporate developmentally appropriate teaching practices that support children's language and literacy knowledge from birth through age five.
- Examine and assess the teacher's role in promoting language and literacy development in young children.
- Evaluate and demonstrate strategies of collaboration with children's families to implement projects that support children's literacy experiences both at school and at home.
- Distinguish quality print-rich environments in which children can work and play.
- Apply principles of development in designing and implementing activities and curricula that promote language and literacy development.
• Compare and contrast opportunities for children to use language and literacy for authentic purposes in school, home and the community.

• SLO # 3: Analyze strategies for adapting emergent literacy practices for individual and cultural differences, including second language learners.

• Assess and propose literature and other learning materials for diverse learners, as well as cultural and linguistic variations among children.

• Articulate the components of developmentally appropriate literacy events inclusive of children with special needs and diverse backgrounds.

• Design adaptations to the environment and experiences to support diverse learners.

• SLO# 4: Use authentic forms of assessment to identify progress in language and literacy skill.

• Examine different assessment methodologies to evaluate the development of pre-literacy and language skills.

• Critically reflect on best practices and current research in promoting language and literacy development in children.

• Evaluate and define program policies (program funding, staffing ratios, curricular resources and assessment) that support early childhood language and literacy teaching and learning.

ECE 350 Introduction to Elementary Teaching with Field Experience

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Under California laws (Title 22 and Title 5) any persons working directly with children have to give proof of current Tuberculosis clearance.
Advisory: ECE 312
Transferable: CSU
General Education: AA/AS Area III(b)
C-ID: C-ID EDUC 200
Catalog Date: June 1, 2020

This course introduces students to the concepts and issues related to teaching diverse learners in today's contemporary schools, Kindergarten through grade 12 (K-12). Course content includes teaching as a profession and career, historical and philosophical foundations of the American education system, contemporary educational issues, California's content standards and frameworks, and teacher performance standards, as well as observation skills, communication skills, diversity and social issues. In addition to class time, the course requires a minimum of 45 scheduled hours of structured fieldwork in public elementary school classrooms that represent California's diverse student population, and includes cooperation with campus-approved certificated classroom teachers. Students' fieldwork experiences will integrate and apply the course content. Before beginning field placement, students must show proof of TB clearance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO#1: Examine the process of becoming an elementary school teacher.

• define the role and function of the teacher in the public school setting.

• identify academic requirements and experiences needed to obtain a teaching credential.

• evaluate the attitudes, actions and behaviors of the effective professional educator.

• SLO#2: Compare and contrast the various educational philosophies and theoretical frameworks related to human learning.

• apply theories related to child development and learning in a field placement setting.

• investigate a personal view of teaching as a career in terms of educational philosophy and pedagogy.

• SLO#3: Examine and assess issues concerning student diversity, societal change and the challenges they present.

• apply principles that underlie effective relationships with other teachers, students, and families.

• examine communication strategies for inclusive teaching practices and classroom management skills.

• SLO#4: Formulate objective, descriptive and interpretive observation skills.

• demonstrate basic observation methods to assess learning.
assess one's own teaching experience through observation and reflection.

- SLO#5: Apply knowledge of observation and learning theory through planning, teaching and interaction with elementary school students.
- design and implement basic lesson plans in content areas.
- prepare a service learning project.

ECE 356 Programs for the School-Age Child

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | ECE 312 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This program will present the fundamentals of planning, implementing and evaluating programs for before- and after-school care of school-age children (K-6). Course emphasis is on developmental levels, age-appropriate activities and day-to-day program operation. A field trip may be utilized to enhance classroom instruction.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Appraise the quality of school-age programs
- define the elements of a quality school-age program
- choose and use reliable assessment tools to assess and evaluate a variety of environments for school-age child care
- evaluate the implications of state regulations for program functioning
- analyze budgets and staffing patterns for use in before and after school child care
- SLO #2: Design activities for school-age programs
- plan, implement and evaluate age-appropriate activities for school-age programs
- develop schedules, routines, and activities for school-age child care, and employ non-bias attitudes to meet the needs of different ages, gender, and abilities
- SLO #3: Characterize school-age children as active learners
- apply an understanding of the characteristics of school-age children to conducting programs and activities
- analyze active learning techniques appropriate for school-age children
- identify the differences in programs for children of preschool-age from those of school-age

ECE 361 Introducing Young Children to Visual Arts

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Catalog Date: | June 1, 2020 |

This course prepares teachers in early childhood education with strategies for introducing young children to the media and tools of drawing, painting, sculpting, and other visual arts commonly used by young children to represent and understand the world around them. The focus is on observing children's natural ways of exploring each medium and learning strategies to facilitate and document children's emerging skills and relationship with each medium. Included are strategies for designing early childhood environments that promote children's exploration of visual arts.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Define creativity and identify educational practices and procedures which encourage creativity in children
ECE 365 Creative Projects and Experiences for Young Children

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course prepares teachers in early childhood education with strategies for promoting children's creativity through experiential projects and experiences. The focus will be on observing children's natural ways of exploring their environment and on the learning strategies needed to facilitate and document children's learning and emerging skills. Students will evaluate and design creative early childhood environments which promote a project approach and a Reggio Emilia perspective.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO # 1 Define and apply the Reggio Emilia approach to education.
- Create the conditions for learning that are necessary to enhance and facilitate children's construction of his or her own powers of thinking through the synthesis of all the expressive, communicative and cognitive languages.
- Evaluate early childhood classroom environments for their capacity to promote young children's comfort and competence in using expressive media to represent impressions, feelings, and experiences.

- Evaluate and observe the developmental progression of children's exploration and use of the tools and media of drawing, painting, sculpting, and construction and their connection to creativity with children.
- Explore the role of the educator as a designer of visual and performing arts curriculum and pedagogy.
- Create the conditions for learning that are necessary to enhance and facilitate children's construction of his or her own powers of thinking through ideas, interest, and hypothesis.
- SLO #2 Demonstrate the attributes, selection, and use of expressive media and tools commonly used with young children.
- Design encounters with expressive art media and tools that present challenges and problems appropriate to children's developmental interests and abilities for each phase of development from infancy through eight years of age.
- Validate representational work as a way of promoting children's growth and development.
- Integrate the graphic arts as tools for cognitive, linguistic, and social development.
- Promote presentation of concepts and hypotheses in multiple forms of representation -- print, art, construction, drama, music, puppetry, and shadow play -- as they are viewed as essential to children's understanding of an experience.
- SLO #3 Review the California Preschool Foundations in the Visual and Performing Arts, and the California Visual and Performing Art Frameworks (K-12)
- Plan, implement and evaluate art education for children in the lower elementary grades (K-3)
- Design creative explorations that support children noticing, responding to, and engaging in visual arts.
- Create interest areas within an early childhood classroom that provide developmentally appropriate media, tools, and settings for young children's independent exploration and use of a variety of expressive media.
- Plan, demonstrate and evaluate creative learning environment and experiences appropriate to children
- SLO #4 Evaluate classroom environments for their capacity to promote young children's comfort and competence in using expressive media to represent impressions, feelings, and experiences.
- Organize materials to help children make thoughtful decisions about the media.
- Support children to see the connections in learning and experiences.
- Design aesthetic environments that inspire children's understanding of the visual arts and promote art appreciation.
- SLO #5 Design documentation that supports reflective examination among teachers, families, and children of the aesthetic and cognitive dimensions of children's work.
- Summarize anecdotal observations of children's encounters with the tools and media of expressive art and make visible children's learning through developmental portfolios and displays.
- Design spaces to incorporate the documentation of children's work, plans, collections, and on-going projects.
Define creativity and identify educational practices and procedures which encourage creativity in children.

Plan, demonstrate, and evaluate creative learning environment and experiences appropriate to children with diverse cultural, physical, social, emotional and cognitive needs.

SLO # 2 Utilize documentation as an important tool in the Reggio Emilia approach.

Collect anecdotal observations of children's encounters with projects and make visible children's learning through developmental portfolios and displays.

Design documentation that supports reflective examination among teachers, families, and children of the aesthetic and cognitive dimensions creativity in children's work.

SLO # 3 Validate representational work as a way of promoting children's growth and development.

Understand Howard Gardner's theory of Multiple Intelligence.

Integrate the graphic arts as tools for cognitive, linguistic, and social development.

Promote presentation of concepts and hypotheses in multiple forms of representation -- print, art, construction, drama, music, puppetry, and shadow play -- as they are viewed as essential to children's understanding of an experience.

SLO # 4 Research the Project Approach, as, in-depth studies of concepts, ideas, and interests which arise within the group and which enhance children's learning.

Record and analyze children's conversations and and emergent interest an support further exploration of the topics.

Understand that team planning is an essential component of the emergent curriculum.

Value Collaborative group work, both large and small, as a way to advance cognitive development.

Formulate Hypothesis about the possible directions of a project, the materials needed, and possible parent and/or community support and involvement.

SLO # 5 Create aesthetic environments to promote learning.

Design spaces to incorporate the documentation of children's work, plants, collections and on-going projects.

Organize space for small and large group projects and small intimate spaces for one, two or three children.

Organize the classroom and materials to be aesthetically pleasing.

SLO # 6 Explore the role of the teacher as researcher and learner.

Co-explore the learning experience with the children.

Define the teacher's role as they help children make decisions about the direction of study, the ways in which the group will research the topic, the representational medium that will demonstrate and showcase the topic and the selection of materials needed to represent the work.

Provoke ideas, problem solving, and conflict management.

Support children to see the connections in learning and experiences.

Support children express their knowledge through representational work.

Foster the connection between home, school and community.

Organize materials to help children make thoughtful decisions about the media Support children to see the connections in learning and experiences.

---

**ECE 402 Infants with Atypical Development**

**Units:** 3

**Hours:** 54 hours LEC

**Prerequisite:** ECE 312 with a grade of "C" or better

**Transferable:** CSU

**Catalog Date:** June 1, 2020

This course will examine the developmental characteristics, assessment techniques, methods of intervention, natural environments, community and family resources, and current issues of the atypical infant from birth through age three. Students will understand and practice the early intervention techniques the very young children with special needs and disabilities require in the developmental areas of sensory stimulation and integration, gross and fine motor control, cognitive, language, social and self-help skills. The course will explore the community services and agencies that offer family support as well as the laws related to the atypical infant/toddler. Career and vocational opportunities in the fields related to special needs infant/toddlers and the various roles of the multi-disciplinary teams that develop the Individualized Family Service Plan (IFSP) will be examined.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1:** Access and apply current research knowledge related to how infants develop.
- **SLO #2:** Identify conditions which cause birth defects and other developmental disabilities.
- **SLO #3:** Compare and contrast the unique strengths and needs of infants/toddlers with both atypical and typical development in all of the developmental domains: physical, cognitive, social-emotional, and communication skills.
- **SLO #4:** Evaluate the various techniques and instruments used to assess the physical, cognitive, social-emotional, and communication abilities of infant/toddlers with atypical development.
- **SLO #5:** Assess and practice the multi-disciplinary team process utilized in the development of an IFSP (Individualized Family Service Plan), (birth - 3 years).
- **SLO #6:** Articulate the legislation and due process rights that applies to children from birth to three years old with special needs and to their families.
- **SLO #7:** Differentiate and recommend effective public and private program options and community resources available to support infant/toddlers with atypical development and their families.
- **SLO #8:** Formulate an understanding, respect and sensitivity of the diversity in human characteristics that a child with special needs brings to different families.
- **SLO #9:** Support the development of families' self-advocacy and empowerment
- **SLO #10:** Analyze learning environments that allow infants with atypical development to discover and create through active exploration.
- **SLO #11:** Plan and implement activities that are supportive of natural environments, behavior management techniques and instructional strategies to meet the goals and objectives of the IFSP in an inclusive early childhood setting.
- **SLO #12:** Identify career and vocational opportunities in early intervention programs.
- **SLO #13:** Review the education and competency skills required of those who work with infants and toddlers with atypical development.

---

**ECE 404 Children with Special Needs**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** ECE 312 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is designed to provide a broad overview of the characteristics, assessment techniques, methods of intervention, natural environments, community and family resources, and current issues of children from birth to adolescence with diverse abilities and disabilities. The focus is to increase the awareness and understanding of individual needs and strengths in an early childhood and after-school setting. Focus on full inclusion as a support to development will be emphasized. Observations in public and private children's centers, schools and agencies are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO#1:** Appraise the self-identity of children with diverse abilities.
- **SLO#2:** Identify and develop respect for and sensitivity to the diversity in human characteristics and impact of a child with special needs on different families
- **SLO#3:** Generate ideas to create a full inclusion play based environment where the self-identity and learning of children is supported.
- **SLO#4:** Explore strategies to increase the interaction between children with diverse abilities and children who are typically developing.
- **SLO# 2:** Appraise the development of children who are differently-able on all the domains; physical, cognitive, social-emotional, and communication development.
- **SLO# 5:** List and categorize areas of special needs such as speech, hearing, reflexes, reactions, cognition, socio-emotional abilities and physical handicapping conditions.
- **SLO# 6:** Compare and contrast the developmental milestones of children with atypical and typical development.
Apply the accommodations, adaptations, and modifications made to assist the development of children with diverse abilities.

Research, discuss, and debate the practice of inclusion.

SLO# 3: Evaluate the various techniques and instruments used to assess the physical, cognitive, social-emotional, and communication abilities of young children with special needs.

Evaluate an Individualized Educational Plan (IEP) and an Individualized Family Service Plan (IFSP) and the legal and operational requirements.

Apply techniques of observation and documentation to assess developmental progress.

Analyze the multi-disciplinary team process utilized in the development of an Individualized Family Service Plan (IFSP), birth - 3 years and Individualized Education Plan (IEP), 3 - 21 years.

SLO# 4: Evaluate the impact of a child with diverse abilities has on the family.

Describe the grief process families frequently experience with the birth of a child with special needs.

Identify community resources available to support families and caregivers of children who are differently-abled.

Develop support strategies for siblings of children with diverse abilities.

SLO# 5: Evaluate the importance of designing inclusive play based learning environments.

Apply techniques of observation and documentation to assist with the planning for children's activities.

Analyze the role of the teacher in full inclusion environments.

Investigate adaptive strategies, curriculum, tools and equipment.

Explain the code of ethics and rules for confidentiality when working with children with special needs and their families.

Explain the importance of working collaboratively as part of a multi-disciplinary team.

SLO# 6: Synthesize and discuss the history and current trends within the professional literature relevant to the identification and treatment of "special needs" in children with implications in educational practices.

Describe and discuss various definitions of "special needs" in children relative to educational laws, policies, and programs.

Describe and discuss the practical implications of various factors that place children "at risk" for dysfunction as well as those factors connected with "resilience."

Describe and discuss some of the legal, moral, ethical and value-based dimensions of various assessment and intervention strategies involving labeling and treating "special needs" in children.

Describe and discuss various points of view about defining children's special needs within the context of traumatized, vulnerable and oppressed populations, including children with limited legal recourse; persons of various disabilities and health conditions; racial, cultural, socio-economic, language dominance, and sexual preference differences.

ECE 415 Children's Health, Safety and Nutrition

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| General Education: | AA/AS Area III(b) |
| C-ID: | C-ID ECE 220 |
| Catalog Date: | June 1, 2020 |

The key components that ensure the health, safety, and nutrition of both children and staff will be identified along with the importance of collaboration with families and health professionals. Students will be introduced to early childhood curriculum, regulations, standards, policies and procedures related to child health, safety and nutrition. Course emphasis is placed on integrating and maintaining the optimal health, safety, and nutritional concepts in everyday planning and program development for all children, including injury prevention, accident reporting, infectious diseases control, sanitation and emergency procedures and evacuation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO# 1: Assess strategies to maximize the mental and physical health of children and adults in programs for all young children in accordance with culturally, linguistically and developmentally sound practices.
- Demonstrate effective strategies for evaluating health and safety policies and procedures.
- Compare and contrast various health assessment tools and policies.
- Assess strategies to maximize the mental, physical and emotional health in programs for all children in accordance with culturally, linguistically and developmentally sound practice.
- Design and develop developmentally appropriate, culturally and linguistically sound health and safety curriculum to be introduced to children and their families.
- SLO #2: Identify health, safety and environmental risks in children's programs.
- Differentiate symptoms of common communicable diseases and other health conditions that affect children.
- Apply sanitation universal practices in order to prevent the spread of communicable diseases.
- Assess strategies to maximize the mental, physical and emotional health in programs for all children in accordance with culturally, linguistically and developmentally sound practice.
- SLO #3: Analyze the nutritional needs of children at various ages and evaluate the relationship between healthy development and nutrition.
- Differentiate the nutritional needs of various ages of children and plan economical and nutritional meals and snacks which meet current state and federal guidelines.
- Examine nutrition and health practices and different perspectives in culturally-diverse environments.
- Evaluate current nutrition and health hazards in the food supply and explain the control of foodborne illness.
- SLO #4: Recommend regulations, standards policies and procedures related to health, safety and nutrition in support of young children, families and teachers in the program.
- Investigate laws, regulations, standards, policies and procedures supporting health, safety and nutrition in children's programs and families. (e.g. Title 22, Title 5, Fire Code)
- Create emergency response procedures utilizing the provisions required by federal and state laws.
- Demonstrate skill in maintaining standards of health and safety which protect the child from injury.
- Describe the inter-relationships of health, safety and nutrition as conditions affecting children's health.
- SLO #5: Infer aspects of quality in programs for young children as related to health, safety and nutrition.
- Research current issues related to children and their families.
- Evaluate the teacher's role and responsibilities to model, health safety and nutrition appropriate for children and families.
- Formulate various methods of collaboration with teachers and families to promote health, safety and nutrition in settings for children.
- Identify characteristics of abuse and neglect and demonstrate knowledge of mandated child abuse reporting procedures.

**ECE 420 Administration I: Programs in Early Childhood Education**

**Units:** 3

**Hours:** 54 hours LEC

**Prerequisite:** ECE 300 and 312 with grades of "C" or better

**Advisory:** ECE 320 with a grade of "C" or better

**Transferable:** CSU

**Catalog Date:** June 1, 2020

This is an introductory course in the elements of program planning, budgeting, supervision and personnel administration for public and private centers and schools serving young children.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1: Recognize, identify, and appraise the components and measures of quality early care and education programs.
- reference and assess the legal requirements of child care centers according to the California Regulations for Title 22 and Title 5 Programs.
- examine and plan schedules, routines, and enrollment procedures to meet the needs of children and families.
• Review federal and state quality improvement mandates.

• SLO #2: Distinguish basic operational principles of administration in developing and planning a center facility.

• apply basic operational principles of administration in program planning, budgeting, equipping and staffing to meet the nutritional, health, and safety standards for children and families.

• identify required components of record keeping for enrollment and personnel documentation.

• describe the legal requirements and responsibilities of administering an early care and education program.

• summarize essential practices for collaboration with staff, families, and community.

• SLO #3 demonstrate effective practices for managing and leading staff and administering early care and education programs.

• implement ongoing professional development plans based on evaluation of staff and administrator needs.

• formulate strategies for compensation and professional growth opportunities in programs.

• SLO #4 Evaluate strategies to create a diverse and inclusive environment.

• articulate the importance of professional integrity and confidentiality.

• Implement the NAEYC code of ethical conduct to create culturally responsive early care and education environments.

ECE 422 Administration II: Personnel and Leadership in Early Childhood Education

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | ECE 300 and 312 with grades of "C" or better |
| Advisory: | ECE 320 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This is an advanced course in administration and coordination of multi-faceted Child Development Programs. The emphasis of the course will be on publicly funded programs and personnel management. This course meets the requirements of the Education Code under Title 5, and the Commission on Teacher Credentialing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: Recognize, identify, and appraise the components and measures of quality child care programs.

• examine and apply the legal regulations and requirements of publicly funded child care programs under Title 5 of the Education Code.

• analyze and synthesize management issues in relation to budgets, working with boards and supervising agencies, grant proposal writing and developing business plans.

• SLO #2: Develop and demonstrate communication and collaboration skills with colleagues, children, families, and communities of diverse backgrounds.

• describe and analyze current leadership issues in child development program administration.

• SLO #3: Create policies and practices that recognize the importance of the family in the education of young children.

• appraise and evaluate the role of administrator and the interaction with staff, families, volunteers and community.

• identify potential issues and establish procedures involving the interrelationships of families, staff, agencies, and administration.

ECE 424 Adult Supervision: Mentoring in a Collaborative Learning Setting

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | ECE 320 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |
This course is a study of the methods and principles of collaborative learning, with emphasis on supervising adults working in early care and education centers. Special attention is placed on the role of a mentor as a reflective practitioner who is open to professional development and who has a keen understanding of classroom practice that is effective and supports individual strengths for children, families and colleagues. This course satisfies the adult supervision requirement for receiving a supervising teacher permit from the California Commission on Teacher Credentialing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO# 1: Analyze the role and responsibilities of a mentor in an early childhood setting.
- Differentiate between the roles of adult supervision and mentoring.
- Investigate the importance of utilizing multiple learning styles when mentoring others.
- Analyze the developmental stages and learning strategies of teachers and supervisors.
- Develop reflective strategies to enhance their own practices and communication with mentees.
- SLO# 2: Recommend respectful interactions among all learners: children, staff and parents.
- Provide appropriate models, guidance and evaluation for a teaching team, children and families.
- Articulate and apply ethical principles to resolve complex issues.
- Demonstrate for the members of a teaching team how to develop and maintain a safe and developmentally appropriate learning environment for young children.
- Use evidence-based practice to plan and implement collaborative relationships amongst children, families and staff.
- Utilize effective communication strategies to motivate staff, families and children.
- SLO# 3 Analyze the role of a mentor in leadership and advocacy in the field of early childhood education.
- Develop and apply advocacy strategies that facilitate positive outcomes.
- Demonstrate knowledge of the legislative process and laws impacting the early care and education field.
- Exhibit a commitment to professional development and leadership skills.

ECE 430 Culture and Diversity in Early Childhood Education

</tbody>
</table>

This course covers culturally responsive care and education in early childhood settings. It includes the study of socio-cultural, and political issues as they vary across the diverse cultures represented in the classroom and how they impact a child's development. Included are strategies for helping children negotiate and resolve conflicts caused by cultural differences, with a focus on using an anti-bias approach in the classroom. The contribution of historically underrepresented groups to society will be addressed with the intention of promoting the concepts of equality, justice and inclusion for all aspects of human diversity (culture, race, ethnicity, gender, sexual orientation, ability, and age). Teaching strategies which prevent and eliminate the development of prejudice and racism in growing children will be covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO # 1: Compare and contrast theories and identify ways in which cultural and family patterns affect children’s behavior and identity.
- Distinguish stereotypic and biased classroom materials and environments.
- Describe various techniques teachers can use when responding to children developing discriminatory behaviors.
- Define and assess the impacts of factors such as language, ethnicity, religion, immigration, and economic class in the personal history of the student and the subsequent impact on teaching young children and families.
SLO # 2: Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Assess his/her own cultural background and upbringing and identify how this experience impacts personal perceptions of others.

Defend the anti-bias perspective in their everyday interactions with children and families.

Analyze their own biases and how to avoid transmitting them to children.

SLO # 3: Compose rationale and goals for a multicultural, anti-bias early childhood program.

Distinguish stereotypical and biased classroom materials and environments.

Apply a variety of strategies for creating partnerships with parents through building mutual, collaborative relationships, and to challenge bias and injustice in the lives of their children.

Create environments that promote justice, equality and inclusion.

Create opportunities for children to become advocates and active participants in their communities.

SLO# 4: Evaluate the Anti-Bias theoretical framework and how it affects children's growth and development.

Assess how children develop an awareness of differences and how prejudice is formed in the early years.

Identify ways in which cultural and family patterns affect children's behavior and learning.

Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

SLO# 5: Distinguish stereotypical and biased classroom materials and environments.

Build environments that illustrate an Anti-Bias perspective through celebrating diversity; age, culture, gender, ability, sexual orientation, religion, race and ethnicity.

SLO# 6: Examine how children develop an awareness of differences and how prejudice may be formed during the early years.

Assess how children develop an awareness of differences and how prejudice is formed in the early years.

Integrate the nature and processes of systemic and internalized privilege and oppression and their impacts on children's identity development and learning.

Identify and assess the overt and covert ways in which stereotypes and prejudice are learned.

Explore the unique and overlapping issues in racism, sexism, classism, heterosexism, ableism, and ethnocentrism as they relate to children and to early childhood settings.

Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Demonstrate strategies for helping children negotiate and resolve conflicts caused by cultural, class and gender differences, with a focus on using anti-bias approaches in the classroom.

Construct multicultural curriculum which promotes understanding of diversity and elimination of stereotypical themes.

Designed to give students an opportunity to study topics in Early Childhood Education which are not included in current course offerings. Topics may include, but are not limited to: Management of Family Day Care Homes; Guidance of the Special Child in Everyday Living; Behavior and Discipline; Children in Crisis; The Single Parent Family; and Cross-Cultural Experiences with Children and Families.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO #1: Assess childhood as a unique and valuable stage of the human life cycle
- compile information to base work with children on knowledge of child development
- evaluate the support for the close ties between the child and the family
- recognize that children are best understood in the context of family, culture and society
- defend the dignity, worth and uniqueness of each individual (child, family member and colleague)
- apply information to help children and adults achieve their full potential in the context of relationships that are based on trust, respect and positive regard
- implement new creative strategies and resources into their teaching in early childhood programs

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

ECE 498 Work Experience in Early Childhood Education

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student’s progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED TO ONE’S CAREER**.(SLO 1)
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.
- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER**.(SLO 2)
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.
- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR**.(SLO 3)
Economics | Cosumnes River College

Economic studies analyze how people and societies produce various commodities and distribute them for consumption, now or in the future. CRC’s economics offerings include the study of the American economic system, using techniques for the analysis of contemporary economic problems. There is an emphasis on developing the ability to exercise sound judgment in evaluating public policy issues.

Associate Degree for Transfer

A.A.-T. in Economics

The Associate in Arts degree in Economics for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Economics for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Inter-segmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Catalog Date: June 1, 2020

1. These courses are selected from the list following the core requirements.
**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- **PSLO 1**: Describe and apply basic economic principles and concepts to economic issues. This includes the ability to: • Analyze graphical and numerical representations of resource allocation in the presence of scarcity. • Analyze graphical and numerical representations of a microeconomic and macroeconomic equilibrium using the tools of supply and demand and aggregate supply and aggregate demand analysis.

- **PSLO 2**: Demonstrate the use of numerical methods to quantify common terms used in economics. This includes an ability to: • Calculate GDP and economic growth rates. • Calculate unemployment rates. • Calculate inflation rates using a price index. • Calculate profits, total cost, variable cost, and fixed cost.

- **PSLO 3**: Demonstrate the ability to think critically and analyze solutions to major economic questions. This includes an ability to: • Analyze the strengths and weaknesses of major macroeconomic policy tools including fiscal and monetary policy. Evaluation of Monetary and Fiscal Policy will focus on the impact on unemployment, GDP, and inflation. • Comparing perfectly competitive markets and imperfectly competitive markets and their effect on profits, prices, and quantities produced. •

- **PSLO 4**: Discuss the global nature of economic issues. This includes an ability to: • Describe the common features of international trade as it is related to GDP. • Analyze different international trade theories and their implications for specialization.

**Economics (ECON)**

**ECON 100 Introduction to Economics**

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisites: | None. |
| General Education: | AA/AS Area V(b) |
| Catalog Date: | June 1, 2020 |

This course introduces the purpose, terminology, and basic concepts of economic theory. It examines the fundamental economic problem of scarcity and describes how our society is organized to deal with scarcity. It considers some of the problems (unemployment, inflation, national debt, poverty, crime, pollution, etc.) that economic theory may help explain.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO 1**: Understand basic terminology used in Economics. This includes:

- **SLO 2**: Understand basic Economic Models and how they are used to analyze the allocation of scarce resources. This includes:

- investigating the allocation of scarce resources using several Economic models. Examples include the Production Possibilities Curve, the market mechanism using Supply and Demand, Aggregate Demand and Aggregate Supply, Perfectly Competitive Markets and Imperfect Competition.

- **SLO 3**: Demonstrate a basic understanding of a global economy. This includes:

- defining common terms and models used in economics to discuss a global economy. Examples: Net Exports, Specialization, NAFTA, International Trade, Exchange Rates, Comparative Advantage, Absolute Advantage, Tariffs, and Quotas.
ECON 300 Survey of Economics

This course introduces the purpose, terminology, and basic concepts of economic theory. It examines the fundamental economic problem of scarcity and describes how our society is organized to deal with scarcity. It considers some of the problems our economy faces (unemployment, pollution, taxes, inflation, national debt, poverty, crime, international trade, etc.) and how economic theory can be used to investigate these pressing issues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Demonstrate an understanding of basic terminology used in Economics.
- identifying common terms and definitions used in economics (Ceteris Paribus, Opportunity Cost, Scarcity, Recession, Law of Supply, Law of Demand, Marginal Cost, GDP, Inflation, and the Federal Reserve...).
- SLO 2: Identify basic Economic Models and how they are used to analyze the allocation of scarce resources.
- investigating the allocation of scarce resources using several Economic models. Examples include the Production Possibilities Curve, the Market Mechanism using Supply and Demand, Aggregate Demand and Aggregate Supply, Perfectly Competitive Markets and Imperfect Competition.
- SLO 3: Demonstrate a basic understanding of a global economy.
- defining common terms and models used in economics to discuss a global economy. Examples: Net Exports, Specialization, NAFTA, International Trade, Exchange Rates, Comparative Advantage, Absolute Advantage, Tariffs, and Quotas.

ECON 302 Principles of Macroeconomics

This course is a graphical and functional analysis of the economy as a whole. It focuses on the economy's well-being, problems, and possible solutions. Major topics include: basic economic analysis, demand, supply, and equilibrium in a market; macroeconomic sectors, goals, and problems (unemployment, inflation, business cycle, and government budget deficit); the economy's output, income, and price level; aggregate demand, aggregate supply, and equilibrium; and macroeconomic policies (fiscal and monetary). Time permitting, related topics such as international trade, international finance, and economic growth may also be discussed. Course work includes doing arithmetic problems, solving algebraic equations, and graphing straight and curvilinear lines.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: Describe and apply basic economic principles and concepts to macroeconomic issues. This includes the ability to:
  - Analyze graphical and numerical representations of resource allocation in the presence of scarcity.
  - Analyze graphical and numerical representations of a macroeconomic equilibrium using the tools of aggregate supply and aggregate demand analysis.
- SLO 2: Demonstrate the use of numerical methods to quantify common terms used in macroeconomics. This includes an ability to:
  - Calculate GDP and economic growth rates.
  - Calculate unemployment rates.
**ECON 304 Principles of Microeconomics**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** MATH 100; or MATH 102; or one year of High School Elementary Algebra with a grade of C or better; or equivalent skills as determined through the assessment process.  
**Advisory:** MATH 120 or MATH 125 with a grade of "C" or better; or one full year of High School Algebra II with grades of "C" or better in each semester; or equivalent skills demonstrated through the assessment process.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area V(b); CSU Area D2; IGETC Area 4B  
**C-ID:** C-ID ECON 201  
**Catalog Date:** June 1, 2020

This course is a graphical and functional analysis of the units (sectors) making up the economy. The focus is on the sectors' choices and interactions, microeconomic goals (efficiency and equity), problems, and solutions. Major topics include basic principles of economics; basic economic analyses; demand, supply, and equilibrium in a market; markets and applications; costs and production; product and resources markets; and microeconomic problems (externalities, public goods, and income inequality). Time permitting, related topics such as international trade and health economics may also be discussed. Course work includes doing arithmetic problems, solving algebraic equations, and graphing straight and curvilinear lines.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- SLO 1: Describe and apply basic economic principles and concepts to microeconomic issues. This includes the ability to:
  - Analyze graphical and numerical representations of a microeconomic equilibrium using the tools of supply and demand analysis.
  - Analyze the effect on quantity demanded and quantity supplied when prices are above or below the equilibrium price.
- SLO 2: Demonstrate the ability to think critically and analyze the allocation of scarce resources using different market structures. This includes an ability to:
  - Illustrate how prices and production levels (output) are determined in different markets including monopoly and perfectly competitive markets.
  - Illustrate how prices, consumption and production levels (output) are affected by externalities.
- SLO 3: Demonstrate comprehension in analyzing consumer behavior. This includes an ability to:
  - Analyze the effects of a price or income change on consumer demand and quantity demanded using graphical representations and measures of elasticity.
- SLO 4: Evaluate the behavior of a firm. This includes an ability to:
  - Calculate various measures of cost including fixed cost, variable cost, total cost, average cost and marginal cost.
  - Graph various measures of cost including fixed cost, variable cost, total cost, average cost and marginal cost.
  - Compare and contrast the level of profit for a firm in the short run and in the long run.

**ECON 306 Environmental Economics**
This course focuses on the application of economic principles to help understand and manage the relationship between humans and the environment. The central theme is that there are competing demands for our limited natural resources, including the waste assimilation capacity of the environment, necessitating that difficult choices be made regarding how those resources are used. The course illustrates how resources are allocated in a market economy, potential problems from a social perspective with that allocation, and alternative solutions for reallocating resources to achieve more socially desirable outcomes. Issues such as efficiency and externality, benefit-cost analysis, and alternative policy instruments for pollution control are examined. Topics related to global warming, California water resources, and other current environmental policy issues will be discussed as time permits.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Describe and apply basic economic principles and concepts to environmental issues (SLO-1). This includes the ability to:
  - Analyze graphical and numerical representations of a market equilibrium using the tools of supply and demand analysis.
  - Analyze resource allocation in the context of environmental externalities compared to a market solution (SLO-2). This includes the ability to:
    - Compare the quantity produced and the market price that prevails when externalities are included in the analysis with that of those that are observed in standard supply and demand analysis.
  - Analyze resource allocation in an intertemporal context (SLO-3). This includes the ability to:
    - Describe how resource allocation is affected by time.
    - Describe how the discount rate effects resource allocation between two time periods in a two period model with finite resources.
  - Evaluate alternative policy instruments used to correct for market failure (SLO-4). This includes the ability to:
    - Analyze the use of taxes, marketable permits, technological standards and pollution limits, including uniform and non-uniform standards on the incentives of a firm.
    - Analyze the effects of taxes, marketable permits, technological standards and pollution limits, including uniform and non-uniform standards on the quantity produced.
  - Discuss the global nature of environmental issues (SLO-5). This includes an ability to:
    - Describe the nature of divergent pollution issues in terms of their effects at local, state, regional and global levels.

---

**ECON 310 Statistics for Business and Economics**

This course focuses on statistical concepts commonly used in economics, business and other behavioral sciences. It covers the collection, organization, presentation, analysis, and interpretation of numerical data. Major topics include organizing and describing data using graphs, tables, and charts; calculating and interpreting descriptive statistics including measures of central tendency and measures of dispersion; probability and sampling distributions; statistical inference; correlation and linear regression; analysis of variance, chi-square and t-tests. Computer software and/or hand calculations will be used in this course to calculate, organize and display statistical information. Results generated either by hand calculation, the use of computer software, articles or textbook examples will be used to analyze and interpret statistical findings.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• SLO1: Define common statistical terms.

• SLO2: Organize and display data. This includes the ability to:
  - Identify methods used to collect and generate data and identify advantages and disadvantages of each. Construct tables, frequency distributions, pie charts, and plot histogram, stem and leaf plots, boxplots, and scatterplots. Identifying different scales of measurement including Nominal, Ordinal, Interval, and Ratio.

• SLO3: Calculate and analyze descriptive statistics. This includes the ability to:
  - Identify and calculate means, standard deviation, percent, probabilities, and values using tables, formulas, and technologies for discrete and continuous random variables including binomial and normal distributions. Calculate point estimates for the mean, standard deviation and proportion for finite and infinite sampling distributions.

• SLO4: Conduct and interpret hypotheses tests. This includes the ability to:
  - Tests for a one population proportion, tests for a one population mean, tests for a one population variance/standard deviation, tests for two population means, tests for two population proportions, and tests for regression. Distinguish differences between type I and type II errors. Construct and interpret confidence intervals. Determine and interpret levels of statistical significance including p-values. Interpret statistics used in linear regression and ANOVA analysis for estimation and inference.

• SLO5: Identifying Basic Relationships of Probability. This includes the ability to:
  - Identify counting rules. Distinguish between complements, unions, intersections, mutually exclusive events and Bayes Theorem. Identify discrete, continuous and binomial probability distributions.

• SLO6: Use appropriate statistical techniques to analyze and interpret applications based on data from disciplines including business, social sciences, psychology, life science, health science, and education.

---

**ECON 320 Concepts in Personal Finance**

**Same As:** BUS 320
**Units:** 3
**Hours:** 54 hours LEC
**Prerequisite:** None.
**Advisory:** BUS 105
**Transferable:** CSU
**General Education:** AA/AS Area V(b)
**Catalog Date:** June 1, 2020

This course is designed to assist individuals in analyzing their financial affairs. Elements and conceptual basis of financial planning, analysis, and decision making in areas of budgeting, taxes, borrowing, money management, insurance, investments, and retirement will be examined.

This course is the same as BUS 320, and only one may be taken for credit.

**ECON 495 Independent Studies in Economics**

**Upon completion of this course, the student will be able to:**

• SLO #1: DEMONSTRATE COMPREHENSION IN ECONOMIC PRINCIPLES AND PLANNING, AS INDICATED BY COURSE OUTCOMES OF THE SUBJECT AREA.
  - Apply economic principles and concepts of individual economic planning.

• SLO #2: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Analyze the changing economic environment.

• SLO #3: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Analyze the conceptual basis of various economic tools available to the individual as well as the terminology used in their development and implementation.

• SLO #4: DEMONSTRATE THE ABILITY TO THINK CRITICALLY AND ANALYZE PROBLEMS.
  - Evaluate economic needs and goals and design financial models to achieve them.
An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.
Education/Teaching  
| Cosumnes River College

This major provides students with principles, practices, and competencies related to teaching California’s K-12 youth. Students are immersed in practices inclusive of all children, including children who are culturally and linguistically diverse and children with special needs. Students will gain practical fieldwork experience working with and/or observing children at their site placements within Elk Grove Unified School District.

This major is especially designed for students who plan to transfer into California State University, Sacramento’s Teacher Preparation Program, providing the lower division coursework necessary to gain admission to the university and the Elementary Teacher Credential Program. Students planning to transfer in this major should consult with a counselor as requirements vary among transfer universities.

Dean

Department Chairs  Jeannette Mulhern

Associate Degrees for Transfer

A.A.-T. in Elementary Teacher Education for Transfer

The Associate in Arts in Elementary Teacher Education for Transfer Degree (AA-T) is designed to provide a seamless transfer pathway for students interested in pursuing at least one Elementary Teacher Education degree option in the California State University (CSU) system. The degree is comprised of lower division coursework typically required by CSU institutions. Students must complete the core curriculum and electives to meet a total of 60 transferable units, which includes the CSU General Education Breadth or the Intersegmental General Education Transfer Curriculum (IGETC) pattern. Upon successful completion of the degree requirements, students will be guaranteed admission to the CSU system with junior status and will not have to repeat lower division coursework. Students are encouraged to meet with a counselor to develop their educational plans as degree options and general education requirements vary for each university.

Catalog Date: June 1, 2020

Total Units: 44

The Associate in Arts in Elementary Teacher Education for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Apply knowledge and skills gained in various disciplines to ensure transfer to a CSU campus in preparation for successful completion of upper division coursework after transfer (PSLO #1)
- Use the scientific methods of inquiry, data collection, quantitative reasoning, and basic mathematical concepts to analyze information in appropriate disciplines
- Apply analytical reading and writing, research, and critical thinking essential for completing of assigned tasks
- Describe the nature of American government and compare and contrast local, state and national political institutions
- Write and speak effectively, demonstrating the ability to evaluate audience and appeal to it persuasively
- Apply knowledge of world history and cultures to identify the values of a culture and work with others of a diverse culture
- Compare and contrast various forms and styles of music, artworks, and theatrical performances
- Evaluate attitudes, actions, and behaviors indicative of a professional educator (PSLO #2)
- Apply knowledge of developmental theories to assess teaching practices and learning conditions in children and classroom situations. (PSLO #3)

Career Information

The AA-T in Elementary Teacher Education provides students with the foundational knowledge necessary for transfer to a Bachelor of Arts (BA) degree program, especially at a campus of the California State University (CSU) system. Career opportunities for students who have earned BA degrees in Elementary Teacher Education include but are not limited to: Teacher, primary grades; Teacher, intermediate grades; Teacher, private school; Instructional Assistant. Many careers require additional training beyond the Bachelor Degree. NOTE TO TRANSFER STUDENTS: The Associate Degree for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as “double-counting”). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions; it is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

Associate Degrees
A.A. in Liberal Studies for Elementary Education

This major is designed for students who wish to be teachers in public and private elementary schools. Further education at the university level will be required to fulfill all requirements for a teaching credential authorizing service in California public schools.

Note to Transfer Students:
If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate’s degree in this major may be different from the requirements needed for the Bachelor’s degree.

1The program requirements listed here for CSUS apply to students completing this course sequence by Fall 2007. Students should contact a counselor about the new program requirements which were effective with the Fall 2004-05 catalog.

The Liberal Studies for Elementary Education Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Apply knowledge, skills and abilities towards successful completion of coursework at transfer institutions.
- Apply knowledge of child development theories to assess the characteristics of teaching practices and learning conditions.
Career Information

Teacher, primary grades; Teacher, intermediate grades; Instructional Assistant Classes beyond the associate degree may be required to fulfill some career options or for preparation for transfer to a university program.
Emergency Medical Technology
| Cosumnes River College

Cosumnes River College's Emergency Medical Technology course (EMT 100) is designed to provide the student with the skills and knowledge to apply for certification as an Emergency Medical Technician (EMT) in the State of California. EMT certification is the first step to starting a career working on an ambulance. EMT certification is also a pre-employment requirement for most professional fire departments.

Dean

Collin Pregliasco

(916) 691-7261

PregliC@crc.losrios.edu

Certificate of Achievement

Emergency Medical Technician Certificate

EMTs (previously called EMT-I or Basic) are the backbone of the Emergency Medical Services (EMS) system throughout the nation, helping to reduce injury severity and death at the scene of an accident or sudden illness and during transportation to a medical facility.

Students seeking to become a state certified EMT should take the EMT 100 course. The EMT 100 course fulfills the requirements for State EMT certification (NREMT) testing.

Cosumnes River College's Emergency Medical Technology course (EMT 100) is designed to provide the student with the skills and knowledge to apply for certification as an Emergency Medical Technician and is approved by the Sacramento County Health Department, Division of Emergency Medical Services, and the certifying agency for Sacramento County. EMT 100 course completion is mandatory for all personnel who wish to pursue State certification as an EMT.

EMT certification from Sacramento County Health Department, Division of Emergency Medical Services is the first step to starting a career working on an ambulance. EMT certification is also a pre-employment requirement for most professional fire departments. Together with varying levels of actual on-the-job experience, it is often required for admission to Paramedic training programs throughout the state and country.

EMT State certification has also become an important first step in the career path of students pursuing professions as physicians, registered nurses, physician assistants, and other allied health professions, by offering a distinct advantage in patient assessment and critical interventions skills, as well as the ability to obtain valuable work experience. Cosumnes River College's EMT 100 students will gain actual experience by spending hours off-campus in operating ambulance units and in hospital emergency departments.

Highlights include:
* Hands-on experience administering proper emergency medical care
* Preparation for the EMT state certification test
* Re-certification for EMT state certification
* First step in pursuing a paramedic license
* Hospital emergency room observation time and opportunities to “ride along” in ambulances

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **SLO #1:** Demonstrate and confirm knowledge of current information to work in the field of emergency medicine as an EMT.
- The students will be able to analyze fluid complex medical problems with patients and then apply appropriate patient care based on a standardized decision making process.
- Perform the skills and tasks of patient care and demonstrate proficiency on the basic equipment that EMTs use in the field.
- Demonstrate critical thinking techniques and how to apply them to sick and injured patients in the pre-hospital arena.
- **SLO #2:** Demonstrate and incorporate professional values and standards for medical personnel that the industry requires in pre-hospital emergency medicine.
- Implement and maintain professional appearance and conduct in all aspects of program activities.
- Perform patient assessment and care utilizing a team approach.
- **SLO #3:** Achieve the basic educational requirements for most paramedic programs in the state. Most paramedic programs will require at least 1 year work experience as an EMT on an ambulance as an application requirement for Paramedic school.
- Students will work in field clinical settings alongside experienced medical professionals and will apply skills and knowledge learned in the program.
- Students will complete and pass the State's EMT Certification Written Exam to achieve EMT certification.
- Students will utilize recently learned skills and knowledge and comprehend the need for EMTs to stay current on the most up to date emergency medical information and training.

### Career Information

**EMT; Emergency Room Technician; Fire Service** With additional training: **Firefighter; Rescue Worker; Paramedic; Emergency Medical Dispatcher**

### Emergency Medical Technology (EMT)

**EMT 100 Emergency Medical Technician**

| Units: | 7.5 |
| Hours: | 81 hours LEC; 162 hours LAB |
| Prerequisites: | All EMT 100 students must have an American Heart Association BLS for the Health Care Provider CPR card (required under NHTSA and California Regulations) prior to the first day of class. We will ONLY ACCEPT American Heart Association CPR cards (or eCards) – BLS for the Healthcare Provider from the American Heart Association. Online CPR courses without hands on skills component are NOT accepted. The college will NOT accept Life Guard Training Certificates or EMR (First Responder) Certificates as CPR cards. The student must have a BLS for the Healthcare Provider Cards from the American Heart Association and we no longer accept Red Cross Cards. Please go to Program website for more information on this training - [http://www.crcems.us/program-info/cpr-training/](http://www.crcems.us/program-info/cpr-training/) |
| Enrollment Limitation: | Not open to students with a current California EMT certification (license). California licensed Physicians, RNs, Paramedics, or military trained medics may be allowed to challenge the course under State law. Please check with the Program Director for more information. |
| Advisory: | AH 110 and BIOL 102; Students should take an Anatomy and Physiology course or an EMT Prep course prior to taking EMT 100. Two subject areas of many students struggle with in an Emergency Medical Technician (EMT) program are Medical Terminology and the Human Body topics, especially Cardiology and Neurology. UCLA EMS Education Program offers an Online EMT Prep course: [https://www.cpc.mednet.ucla.edu/course/emt-preparation](https://www.cpc.mednet.ucla.edu/course/emt-preparation) |

**Catalog Date:** June 1, 2020
This course provides instruction to the level of Emergency Medical Technician (Previously called EMT Basic or EMT-I). This course has additional financial costs that are required for clinical components. Topics include: skills necessary to provide emergency medical care at a basic life-support level with a fire, ambulance, or other specialized service. Cosumnes River College's Emergency Medical Technology 100 course is the primary step to provide the student with the skills and knowledge to apply for certification as an Emergency Medical Technician and is approved by the Sacramento County Health Department, Division of Emergency Medical Services, which is the certifying agency for Sacramento County by the State of California. This certification is mandatory for all personnel who wish to pursue a career working on an ambulance. EMT certification is also a pre-employment requirement for most paid fire departments. Together with varying levels of actual on-the-job experience, it is required for admission to paramedic training programs throughout the state and country. EMT students will gain actual clinical experience by spending time off-campus in operating ambulance units and in emergency departments of hospitals. Students will be required to complete background checks and drug screens, purchase uniforms and liability insurance, verify immunizations and have Tb clearance. Other requirements may be necessary for the clinical component of this course. The course requires students to work on an ambulance in the clinical component. Students may not have a beard or any facial hair below the lip to be compliant with OSHA regulations. This course is conducted in compliance with the California Code of Regulations. A final grade "B" or better is required for a course completion certification in this course. This is an intensive medical class that students should possess a strong background in anatomy and physiology as well as medical terminology. Students that do not possess both generally do not succeed in the course. It is STRONGLY recommended that students take a basic anatomy and physiology class as well as a medical terminology class prior to attempting this class. See Advisory. The EMT class has additional non-mandatory hours for quiz reviews and skills practice that students are strongly encouraged to attend. To become Certified (Licensed) as an EMT in California all applicants must be legal citizens, possess a high school diploma (GED), be at least 18 years old, pass background check, and have valid social security number. For more information please go to State EMS office website - www.emsa.ca.gov

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1**: Demonstrate knowledge of current information they need to work in the field of emergency medicine as an EMT.
- Recognize the nature and seriousness of the patient's condition or extent of injuries to assess requirements for appropriate emergency medical care. Identify the symptoms/signs of a major medical and traumatic emergencies in a pre-hospital arena.
- Recognize the indications and demonstrate the techniques for administering medications that are within the EMT-Basic scope of practice.
- Utilize communicating, transporting, and record keeping skills with patient care.
- Demonstrate critical thinking techniques and how to apply them to sick and injured patients in the pre-hospital arena. Perform safely and effectively the standard job expectations of an Emergency Medical Technician.
- Comprehend pathophysiology of common diseases and how they manifest in patients.
- Understand and be able to use basic medical terminology in patient care.
- **SLO #2**: Perform the essential skills and demonstrate proficiency in EMS equipment implementation.
- Demonstrate competency utilizing all emergency medical technician's basic equipment.
- Use appropriate decision making processes in coordinating lifting, extricating, and positioning of the patient to minimize discomfort and prevent further injury.
- Perform safely and effectively in patient care skills of an Emergency Medical Technician.
- **SLO 3#:** Demonstrate professional values, ethics, and standards for emergency medical personnel.
- Work in team approach to patient assessment and care.
- Work in field clinical setting with experienced medical professionals and apply skills and knowledge learned in the course.
- Utilize recently learned skills and knowledge and comprehend the need for EMTs to stay current on the most up to date emergency medical information and training.
- Implement and maintain professional appearance and conduct in all aspects of course activities.
- **SLO #4**: Participate in Prehospital care and emergency department operations for a period of time sufficient to gain an appreciation for the continuum of care. The student must participate in and document patient contacts in a field experience on an ambulance or ER.
- Perform ten patient assessments.
- **SLO #5**: Complete and pass the State's EMT Certification Written Exam required to achieve EMT certification.
EMT 102 Emergency Medical Care Refresher

This course provides continuing education and skills verification modules for current Emergency Medical Technicians (EMTs) certified at the Basic Life Support (BLS) level. It satisfies most of the refresher requirements of local, state and national Emergency Medical Services (EMS) certifying organizations. EMS related topics include airway management and ventilation, cardiac care and resuscitation, patient assessment, injury management, legal and ethical issues, vital signs monitoring and assisting with medication administration. This course is designed for currently California State certified EMT - Basic(I) and meets all state requirements for EMT (I) recertification by Sacramento Emergency Medical Services Agency. BLS (CPR) cards are not issued in the completion of this course. Students that have expired EMT certification should contact the instructor prior to signing up for EMT 102. This course does not provide preparation for the National Registry of Emergency Medical Technicians (NREMT) entry or recertification exam.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: The student will be able to demonstrate knowledge of current information they need to work in the field of emergency medicine as an EMT.
- Recognize the nature and seriousness of the patient's condition or extent of injuries to assess requirements for appropriate emergency medical care.
- Identifying the symptoms/signs of a major medical and traumatic emergencies in a pre-hospital arena.
- Utilize communicating, transporting, and record keeping skills with patient care.
- Recognize the indications and demonstrate the techniques for administering medications and provide updated skills that are within the EMT-Basic scope of practice.
- SLO #2: Utilize, incorporate and demonstrate proficiency in all equipment within the EMT scope of practice in regards to patient care.
- Be able to perform efficient cardiopulmonary resuscitation and AED use utilizing current national standards.
- Competency in demonstrating and utilizing all emergency medical technicians basic equipment.
- Students will use appropriate decision making processes in coordinating lifting, extricating, and positioning of the patient to minimize discomfort and prevent further injury.
- SLO #3: Demonstrate professional values, ethics, and standards for emergency medical personnel.
- Establish and maintain effective communication with patients, family members, rescuers and other health care professionals, utilizing contemporary guidelines.
- Students will work in team approach to patient assessment and care.

EMT 109 Emergency Medical Responder

This course is an introduction to the principles and practices of the Emergency Medical Services (EMS). It provides the knowledge and skills needed to integrate the care provided through the EMS system.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: describe the roles of EMS in the health care system.
- demonstrate the professional attributes expected of EMRs.
- utilize effective communication techniques with patients, bystanders, and other emergency responders in the EMS setting.
- SLO #2: demonstrate life support skills for patients with specific medical and trauma airway conditions.
• perform the duties of an EMR with regard for medical-legal and ethical issues, including functioning under medical direction and within the scope of practice.

• apply principles of anatomy, physiology, pathophysiology, life-span development, and therapeutic communications to the assessment and management of patients.

• SLO #3: identify the need for and perform immediately life-saving interventions to manage a patient's airway, breathing, and circulation.

• assess and manage patients of all ages with a variety of complaints, medical conditions and traumatic injuries.

• apply principles of emergency medical services operations, considerations, multiple casualty incidents, gaining access to and extricating patients, hazardous materials incidents, and responding to situations involving weapons of mass destruction.

EMT 115 Emergency Medical Technician (EMT) Didactic Introduction

Units: 1.5
Hours: 81 hours LAB
Prerequisite: All EMT 115 students must have an American Heart Association BLS for the Health Care Provider CPR card or BLS Provider Card or eCard (required under NHTSA and California Regulations) prior to the first day of class. We will ONLY ACCEPT American Heart Association CPR cards (or eCards) - BLS for the Healthcare Provider BLS Provider from the American Heart Association. Online CPR courses without hands on skills component are NOT accepted. The college will NOT accept Life Guard Training Certificates or EMR (First Responder) Certificates as CPR cards. The student must have a BLS for the Healthcare Provider Cards from the American Heart Association. Red Cross Cards are no longer accepted to meet this requirement. Please go to Program website for more information on this training - http://www.crcems.us/program-info/cpr-training/
Advisory: AH 110 and BIOL 102; These advisories are not required but are only a suggestion for students that do not possess a strong background in Anatomy and Physiology or Medical terminology. Students are advised to take an Anatomy and Physiology course or an EMT Prep course prior to taking EMT 115. Two subject areas many students struggle with in an Emergency Medical Technician (EMT) program are Medical Terminology and the Human Body topics, especially Cardiology and Neurology. Other Justification: EMT is an intense Medical class with low student success for students that are not proficient in Human Anatomy and Medical terminology.
Catalog Date: June 1, 2020

This 8-week course provides the first step of instruction to the level of Emergency Medical Technician (Previously called EMT Basic or EMT-I). This course has additional financial costs that are required for clinical components. Topics include skills necessary to provide emergency medical care at a basic life-support level with a fire, ambulance, or other specialized services. Cosumnes River College's Emergency Medical Technology EMT 115 course is the first step to provide the student with the skills and knowledge to apply for certification as an Emergency Medical Technician. Students must successfully complete EMT 115, EMT 116 and EMT 117 (taken in the same semester) to take the National testing to become a Certified (Licensed) EMT in the State of California. This course is approved by the Sacramento County Health Department, Division of Emergency Medical Services, which is the certifying agency for Sacramento County by the State of California's EMS Agency. This EMT state certification is mandatory for all personnel who wish to pursue a career working on an ambulance. EMT certification is also a pre-employment requirement for most paid fire departments. Together with varying levels of actual on-the-job experience, it is required for admission to paramedic training programs throughout the state and country. EMT 115 prepares the EMT students to gain the required medical and operational EMS knowledge to work in the field. EMT 116 and EMT 117 (second 8-week courses - taken concurrently in same semester) cover the EMS skills and Experience by spending time off-campus in operating ambulance units and in emergency departments of hospitals. For classes, EMT 116 and EMT 117 students will be required to complete background checks and drug screenings, purchase uniforms, and liability insurance verify immunizations and have Tb clearance. Other requirements may be necessary for the clinical component of this course. These courses require students to work on an ambulance in the clinical component. Students may not have a beard or any facial hair below the lip to be compliant with OSHA regulations. This course is conducted in compliance with the California Code of Regulations. Students must maintain 80% on all testing or better for a course completion certification in this course. This is an intensive medical class so students should possess a strong background in anatomy and physiology as well as medical terminology. Students that do not possess both generally do not succeed in the course. It is STRONGLY recommended that students take a basic anatomy and physiology class as well as a medical terminology class prior to attempting this class. See Advisory. The EMT class has additional non-mandatory hours for quiz reviews and skills practice that students are strongly encouraged to attend. For more information please go to State EMS office website - www.emsa.ca.gov. This course follows the U.S. Department of Transportation (DOT) National EMS Education Standards (DOT HS 811 077A, January 2009). See Program Website: https://www.crcems.us. All requirements will be discussed on the first class day. Students need the required American Heart Association BLS Provider CPR course and should read as much of the EMT textbook as possible before the first class day. For questions please contact the EMS program coordinator: Matthew McHugh.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: Demonstrate current knowledge in the national standards of EMS patient care to work in the field of emergency medicine as an EMT.

• Recognize the nature and seriousness of the patient's condition or extent of injuries to assess requirements for appropriate emergency medical care.
Identify the symptoms/signs of a major medical and traumatic emergencies in a pre-hospital arena.

Recognize the indications and demonstrate the techniques for administering medications that are within the EMT-Basic scope of practice.

Utilize communicating, transporting, and record keeping skills with patient care.

Demonstrate critical thinking techniques and how to apply them to sick and injured patients in the pre-hospital arena.

Perform safely and effectively the standard job expectations of an Emergency Medical Technician.

Understand and be able to use basic medical terminology in patient care.

SLO #2: Perform the essential patient assessment, skills and demonstrate proficiency in EMS equipment use and implementation.

Demonstrate competency utilizing all emergency medical technician's basic equipment.

Demonstrate and perform appropriate patient assessment and care for sick and injured patients.

Use appropriate decision making processes in coordinating lifting, loading, extricating, and positioning of the patient to minimize discomfort and prevent further injury.

Perform safely and effectively in patient care skills of an Emergency Medical Technician.

SLO #3: Demonstrate professional values, ethics, and standards for emergency medical personnel.

Work in team approach to patient assessment and care.

Implement and maintain professional appearance and conduct in all aspects of course activities.

---

EMT 116 Emergency Medical Technician (EMT) Didactic

**Conclusion**

**SLO #1:** Identify the symptoms/signs of a major medical and traumatic emergencies in a pre-hospital arena.

**Units:** 5

**Hours:** 81 hours LEC; 36 hours LAB

**Prerequisite:**

- EMT 115 with a grade of “C” or better
- All EMT 116 students must have met all the Class requirements listed in the EMT 115 syllabus to move on to EMT 116.
- The students must take EMT 115 and EMT 116 and EMT 117 in the same semester to meet the course and clinical requirements of the program to receive a State Approved Course Completion for EMT State of California Certification/License.
- Students must have and maintain an American Heart Association BLS for the Healthcare Provider CPR card or BLS Provider Card or eCard (required under NHTSA and California Regulations) prior to the first day of class.
- We will ONLY ACCEPT American Heart Association CPR cards (or eCards) – BLS for the Healthcare Provider BLS Provider from the American Heart Association.
- Online CPR courses without hands on skills component are NOT accepted.
- The college will NOT accept Lifeguard Training Certificates or EMR (First Responder) Certificates as CPR cards. The student must have a BLS for the Healthcare Provider Cards from the American Heart Association and we no longer accept Red Cross Cards.

**Catalog Date:**

June 1, 2020

This 8 week course provides instruction to the level of Emergency Medical Technician (Previously called EMT Basic or EMT-I).

This course must be taken in sequence with EMT 115 (first 8 week course) in the same semester. This course has additional financial costs that are required for clinical components. Topics include skills necessary to provide emergency medical care at a basic life-support level with a fire, ambulance, or other specialized services. Cosumnes River College’s Emergency Medical Technology EMT 116 (along with EMT 115) courses are the primary step to provide the student with the skills and knowledge to apply for certification as an Emergency Medical Technician and is approved by the Sacramento County Health Department, Division of Emergency Medical Services, which is the certifying agency for Sacramento County by the State of California. This certification is mandatory for all personnel who wish to pursue a career working on an ambulance. EMT certification is also a pre-employment requirement for most paid fire departments. Together with varying levels of actual on-the-job experience, it is required for admission to paramedic training programs throughout the state and country. EMT students will gain actual clinical experience by spending time off-campus in operating ambulance units and in emergency departments of hospitals. Students will be required to complete background checks and drug screenings, purchase uniforms and liability insurance, verify immunizations and have Tb clearance. Other requirements may be necessary for the clinical component of this course. The course requires students to work on an ambulance in the clinical component. Students may not have a beard or any facial hair below the lip to be compliant with OSHA regulations. This course is conducted in compliance with the California Code of Regulations. A final grade 80% or better is required for a course completion certification in this course. This is an intensive medical class that students should possess a strong background in anatomy and physiology as well as medical terminology. <td>Prerequisite:</td>
<td>EMT 115 with a grade of “C” or better; Students must meet all syllabus requirements in EMT 115 to advance to EMT 116 and EMT 117. The following requirements must be complete prior to the start of Clinical hours for EMT 116 and EMT 117: 1. The student must acquire the Student Access Card or an Official College Photo ID Card with ID holder stating EMT student. This ID must be worn as part of the uniform for clinical hours; 2. An approved Clinical uniform: all students going to clinical will be required to purchase an EMT 100 T-shirt and have dark blue work pants; 3. Criminal background checks with drug screen; 4. Blood borne pathogens training; 5. Immunization verification; 6. TB clearance: All students must have a verification of 2 step TB clearance no more than 2 months prior to the beginning of clinical; 7. A current American Health Association BLS Provider Card or eCard (required under the National Health Traffic Safety Association and California Regulations). Only the AHA BLS Provider Card or eCard is acceptable, as Online CPR courses without hands on skills component, or Lifeguard Training Certificates or EMR (First Responder) are NOT acceptable. Please go to Program website for more information on this training - <a href="http://www.crcems.us/program-info/cpr-training">http://www.crcems.us/program-info/cpr-training</a>; 8. Any other clinical requirement by the hospitals or EMS agencies; 9. A student must bring a watch with a seconds display each day to class; 10. A student must have the PPE, and other EMT equipment to participate in clinical hours. All of these requirements are a prerequisite for health and safety as mandated in Title 22, Division 9, Chapter 2 of the California Code of Regulations. Students must take EMT 115 in the same semester as EMT 116 and EMT 117 to meet clinical requirements to be successful in the program.</td>

This 8-week course provides instruction to the level of Emergency Medical Technician (Previously called EMT Basic or EMT-I). This course must be taken in sequence with EMT 115 (first 8-week course) and concurrent with EMT 116 (second 8-week course) in the same semester. This course requires students to complete ride along in ambulances and clinical hands on skills at Emergency Rooms of Hospitals. This course has additional financial costs that are required for clinical components. Topics include skills necessary to provide emergency medical care at a basic life-support level with a fire, ambulance, or other specialized services. Cosumnes River College's Emergency Medical Technology EMT 116 and EMT 117 (along with EMT 115) courses are the primary step to provide the student with the skills and knowledge to apply for certification as an Emergency Medical Technician and is approved by the Sacramento County Health Department, Division of Emergency Medical Services, which is the certifying agency for Sacramento County by the State of California. This certification is mandatory for all personnel who wish to pursue a career working on an ambulance. EMT certification is also a pre-employment requirement for most paid fire departments. EMT students will gain actual clinical experience by spending time off-campus in operating ambulance units and in emergency departments of hospitals. Students will be required to complete background checks and drug screenings, purchase uniforms and liability insurance, verify immunizations and have Tb clearance. Other requirements may be necessary for the clinical component of this course. The course requires students to work on an ambulance in the clinical component. Students may not have a beard or any facial hair below the lip to be compliant with OSHA regulations. This course is conducted in compliance with the California Code of Regulations. A final grade 80% or better is required for a course completion certification in this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Demonstrate current knowledge in the national standards of EMS patient care to work in the field of emergency medicine as an EMT.
- Recognize the nature and seriousness of the patient's condition or extent of injuries to assess requirements for appropriate emergency medical care.
- Identify the symptoms/signs of a major medical and traumatic emergencies in a pre-hospital arena.
- Recognize the indications and demonstrate the techniques for administering medications that are within the EMT scope of practice.
- Utilize communicating, transporting, and record keeping skills with patient care.
- Demonstrate critical thinking techniques and how to apply them to sick and injured patients in the pre-hospital arena.
- Perform safely and effectively the standard job expectations of an Emergency Medical Technician.
- Understand and be able to use basic medical terminology in patient care.
- SLO #2: Perform the essential patient assessment, skills, and demonstrate proficiency in EMS equipment use and implementation.
- Demonstrate competency utilizing all emergency medical technician's basic equipment.
- Demonstrate and perform appropriate patient assessment and care for sick and injured patients.
- Use appropriate decision making processes in coordinating lifting, loading, extricating, and positioning of the patient to minimize discomfort and prevent further injury.
- Perform safely and effectively in patient care skills of an Emergency Medical Technician.
- SLO #3: Demonstrate professional values, ethics, and standards for emergency medical personnel.
- Work in team approach to patient assessment and care.
- Work in field clinical setting with experienced medical professionals and apply skills and knowledge learned in the course.
- Utilize recently learned skills and knowledge and comprehend the need for EMTs to stay current on the most up to date emergency medical information and training.
- Implement and maintain professional appearance and conduct in all aspects of course activities.
- SLO #4: Participate in Prehospital care and emergency department operations for a period of time sufficient to gain an appreciation for the continuum of care. The student must participate in and document patient contacts in a field experience on an ambulance or ER.
- Perform no less than ten patient assessments.

EMT 298 Work Experience in Emergency Medical Technology
This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE’S CAREER (SLO 1)**
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.

- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE’S CAREER (SLO 2)**
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.

- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR (SLO 3)**

**Units:** 1 - 4  
**Hours:** 60 - 300 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Emergency Medical Technology.  
**General Education:** AA/AS Area III(b)  
**Catalog Date:** June 1, 2020
Engineering | Cosumnes River College

Engineering involves the application of scientific and mathematical principles used in design and in the solution of practical technical problems. CRC's program provides the foundation in mathematics, physics, and engineering necessary to transfer to a university and complete a Bachelor of Science degree in Engineering. However, because the lower division requirements of universities vary, the student should check the transfer university's catalog to be sure he/she meets its specific requirements. See a CRC counselor for assistance.

Associate Degrees

A.S. in Engineering - Civil/Mechanical Option

Pre-Professional Transfer Opportunities
CRC's program provides the foundation in mathematics, physics, and engineering necessary to transfer to a university and complete a bachelor's degree in engineering. Engineering involves the application of scientific and mathematical principles needed to solve practical technical problems. Although the first two years of engineering courses for all engineering degrees are similar, students should consult the lower division requirements of the institution to which they wish to transfer.

Highlights include:
* Challenging and rewarding classes that transfer to four-year universities
* A Mathematics, Engineering and Science Achievement (MESA) program

Note to Transfer Students:
If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

When choosing whether to take the suggested electives, check university requirements; these courses may be required at some universities.

1Check specific university requirements before choosing a course

The Engineering - Civil/Mechanical Option Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Career Information

Aerospace Engineer; Architectural Engineer; Chemical Engineer; Civil Engineer; Computer Engineer; Electrical Engineer; Mechanical Engineer, and other types of engineers Most career options require a B.S. degree.

The Engineering - Electrical/Computer Option Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.

Career Information

Aerospace Engineer; Architectural Engineer; Chemical Engineer; Civil Engineer; Computer Engineer; Electrical Engineer; Mechanical Engineer, and other types of engineers Most career options require a B.S. degree.

A.S. in General Science

Areas of Study include:

- Physical Anthropology
- Astronomy
- Biology
- Chemistry
- Engineering
- Physical Geography
- Geology
- Physics

Eighteen (18) units of transfer level course work in science is required. Two laboratory courses must be included: one in the physical sciences and one in the biological sciences. Courses may be selected from astronomy, biology, chemistry, geology, physical geography, physical anthropology, and physics. The student, in consultation with a counselor, should choose science courses to meet his or her program, transfer, or general education requirements.

Students interested in transferring to a four-year university with a science major are encouraged to complete a science AS or AS-T degree such as Anthropology, Biology, Chemistry, Engineering, Geography, Geology, or Physics. This General Science degree may not include the majors-level transfer courses needed for many science majors. Students are strongly recommended to see a counselor for guidance.

### Engineering (ENGR)

#### ENGR 300 Introduction to Engineering

- **Units:** 1
- **Hours:** 18 hours LEC
- **Prerequisite:** None.
- **Transferable:** CSU; UC
- **Catalog Date:** June 1, 2020

This course will provide students with information to evaluate the engineering profession as a personal career choice. Students will explore the branches of engineering and the different types of work that engineers do. Participants will investigate personal characteristics which contribute to being happy and successful engineers, and will examine their own traits. They will learn what preparation is needed and strategies for successful completion. Course participants will appreciate the role of engineers in society and understand the responsibilities of engineers in their service to society.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO#1 – DESCRIBE ASPECTS OF ENGINEERING AS A PROFESSION**
  - describe different branches of engineering
  - describe different types of work functions performed by engineers
  - explain the responsibility of engineers to their clients

- **SLO#2 – ASSESS ENGINEERING AS A SUITABLE PERSONAL CAREER CHOICE**
  - investigate personal characteristics which contribute to satisfaction and success in engineering and compare them to their own traits

- **SLO#3 – UNDERSTAND THE REQUIREMENTS FOR BECOMING AN ENGINEER**
  - ascertain the requirements for different engineering majors at different universities
  - create a personal education plan to become an engineer
  - describe and perform behaviors that will support success in becoming an engineer
ENGR 304 How Things Work

This course covers how everyday things and technologies operate and is designed primarily for non-science students or anyone interested in learning about technology. The basic scientific principles behind the technology will be explored. Systems studied will include mechanical, electrical, thermal, optical and others. Students will gain hands-on experience with basic machines and technologies during lab.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- APPLY THE SCIENTIFIC METHOD TO DEMONSTRATE HOW MODERN TECHNOLOGY WORKS AND IS DEVELOPED. (SLO 1)
- identify the scientific principles used in common engineering systems.
- CONSTRUCT A SCIENTIFIC ANALYSIS OF AN ENGINEERING SYSTEM THAT THE STUDENT ENCOUNTERS ROUTINELY. (SLO 2)
- analyze a system and break it down into simpler components and explain how the components interface to create a desired result.
- Build basic machines or technologies and investigate hands-on how things function
- DEMONSTRATE AN INCREASED SCIENTIFIC AND TECHNICAL LITERACY, INCLUDING AN INCREASED TECHNICAL VOCABULARY. (SLO 3)
- critique common scientific misconceptions regarding technology.
- SOLVE ENGINEERING PROBLEMS THAT REQUIRE CRITICAL THINKING TO COMPLETE. (SLO 4)

ENGR 312 Engineering Graphics

Students will learn the graphical tools needed to develop and communicate engineering ideas. They will learn to represent objects in technical drawings (orthographic projection). Students will create drawings using computer aided drafting software (two-dimensional). They will solve civil engineering problems using grade, bearing, scales, topographical maps, and plan and profile views. Students will use three-dimensional solid modeling software to create models of mechanical objects from which they will make drawings. Students will learn the steps in engineering design, and will complete a design project which will culminate in detail and assembly drawings. This course is primarily for Mechanical and Civil Engineering majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO#1 - CREATE AND USE TECHNICAL DRAWINGS USING TWO DIMENSIONAL COMPUTER SOFTWARE
  - represent objects completely in fully dimensioned orthographic projections
  - construct isometric drawings
  - determine the true length, grade, and bearing of scaled features
  - construct plan and profile drawings for civil engineering applications
  - construct a set of working drawings
- SLO#2 - CREATE AND USE THREE DIMENSIONAL SOLID MODELS

Units: 3
Hours: 36 hours LEC; 72 hours LAB
Prerequisite: Completion of MATH 110 or high school geometry with a grade of C or better; and MATH 120 with a grade of C or better.
Advisory: CSU; UC
Transferable: June 1, 2020
Catalog Date: June 1, 2020

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: MATH 100
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; CSU Area B3
Catalog Date: June 1, 2020
ENGR 400 Introduction to Electrical Circuits and Devices

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO#1 - ANALYZE ELECTRIC CIRCUITS FOR DC, TRANSIENT, AND AC VOLTAGE AND CURRENT RESPONSES
- understand and apply various analysis techniques such as nodal analysis, loop analysis, superposition, source transformations, and Thevenin and Norton equivalents
- evaluate different analysis techniques and choose an appropriate technique for a particular circuit
- in circuits with step functions applied, solve for transient, forced, and complete response
- use phasors and impedances to analyze AC circuits
- SLO#2 - APPLY A SIMPLE MODEL FOR OPERATIONAL AMPLIFIERS TO SOLVE SIMPLE CIRCUITS
- SLO#3 - USE MULTIMETERS, SIGNAL GENERATORS, AND OSCILLOSCOPES
- SLO#4 - CALCULATE POWER IN DC AND AC CIRCUITS
- perform conservation of power checks
- apply the concepts of complex power to analyze AC circuits
- analyze Y-Y connected balanced three phase circuits

ENGR 412 Properties of Materials

Student Learning Outcomes

This is an introductory course on the relationship of the internal structure of materials to their properties. Topics include crystalline structure, imperfections, phases and phase diagrams, steels and non-ferrous alloys, polymers, ceramics, semiconductors, and corrosion. Students will apply the concepts in laboratory activities and will use typical materials testing equipment and analysis techniques. This course is required for CRC’s A.S.-Engineering, Civil/Mechanical Engineering option degree, and many university engineering B.S. degrees.
Upon completion of this course, the student will be able to:

- SLO1: RELATE THE PROPERTIES OF A MATERIAL TO ITS STRUCTURE ON A SUB-MICROSCOPIC SCALE.
  - Construct models of crystalline structures and explain how the structure's characteristics affect a material's properties.
  - Distinguish between the types of imperfections that occur in crystalline structures and compare their effects on a material's properties.
  - Describe different strengthening mechanisms and compare their effects.
  - Relate typical properties of polymers and ceramics to their molecular and crystalline or amorphous structures.
  - Describe the mechanism for electrical conduction in metals and semiconductors.

- SLO2: INTERPRET BINARY PHASE DIAGRAMS.
  - Perform analysis involving different compositions, temperature, and phases.
  - Analyze eutectic and eutectoid reactions and the microconstituents that result.

- SLO3: CHARACTERIZE MATERIAL PROPERTIES.
  - Perform tension, compression, and hardness tests, and interpret the results.

- SLO4: DESCRIBE, SPECIFY, AND COMPARE DIFFERENT PROCESSES FOR FORMING OR TRANSFORMING MATERIALS.
  - Calculate rates of steady-state diffusion.
  - Specify processes involving cold work and annealing that provide specified properties.
  - Describe solidification processes and the microstructures that result when casting metals.
  - Compare different thermal processes for strengthening steel and aluminum alloys, the microstructures that result, and their effect on strength.
  - Mix, pour, and test concrete.
  - Describe different forming processes for ceramics.

- SLO5: IDENTIFY AND DESCRIBE DIFFERENT FAILURE MECHANISMS AND APPROACHES TO PREVENTION.
  - Identify and describe ductile and brittle fracture, fatigue, and creep.
  - Differentiate between different corrosion mechanisms and choose appropriate ways to prevent corrosion.

- SLO6: CONDUCT LABORATORY INVESTIGATIONS AND EXHIBIT PROFESSIONALISM
  - Produce and analyze data, discuss results, draw conclusions.
  - Write well organized reports that demonstrate good technical writing skills and professional appearance.
  - Demonstrate good practice and professional behavior (showing appropriate respect for people and equipment), including safety precautions, in lab work.
  - Behave ethically in collaboration with others and in the use of assistance obtained outside the context of class.

### ENGR 420 Statics

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** MATH 401 and PHYS 411 with grades of "C" or better  
**Transferable:** CSU; UC  
**C-ID:** C-ID ENGR 130  
**Catalog Date:** June 1, 2020

This course covers analysis of two and three dimensional force systems for bodies in static equilibrium. Vector and scalar analysis methods address forces acting on rigid bodies, trusses, frames, and machines. Students will calculate internal forces in members and will create shear and bending moment diagrams for beams. Friction problems will include slipping vs tipping. Students will learn methods to calculate centroids and moments of inertia for bodies that are combinations of simple geometric shapes. This course is required for most engineering majors.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• SLO#1 - REDUCE SYSTEMS OF FORCES TO ONE EQUIVALENT FORCE, OR ONE FORCE AND ONE COUPLE.
transform information describing forces in a variety of formats into Cartesian vectors
• calculate moments of forces and couples using scalar and vector approaches

• SLO#2 - ANALYZE OBJECTS IN STATIC EQUILIBRIUM FOR EXTERNAL FORCES
• characterize reactions at supports for two and three dimensional objects
draw free body diagrams for particles, rigid bodies, and members of frames and machines
formulate and solve equilibrium equations for forces on particles, rigid bodies, and members of frames and machines in two and three dimensions

• SLO#3 - DETERMINE INTERNAL FORCES
• apply Method of Joints and Method of Sections to find forces in truss members
determine axial, shear, and bending moment at specified points in rigid bodies
produce explicit functions for shear and bending moment in beams
construct shear and bending moment diagrams for beams

• SLO#4 - ANALYZE SYSTEMS THAT INCLUDE DRY FRICTION
• solve for forces in problems that include impending motion, no impending motion, and slipping vs. tipping

• SLO#5 - DETERMINE GEOMETRICAL PROPERTIES OF COMPOSITE BODIES
calculate centroids for two and three dimensional composite bodies
calculate moments of inertia for two and three dimensional composite bodies

ENGR 495 Independent Studies in Engineering

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

• Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

• Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

• Use information resources to gather discipline-specific information.

• SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

• Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

• Explain the importance of the major discipline of study in the broader picture of society.

• SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

• Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
ENGR 498 Work Experience in Engineering

**Units:** 1 - 4  
**Hours:** 60 - 300 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position or job related to career goals in Engineering.  
**Transferable:** CSU  
**General Education:** AA/AS Area III(b)  
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer level degree occupational programs. Course content includes understanding the application of education to the workforce; completion of required forms which document the student's progress and hours spent at the work site; and developing workplace skills and competencies. Appropriate level learning objectives are established by the student and the employer. During the semester, the student is required to participate in a weekly orientation and 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. Work Experience may be taken for a total of 16 units when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE AN UNDERSTANDING AND APPLICATION OF PROFESSIONAL WORKPLACE BEHAVIOR IN A FIELD OF STUDY RELATED ONE'S CAREER.(SLO 1)**
  - Understand the effects time, stress, and organizational management have on performance.
  - Demonstrate an understanding of consistently practicing ethics and confidentiality in a workplace.
  - Examine the career/life planning process and relate its relevancy to the student.
  - Demonstrate an understanding of basic communication tools and their appropriate use.
  - Demonstrate an understanding of workplace etiquette.

- **DESCRIBE THE CAREER/LIFE PLANNING PROCESS AND RELATE ITS RELEVANCY TO ONE'S CAREER.(SLO 2)**
  - Link personal goals to long term achievement.
  - Display an understanding of creating a professional first impression.
  - Understand how networking is a powerful job search tool.
  - Understand necessary elements of a résumé.
  - Understand the importance of interview preparation.
  - Identify how continual learning increases career success.

- **DEMONSTRATE APPLICATION OF INDUSTRY KNOWLEDGE AND THEORETICAL CONCEPTS AS WRITTEN IN LEARNING OBJECTIVES IN PARTNERSHIP WITH THE EMPLOYER WORK SITE SUPERVISOR.(SLO 3)**
“Anyone who has read a great deal can imagine the new world that opened. Let me tell you something: from then until I left that prison, in every free moment I had, if I was not reading in the library, I was reading on my bunk. You couldn't have gotten me out of books with a wedge... Up to then, I never had been so truly free in my life.” — Malcolm X

The CRC English Department teaches universal skills applicable in multiple fields and disciplines. Today's business leaders want to hire colleagues who understand the human experience from a variety of perspectives and who have the skills to read detailed instructions and construct logical, persuasive reports. As Stanford University states, “Careers no longer follow the linear paths that they have for previous generations... The skills you [develop] as an English major... prepare you for a range of possible careers.” No matter where you plan to transfer, this degree will give you the skills and flexibility to follow your heart toward any number of dynamic careers.

Dean

Associate Degrees for Transfer

A.A.-T. in English

The Associate in Arts in English for Transfer Degree (AA-T) is designed to provide a seamless transfer pathway for students interested in pursuing at least one English degree option in the California State University (CSU) system. Students must complete the core curriculum and electives to meet a total of 60 transferable units with a minimum 2.0 GPA, which includes the CSU General Education Breadth or the Intersegmental General Education Transfer Curriculum (IGETC) pattern. Students must also earn a grade of C or better in all the courses for the major as described in the Required Program. Upon successful completion of the degree requirements, students will be guaranteed admission to the CSU system with junior status and will not have to repeat lower division coursework. Students are encouraged to meet with a counselor to develop their educational plans as degree options and general education requirements vary for each university.

Catalog Date: June 1, 2020

The Associate in Arts in English for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- function successfully and completely at the university, in the workplace, and in diverse cultural settings with the academic literacy skills they have obtained. (P-SLO #1: Diversity)
- recognize the ethical implications of various modes of communication and the need to use this knowledge responsibly. (P-SLO #2: Ethics)
• become self-reliant, evaluative readers and writers, able to use critical thinking skills to read and write effectively and in academic and workplace settings. (P-SLO #3: Critical thinking)

• develop academic literacy skills, to utilize reading and writing processes, to find and comprehend information, and to apply that knowledge in myriad rhetorical situations. (P-SLO #4: Analytical thinking)

• obtain the necessary reading and writing skills for university-level courses. (P-SLO #5: Communication)

Career Information

The AA-T in English can provide students with the foundational knowledge necessary for transfer to a 4-year Bachelor of Arts (BA) degree program. Career opportunities for students who have earned BS or BA degrees in English include but are not limited to: Advertising; Business; Civil Servant; Columnist/Journalist; Contract Specialist; Editor/Evaluator; Information Specialist; Insurance; Interpreter; Lawyer; Lexicographer; Legislative Assistant; Librarian; Manager; Methods Analyst; Program Developer; Public Relations; Publisher; Researcher; Teacher; Technical Writer; Writing Consultant. Some careers may require additional training.

NOTE TO TRANSFER STUDENTS: The Associate Degree for Transfer program is designed for students who plan to transfer to a campus of the California State University (CSU). Other than the required core, the courses you choose to complete this degree will depend to some extent on the selected CSU for transfer. In addition, some CSU-GE Breadth or IGETC requirements can also be completed using courses required for this associate degree for transfer major (known as “double-counting”). Meeting with a counselor to determine the most appropriate course choices will facilitate efficient completion of your transfer requirements. For students wishing to transfer to other universities (UC System, private, or out-of-state), the Associate Degree for Transfer may not provide adequate preparation for upper-division transfer admissions; it is critical that you meet with a CRC counselor to select and plan the courses for the major, as programs vary widely in terms of the required preparation.

Associate Degrees

A.A. in English

Anyone who has read a great deal can imagine the new world that opened. Let me tell you something: from then until I left that prison, in every free moment I had, if I was not reading in the library, I was reading on my bunk. You couldn't have gotten me out of books with a wedge … Up to then, I never had been so truly free in my life” ~ Malcolm X.

The CRC English department teaches skills that are universal to every other discipline. Taking courses in English increases the student's chances of success in every other area the student chooses to pursue. The ability to read effectively and to write expressively will prove invaluable for any CRC student.

The English major offers courses in literature, composition, and creative writing designed to enhance communication skills, deepen cultural awareness, provide a breadth of knowledge appropriate for many degree and vocational programs, and prepare students for transfer to four-year institutions, and for a baccalaureate major in English or related majors.

HIGHLIGHTS

*Numerous composition and literature courses
*Composition designed for all levels of ability
*Creative writing and writing for publication
*Exemplary faculty: creative, dedicated and innovative

NOTE TO TRANSFER STUDENTS: If you are interested in transferring to a four-year college or university to pursue a bachelor's degree in this major, it is critical that you meet with a CRC counselor to select and plan the courses for your major. Schools vary widely in terms of the required preparation. The courses that CRC requires for an Associate's degree in this major may be different from the requirements needed for the Bachelor's degree.

- ENGLT 402 | Introduction to Shakespeare and Film (3) |

**Total Units:** 24

*The English Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See CRC graduation requirements.*

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- function successfully and completely at the university, in the workplace, and in diverse cultural settings with the academic literacy skills they have obtained. (P-SLO #1: Diversity)

- recognize the ethical implications of various modes of communication and the need to use this knowledge responsibly. (P-SLO #2: Ethics)

- become self-reliant, evaluative readers and writers, able to use critical thinking skills to read and write effectively and in academic and workplace settings. (P-SLO #3: Critical thinking)

- develop academic literacy skills, to utilize reading and writing processes, to find and comprehend information, and to apply that knowledge in myriad rhetorical situations. (P-SLO #4: Analytical thinking)

- obtain the necessary reading and writing skills for university-level courses. (P-SLO #5: Communication)
English - Creative Writing (ENGCW)

ENGCW 400 Creative Writing

This course is designed to guide students in creative writing through experience in three genres: short story, poetry, and creative non-fiction. The course includes analysis of literary models (professional writings in each genre), individual and class criticism of work in a workshop mode, and lecture on and discussion of literary techniques in each genre.

Upon completion of this course, the student will be able to:

- **BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, P-SLO #3)**
- Demonstrate the ability to revise effectively his/her own writing using critical thinking skills.
- **DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS. (SLO #2, P-SLO #4)**
- Demonstrate an understanding of the use of literacy concepts in professional imaginative writing, such as point-of-view and unexpressed thinking for creative non-fiction, imagery and persona for poetry, and plot conflict in short fiction.
- **OBTAIN THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES. (SLO #2, P-SLO #5)**
- Demonstrate the ability to compose one short story or part of a novel, a substantial amount of poetry, and one piece of creative non-fiction.
- Demonstrate the ability in group discussion and/or in writing to analyze other students' writing, providing both critical praise and suggestions for improvement.

ENGCW 410 Fiction Writing Workshop

This is a creative writing course designed for students who wish to concentrate on fiction writing. Through lecture, discussion, assigned reading, writing exercises, short story (or novel chapter) writing, and critiques of student writing in a workshop mode, the student will examine critically the elements of literary creation. The students will keep a journal and prepare a portfolio of their work.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, P-SLO #3)**
- Demonstrate the ability to revise effectively his/her own writing using critical thinking skills.
Demonstrate the ability in group discussion and/or in writing to analyze other students’ writing, providing both critical praise and suggestions for improvement.

DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS. (SLO #2, P-SLO #4)

Demonstrate an understanding of the use of literary concepts in professional imaginative writing.

OBTAIN THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES. (SLO #3, P-SLO #5)

Demonstrate the ability to compose two short fiction stories.

ENGCW 420 Poetry Writing Workshop

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of “C” or better, or placement through the assessment process.
Transferable: CSU; UC (ENGCW 400, 410, 420, or 430 combined: maximum transfer credit is two courses)
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This is a creative writing course for students who wish to concentrate on poetry writing. Through lecture, discussion, assigned reading, writing exercises, poetry writing, and critiques of student writing in a workshop mode, the students will examine critically the elements of literary creation. The students will keep a journal and prepare a portfolio of their work.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- BE SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS (SLO #1; PSLO #3).

- recognize some of the aesthetic factors which characterize well-written poetry, such as thoughtful line breaks and a reliance on specific images rather than on general statement as a way to communicate meaning.

- DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS (SLO# 2; PSLO# 4).

- analyze in group discussion and/or writing other students’ poems, providing both critical praise and suggestions for improvement.

- OBTAIN THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES (SLO# 3; PSLO# 5).

- effectively revise their own writing using critical thinking skills in an effort to incorporate such aesthetics into their own poems.

ENGCW 430 Creative Non-Fiction Writing Workshop

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of “C” or better, or placement through the assessment process.
Transferable: CSU; UC (ENGCW 400, 410, 420, or 430 combined: maximum transfer credit is two courses)
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This is a creative writing course concentrating on the literary essay. The class focuses on constructive in-class analysis of personal essays written by students. Students will write and critically examine essays such as the memoir, autobiography, reflective, and philosophical that have a literary, stylistic component. The class will also emphasize multi-cultural, multi-generational, mythological, and ecological topics. Students will prepare a portfolio of completed work.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, P-SLO #3)

- learn methods of revision and apply them to their own work.
ENGCW 452 College Literary Magazine

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ENGWR 101, or placement through the assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

Obtain hands-on experience as an editor for a nationally distributed and award-winning literary journal. Write, select, and edit manuscripts in the genres of poetry, short fiction, and creative non-fiction. Correspond with established authors and artists to create the campus's annual literary journal. Learn to use a submission manager and obtain tips on publishing your writing from the editor's point of view.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, P-SLO #3)
- gain increased opportunity for creative expression in writing and art.
- DEVELOP ACADEMIC LITERACY SKILLS, UTILIZE READING AND WRITING PROCESSES, FIND AND COMPREHEND INFORMATION, AND APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS. (SLO #2, P-SLO #4)
- develop reading, writing, and oral expression skills along with critiquing and critical thinking skills.
- OBTAIN THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES. (SLO #3, P-SLO #5)
- see completion of writing process from creation of manuscript to publication in a magazine.
- RECOGNIZE THE ETHICAL IMPLICATIONS OF VARIOUS MODES OF COMMUNICATION AND THE NEED TO USE THIS KNOWLEDGE RESPONSIBLY. (SLO #4, P-SLO #2)
- assemble the contents of the annual literary magazine.
- encourage others from the community to contribute manuscripts and art.
- develop individual and group leadership skills.

ENGCW 480 Honors Seminar: Creative Writing and Culture

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of “C” or better, or placement through the assessment process.
Transferable: CSU
General Education: AA/AS Area I; CSU Area C2
Catalog Date: June 1, 2020
This course is an honors seminar for students who wish to write fiction and to do so with an awareness of fiction's role in culture. Students will study the relationship between cultural events and literary conventions: connections, for example, between World War II and Hemingway's concise sentences, the birth of jazz and the language of the beatniks, Existentialism and Ralph Ellison's view of character, or the systematic repression of Native American languages and Joy Harjo's fluid syntax. While students become familiar with the history and cultural place of fiction, they will be writing and analyzing fiction of their own. Students will be encouraged both to "write from instinct" and to begin deliberately cultivating a style, identifying personal influences, and situating their writing in relation to major cultural events. This course may be taken only once for credit. Enrollment is limited to Honors Program students. Details about the Honors Program can be found in the front of the Catalog and on the CRC website.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS.** (SLO #1, P-SLO #3)

- interpret and discuss fiction in terms of its historical and cultural context.

- play creatively with sentences and push the limits of standard grammar.

- discuss their own fiction--its content and style--in terms of literary influences and historical events.

- **DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS.** (SLO #2, P-SLO #4)

- read aloud with a sensitivity to the sounds and rhythms of words and sentences.

- write fiction of a higher quality than when they entered the course: giving greater attention to details, strategically pacing their stories, evoking emotions from their readers, and creating complex, believable characters.

- **OBTAIN THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES.** (SLO #3, P-SLO #5)

- identify the conventional parts of fiction--character, plot, narrator, irony, metaphor etc.--and explain the major historical shifts in the definitions and functions of these terms.

ENGCW 495 Independent Studies in English - Creative Writing

| Units: | 1 - 3 |
| Hours: | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

- Use information resources to gather discipline-specific information.

- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

- Explain the importance of the major discipline of study in the broader picture of society.

- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

English - Education (ENGED)

ENGED 305 Structure of English

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** ENGWR 300 with a grade of “C” or better
- **Transferable:** CSU
- **General Education:** AA/AS Area II(a)
- **Catalog Date:** June 1, 2020

Designed for prospective teachers or those entering professions requiring strong written language skills, this course affords students the opportunity to study the history of English, traditional and transformational grammars, linguistics, standard usage, phonology, and orthography. Students will examine the development and structure of the English language, language acquisition, and the cultural and linguistic diversity represented by the students in the California public school system. They will also apply grammatical concepts as they meet the 2,000 word writing requirement.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- UTILIZE ACADEMIC LITERACY SKILLS AND KNOWLEDGE NECESSARY TO FUNCTION SUCCESSFULLY AND COMPLETELY AT THE UNIVERSITY, IN THE WORKPLACE AND IN DIVERSE CULTURAL SETTINGS. (PSLO#1, SLO#1)
- examine the history and structure of English.
- compare and contrast the methods of language acquisition, including acquisition of English among culturally diverse populations.
- apply knowledge of standard usage and differentiate between standard and non-standard usage in writing and writing instruction.
- BECOME A SELF-RELIANT, EVALUATIVE READER AND WRITER, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (PSLO#3, SLO#2)
- analyze and apply principles of phonology and orthography.
- employ critical thinking skills in making appropriate rhetorical choices based on grammatical considerations.
- ASSIST STUDENTS IN OBTAINING THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES. (PSLO#5, SLO#3)
- apply the principles of traditional and transformative English grammars as those principles relate to writing.
- apply techniques such as sentence combining to explain relationships between grammar and writing.

ENGED 320 Service Learning: Tutoring Elementary Students in Reading

- **Units:** 3
- **Hours:** 36 hours LEC; 54 hours LAB
- **Prerequisite:** ENGRD 110 with a grade of “C” or better, or placement through the assessment process.
- **Transferable:** CSU
- **General Education:** AA/AS Area III(b); CSU Area E1
- **Catalog Date:** June 1, 2020
This class offers students an opportunity to learn and practice basic methods of tutoring elementary children in reading. Students will meet on campus for the first part of the semester to be trained, and then will be assigned to a nearby elementary school where they will have in-depth practice at tutoring elementary children. This course, which provides an early field experience for students interested in elementary education, may be taken once for credit. Prior to beginning work in the schools, students may be required to be fingerprinted and pass a TB test.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **SLO#1**: Define, clarify and analyze components of a developmentally-appropriate elementary school reading/language arts program.
  
  **Objective A**: Compare and hypothesize how classroom instruction and classroom tutoring differ and complement one another to allow opportunities for all learners to read, write, spell, speak and listen.

  **Objective B**: Discover how the various components of the elementary school reading/language arts programs are organized into a developmentally-appropriate curriculum by identifying how reading/language arts instruction is presented in the classroom.

  **Objective C**: Interpret and analyze how the Reading/Language Arts Framework for California Public Schools K - 12 provides a theoretical and developmentally-appropriate base for curriculum development and instruction.

  **Objective D**: Infer how the reading process relates to the reader as the integration of visual, auditory, psycho-social and cognitive functioning.

- **SLO#2**: Demonstrate knowledge of and successful tutoring of developmentally-appropriate/student-focused reading/language arts lessons.
  
  **Objective A**: Infer and critique how explicit and systematic instruction/assessment of phonics (including knowledge of the alphabetic principle, phonemic awareness and word-analysis techniques) allow learners to improve reading skills.

  **Objective B**: Develop and practice in the elementary classroom various word-analysis lessons as which are appropriate to meet students' learning needs.

  **Objective C**: Infer and critique how reading comprehension, spelling, listening and writing as a process are taught and assessed explicitly and implicitly in the classroom.

  **Objective D**: Develop and practice vocabulary development lessons, reading comprehension lessons, spelling activities and/or writing process lessons as appropriate to meet students' learning needs in the elementary classroom.

  **Objective E**: Assess the reading fluency of elementary students through the use of running records and/or reading fluency tests.

  **Objective F**: Analyze and evaluate how a "print rich" elementary school classroom motivates children to read and to write.

- **SLO#3**: Evaluate critical thinking skills, problem-solving skills and decision-making skills through successful tutoring and reflection on tutoring.
  
  **Objective A**: Practice specific tutoring strategies and lessons (including, as appropriate, behavior modification techniques and memory enhancement techniques) to address identified areas of learner weakness and needs in the reading/language arts curriculum.

  **Objective B**: Assess and evaluate one's growth as a tutor through analytical reflection of classroom tutoring.

  **Objective C**: Incorporate professional language and professional judgment in development of all written work and/or oral presentations which reflect upon the classroom or instruction; the classroom teacher has the right to know what a tutor may perceive of the classroom or of teaching in the classroom.

- **SLO#4**: Demonstrate college-level writing skills through all required written course assessment tools and through all written communication with teachers.
  
  **Objective A**: Prepare and submit a letter of introduction to the classroom teacher.

  **Objective B**: Prepare all course written assignments employing professional language and professional judgment when discussing, describing or analyzing classroom teaching, children and tutoring.

---

**ENGED 495 Independent Studies in English - Education**

**Units:** 1 - 3  
**Hours:** 54 - 162 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the "academic tool kit" including time management, study skills, etc., to accomplish the independent study within one semester term.

English - Laboratory (ENGLB)

ENGLB 70 Writing Center I

- **Units:** 0.5 - 1
- **Hours:** 27 - 54 hours LAB
- **Prerequisite:** None.
- **Catalog Date:** June 1, 2020

This laboratory course provides assistance in writing skills to students in all subject areas. Students may enter the course at any time during the first 9 weeks of the semester and earn either .5 or 1 unit. This course is graded on a credit/no credit basis. ENGLB 70 is recommended for students who are encountering difficulties in writing, spelling, sentence structure, paragraph or essay structure, and who would benefit from individual tutor/instructor assistance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate knowledge of the writing process by engaging with the steps of writing in development of written assignments. (SLO 1)
- Write with a focus in development of a controlling idea (thesis statement) and with the assistance of word process. (Objective 1A)
- Facilitate the use of word processing to assist in the steps of the writing process. (SLO 2)
- Use word processing in the completion of writing tasks. (Objective 2A)

ENGLB 72 Writing Center II
Writing Center II is an independent study course designed to provide one-on-one assistant for students who experience significant difficulty in writing. The course is particularly recommended for students who test into ENGWR 42/ENGRD 19, but may be taken by any student in any discipline needing significant assistance in writing. Students may earn .5 to 1 unit of credit and the course may be added until the end of the 9th week of the regular semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Write clear sentences for the purpose of academic writing. (SLO 1)
- Demonstrate ability to write for an academic purpose. (Objective 1A)
- Identify basic elements of text structure including: paragraph, topic sentences, supporting details, and examples. (Objective 1B)

ENGLB 73 Writing Center III

Writing Center III is designed for students seeking to improve their writing skills with the express purpose of learning to write for success in college level courses. The course is particularly recommended for students who test into ENGWR 58/ENGRD 59 but may be taken by any student in any discipline seeking to improve in writing for an academic purpose. Students may earn .5 to 1 unit of credit and the course may be added until the end of the 9th week of the regular semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Write for the purpose of expressing comprehension and for evaluating text. (SLO 1)
- Evaluate one's own writing in terms of the ability to develop paragraphs with controlling ideas, main ideas, clear organization of thought, and proper grammar. (Objective 1A)
- Work independently with regards to completing discipline related writing coursework and homework. (Objective 1B)

ENGLB 74 Writing Center IV

Writing Center IV is an independent study course which provides assistance in developing writing skills for students who may be enrolled in college level courses where writing demands are significant, but the student is not yet fully confident or consistent in his/her ability to write as demanded by specific discipline courses. This course is particularly recommended for students who are enrolled in or who test into ENGWR 101 or ENGWR 300. The course is open to any student in any course seeking to improve in writing for an academic purpose. Students may earn .5 to 1 unit of credit and the course may be added until the end of the 9th week of the regular semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate an improved ability to practice reading, thinking and writing as interrelated processes. (SLO 1)
- Identify and practice components of college level writing. (Objective 1A)
- Identify and practice components of writing an academic research papers. (Objective 1B)
ENGLB 75 Reading Center I

Units: 0.5 - 1
Hours: 27 - 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Reading is a fundamental skill required by all college students. Reading Center I is designed to meet that need by providing independent study in foundational reading skills following diagnostic assessment of the student's reading abilities. The course is open to all students in all disciplines where reading demands are significant. Students may elect to take the course for .5 to 1.0 unit and the course may be added through the 9th week of the semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate general and specific improvement of reading ability based upon diagnostic assessment of need. (SLO 1)
- Identify individual reading strengths and needs based upon diagnostic assessment of reading ability and in consultation with instructor. (Objective 1A)
- Use specifically focused reading strategies to identify a focus for reading. (Objective 1B)

ENGLB 76 Reading Center II

Units: 0.5 - 1
Hours: 27 - 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Reading Center II is an independent study course open to any student experiencing significant difficulty in reading as required for college. The course may especially be recommended for students enrolled in ENGRD 19/ENGWR 42 or ESLR 40, but may be taken by any student in any discipline where reading demands are significant and where the student may not be prepared. Students may elect to take the course for .5 to 1.0 unit and the course may be added through the 9th week of the semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Read for the purpose of analyzing text to enhance comprehension. (SLO 1)
- Identify and utilize vocabulary techniques for learning new words. (Objective 1A)
- Use context to identify meaning. (Objective 1B)
- Identify main ideas in text and determine how main idea relates to basic structure of paragraphs and texts of extended length. (Objective 1C)

ENGLB 77 Reading Center III

Units: 0.5 - 1
Hours: 27 - 54 hours LAB
Prerequisite: None.
Advisory: ENGRD 59 or ENGWR 58, or placement through the assessment process.
Catalog Date: June 1, 2020

Reading Center independent practice at reading skills necessary for college success. Students meet with an instructor for determination of reading needs, and an agreed upon prescription is then developed. Student may elect to take the course for .5 unit or 1.0 unit. This lab class may be recommended by instructors of ENGRD 59/ENGWR 58 but is open to any student in any discipline wishing to improve her/his reading skills. The course be added until the end of the 9th week of the semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Read for the purpose of analyzing text to enhance comprehension. (SLO 1)
- Identify and utilize vocabulary techniques for learning new words. (Objective 1A)
- Use context to identify meaning. (Objective 1B)
- Identify main ideas in text and determine how main idea relates to basic structure of paragraphs and texts of extended length. (Objective 1C)
Demonstrate general reading abilities, which will lead to success in college level reading tasks. (SLO 1)

improve vocabulary range and usage, comprehension, study reading, reading rate, and critical reading through the use of analytical and critical reading strategies. (Objective 1A)

Improve vocabulary skills by following a diagnostic prescriptive methodology. (Objective 1B)

ENGLB 78 Reading Center IV

Units: 0.5 - 1
Hours: 27 - 54 hours LAB
Prerequisite: None
Advisory: ENGRD 110, 310, or 312, or placement through the assessment process.
Catalog Date: June 1, 2020

Critical reading is a skill needed for success in college and particularly in 300 level courses. Many students enter those courses who are not confident in their reading abilities or their abilities to read critically. Reading Center 4 provides practice in this area. This course is open to any student in any discipline where reading and research may be required. It may be recommended for students enrolled in ENGRD 310, ENGRD 312, or ENGRD 110. Students may enroll through the 9th week of the semester and may elect to take the course for .5 unit or 1.0 unit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate the ability to analyze and interpret a variety of college level texts across a variety of college disciplines. (SLO 1)
- Identify how research has been analyzed in a variety of academic research papers. (Objective 1A)
- Practice interpretation of research findings and conclusions. (Objective 1B)
- Practice writing research conclusions based upon one's analysis of data (or literature review) from a variety of academic research papers from a variety of disciplines. (Objective 1C)

English - Literature (ENGLT)

ENGLT 303 Introduction to the Short Story

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

Students will read, analyze, and discuss short stories by a wide variety of writers. Reading will emphasize American and British writers but will include authors from other countries as well. Thematic emphasis will focus on the connections between literature and the human condition.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- APPLY CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY AS SELF-RELIANT, EVALUATIVE READERS AND WRITERS(SLO #1, PSLO #3):
- Demonstrate an understanding of the characteristic features of the short fiction genre.
- Read and analyze critically works of short fiction written in the last 200 years.
- Discover connections between literary themes and life situations.
- Demonstrate critical thinking about those discoveries both verbally and in writing.
ENGLT 310 English Literature I

Study of significant works of major English authors from Beowulf through Samuel Johnson, with consideration of the most important aspects of English literary history.

Upon completion of this course, the student will be able to:

- PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS (SLO #1; PSLO #3)
- DEMONSTRATE AN UNDERSTANDING OF THE MAJOR ERAS OF DEVELOPMENT OF LITERATURE IN ENGLAND FROM ANGLO-SAXON TIMES THROUGH THE NEOCLASSICAL PERIOD OF THE 18TH CENTURY (SLO #2)
- read and understand the different genres and writers in English literature
- demonstrate an understanding of English culture and history as expressed in the literature
- DEMONSTRATE ANALYTICAL SKILLS IN CLASS DISCUSSION AND WRITING ASSIGNMENTS (SLO #3)
- write interpretive essays showing insight into the themes expressed in the literature of the period

ENGLT 311 English Literature II

Survey of significant works of major English authors from the beginning of Romanticism in the Eighteenth Century to the work of major authors in the Twentieth Century, with consideration of the important aspects of English literary history.

Upon completion of this course, the student will be able to:

- BECOME A SELF-RELIANT, EVALUATIVE READER AND WRITER, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (PSLO #3; SLO #1)
- demonstrate an understanding of the major eras of development of literature from the beginning of Romanticism in the 18th Century through the present.
- read and understand the major types of writers in British literature.
- demonstrate an understanding of English culture and history as expressed in literature.
- write interpretive essays showing insight into the themes expressed in this literature.
- demonstrate analytical skills in class discussions and writing assignments.

ENGLT 320 American Literature I
This course is a survey of the more representative works in American literature from early America through the Civil War.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS.** *(SLO 1, P-SLO 3)*

- respond in writing and discussion to major literary works of the United States.

- demonstrate an awareness—through literature—of the development of cultural patterns in America.

- demonstrate the ability to interpret a piece of literature and to discuss intelligently the problems and ideas presented in literature.

- recognize and analyze the elements of poetry, non-fiction and fiction.

- demonstrate the ability to recognize the power of literature as a humanizing force.

- demonstrate understanding of appropriate academic discourse and the conventions of critical literary analysis

- relate the literary works to their historical, philosophical, social, political, regional, and/or aesthetic contexts

---

**ENGLT 321 American Literature II**

Students will survey the representative works in American Literature after the Civil War.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITER, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS.** *(SLO 1, P-SLO 3)*

- respond in writing and discussion to major literary works of the United States, from after the Civil War through the present.

- demonstrate an awareness—through literature—of the development of cultural patterns in America.

- demonstrate the ability to interpret a piece of literature and to discuss intelligently the problems and ideas presented in literature.

- recognize and analyze the elements of poetry, prose, and drama.

- demonstrate the ability to recognize the power of literature as a humanizing force.

---

**ENGLT 330 African American Literature**

Students will survey the representative works in African American Literature.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS.** *(SLO 1, P-SLO 3)*

- respond in writing and discussion to major literary works of the United States, from after the Civil War through the present.

- demonstrate an awareness—through literature—of the development of cultural patterns in America.

- demonstrate the ability to interpret a piece of literature and to discuss intelligently the problems and ideas presented in literature.

- recognize and analyze the elements of poetry, prose, and drama.

- demonstrate the ability to recognize the power of literature as a humanizing force.
A survey of the most representative African American writers from the slave narrative to the present. The comprehensive literary study includes analysis of significant historical and cultural influences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY AND IN ACADEMIC AND WORKPLACE SETTINGS (SLO #1; PSLO #3)
- evaluate the literature critically and assess its historical significance.
- demonstrate an appreciation for the contributions of African American Writers to mainstream literature.
- demonstrate critical thinking skills in class discussion and in written analytical essays.
- demonstrate the effects of African American Literature on the reader through the use of textual analysis and reader response.
- demonstrate the ability to incorporate bibliographic research effectively into analytical papers.

ENGLT 335 Latino, Mexican-American, and Chicano Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligibility for ENGWR 300.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course explores literature (poetry, short stories, novels, creative nonfiction, and performance) authored by Latinx writers. It typically examines the following themes: resistance, survival, identity, homeland, immigration, the border, socio-political activism, gender, and sexuality. All or most of each text is in English. Knowledge of the Spanish language is helpful but not required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- CONTRIBUTE TO A COMMUNITY OF EVALUATIVE READERS AND WRITERS, AND USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, PSLO #3)
- demonstrate awareness of the effects of literature on the reader through textual analysis, classroom discussion, and response papers.
- analyze the themes of gender and ethnicity and the concomitant issues of protest, identity and stereotyping as they emerge from various writers.
- demonstrate an understanding of the difficulties facing a range of Latinx people in a culture dominated by traditional European values.
- analyze how the Latinx authors express their responses to racism, sexism, ethnocentrism, and/or classism.
- analyze how authors celebrate their connection and relationship to Latinx culture write interpretive essays based on the literature.
- demonstrate the ability to perform bibliographic research and incorporate findings into analytic papers that evaluate literary, historical, and sociological aspects of diverse cultures.

ENGLT 336 Race and Ethnicity in Contemporary American Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020
This class will examine literature written in the United States during the last 50 years in which the issues of race and racism, ethnicity and ethnocentrism, and culture and assimilation predominate the thematic concerns. All genres will be examined, as well as writers from many of the ethnic groups in America, including African Americans, Mexican Americans, Native Americans, and Asian Americans.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY AND IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, PSLO #3)
- demonstrate awareness of the effects of literature on the reader through textual analysis, classroom discussion, and response papers.
- analyze the themes of gender and ethnicity and the concomitant issues of protest, identity and stereotyping as they emerge from various writers.
- demonstrate an understanding of the difficulties facing women and minorities in culture dominated by traditional European values.
- analyze how the author’s voice expresses his or her response to racism, sexism, ethnocentrism, and/or classism.
- write interpretive essays based on the literature.
- demonstrate the ability to perform bibliographic research and incorporate findings into analytic papers that evaluate literary, historical, and sociological aspects of the diverse cultures present in the United States.

ENGLT 340 World Literature I

Units: 3  
Hours: 54 hours LEC  
Prerequisite: ENGWR 300 with a grade of "C" or better, or placement through the assessment process.  
Transferable: CSU; UC  
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C2; IGETC Area 3B  
C-ID: C-ID ENGL 140  
Catalog Date: June 1, 2020

The course will acquaint students with a diverse range of literature from the Ancient World through the Renaissance. Students will identify the commonalities and differences in the myths, epic poetry, philosophy, sacred texts, lyric poetry, prose, and drama of early Middle Eastern, Asian, African, South American, European, and North American literatures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Prepare students to become self-reliant, evaluative readers and writers able to use critical thinking to communicate understanding and appreciation of literature. (SLO #1; PSLO #1, #2, #3)
- Analyze and evaluate similarities and differences in theme, myth, and archetype apparent in literatures of different cultures.
- Evaluate historical, philosophical, and cultural contexts of the various literatures.
- Analyze and apply various interpretative tools or critical approaches to a diverse selection of world literatures.
- SLO #2: Appraise significant aspects of culture and its contributions, and appreciate the social experiences of early Middle Eastern, Asian, African, South American, European, and North American cultures. (PSLO #4,#5)
- Evaluate the effects of ethnocentricity, ethnicity, ageism, racism, classism, and sexism and synthesize this information in short essays, a research paper, and written exam.
- Analyze cultural tolerance and awareness in journals, short essays, a research paper, and written exams.

ENGLT 341 World Literature II
This course is a survey of significant masterpieces from mid-seventeenth to late-twentieth century literature.

Upon completion of this course, the student will be able to:

- **DEMONSTRATE THAT HE/SHE IS A SELF-RELIANT, EVALUATIVE READER AND WRITER, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND/OR WORKPLACE SETTINGS (SLO #1; PSLO #3)**

- identify themes, myths, and archetypes as they emerge in world literature.

- recognize characteristics of various literary movements and genre as they emerge and develop in the chronology of the written tradition.

- demonstrate an understanding of the relationships between literature and significant historical events.

- evaluate literature critically and assess its historical significance.

- respond in writing and discussion to major literary works of the world.

---

**ENGLT 343 Contemporary Third World Literature**

This course is an introduction to literature of writers from Africa, Central and South America, Asia and the Middle East. Approached through the reading and discussion of all genre, basic elements of literature interpretation will be stressed to enhance understanding of the world view and culture of writers often not covered in other literature classes. A special effort will be made to sample recent Nobel Prize winners from each area of the world.

Upon completion of this course, the student will be able to:

- **SLO #1: PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, PSLO #3)**

- demonstrate critical skills in class discussion and writing analytical essays.

- demonstrate awareness of the effects of literature on the reader through textual analysis, classroom discussion, and response papers.

- analyze the themes that often emerge from oppressed peoples.

- analyze how the author’s voice shows his or her coping with intercultural struggles.

- **SLO #2: FACILITATE STUDENTS TO RECOGNIZE ETHICAL IMPLICATIONS OF VARIOUS MODES OF COMMUNICATION AND THE NEED TO USE THIS KNOWLEDGE RESPONSIBLY. (SLO #2, PSLO #2)**

- demonstrate an understanding and appreciation of the cultural diversity found in writing from different parts of the world.

- **SLO #3: ENABLE STUDENTS TO DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS. (SLO #3, PSLO #4)**

- write personal response essays using various forms

- demonstrate the ability to perform bibliographic research and incorporate findings into original analytical papers that evaluate literary, historical, and sociological aspects of diverse culture literature.
ENGLT 345 Mythologies of the World

This course explores and examines several universal themes of human experience as found through a broad survey of actual myths gathered from around the world. Special emphasis is also placed on the relationships and the similarities of various mythologies. The course includes fairly intensive instruction of primary interpretative theories of mythological research and analysis. This course emphasizes some of the myths underlying the western world view and recognizes diversity and commonality in myths from Middle Eastern, Native North American, African, Asian, and South American cultures. Students analyze, contrast, and compare myths on topics including the goddess culture, creation, the hero’s journey, Judeo-Christian themes, the dying god, and psychological applications. From this process, they will gain an understanding of ethnocentrism, ethnicity and racism and the impact of these on the American experience. The format of instruction will involve lecture, group discussion, and other activities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY AND IN ACADEMIC AND WORKPLACE SETTINGS (SLO#1; PSLO #3).
- articulate an understanding of such themes in mythology as human relationship to God, deities, sacrifice, birth, creation, destruction, healing, and the hero’s journey, and the many cultures in which these themes occur.
- develop an appreciation of the common thematic framework that underlies the mythologies of various cultures and demonstrate in short written responses, formal essays, and written exams the ability to analyze, using various interpretative tools, the metaphorical messages inherent in myth.
- engage in critical analysis of myths through reading, writing, and discussion of mythologies from around the world.
- SLO #2: FACILITATE STUDENTS TO RECOGNIZE ETHICAL IMPLICATIONS OF VAROUS MODES OF COMMUNICATION AND THE NEED TO USE THIS KNOWLEDGE RESPONSIBLY (SLO #2; PLSO #2)
- demonstrate an ability to compare, contrast, and analyze significant aspects of the cultural contributions and social experiences as manifest within the myths of Western, Eastern, Middle Eastern, Native North American, African, Asian and South American mythic traditions.
- SLO #3: ENABLE STUDENTS TO DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS (SLO #3; PLSO #4)
- develop a basic understanding of symbolism in myth, literature, and culture.
- apply an understanding of universal mythic themes and images to the reading of modern literature.

ENGLT 360 Women in Literature

This course is designed for women and men who are interested in examining the roles women have occupied in literature, both as writers and as protagonists. Emphasis will be placed on literature that develops protagonists and explores literary themes that focus on women’s experiences in childhood, adolescence, marriage, childbirth and child rearing, death, love, dependence, independence, and their own creativity. Female authors and protagonists from Western, Eastern, and Third World countries will be included. Male authors may also be included. Over the course of the semester, students will examine issues of ethnicity, ethnocentrism, racism, ageism, classism, gender inequity, and religious differences that are raised in the literature under discussion. In order to develop a sense of cultural tolerance to such issues, the literature will include a variety of genres, such as short stories, novels, plays, and poetry, the emphasis to be determined by the instructor.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY AND IN ACADEMIC AND WORKPLACE SETTINGS (SLO#1; PSLO #3).
- articulate an understanding of such themes in mythology as human relationship to God, deities, sacrifice, birth, creation, destruction, healing, and the hero’s journey, and the many cultures in which these themes occur.
- develop an appreciation of the common thematic framework that underlies the mythologies of various cultures and demonstrate in short written responses, formal essays, and written exams the ability to analyze, using various interpretative tools, the metaphorical messages inherent in myth.
- engage in critical analysis of myths through reading, writing, and discussion of mythologies from around the world.
- SLO #2: FACILITATE STUDENTS TO RECOGNIZE ETHICAL IMPLICATIONS OF VAROUS MODES OF COMMUNICATION AND THE NEED TO USE THIS KNOWLEDGE RESPONSIBLY (SLO #2; PLSO #2)
- demonstrate an ability to compare, contrast, and analyze significant aspects of the cultural contributions and social experiences as manifest within the myths of Western, Eastern, Middle Eastern, Native North American, African, Asian and South American mythic traditions.
- SLO #3: ENABLE STUDENTS TO DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS (SLO #3; PLSO #4)
- develop a basic understanding of symbolism in myth, literature, and culture.
- apply an understanding of universal mythic themes and images to the reading of modern literature.
ENGLT 365 Introduction to Gay, Lesbian, Bisexual and Transgender Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligibility for ENGWR 300
Transferable: CSU
Catalog Date: June 1, 2020

This course surveys representative literature concerning lesbian, gay, bisexual, transgender, and queer or questioning (LGBTQ+) themes and issues as written by or about LGBTQ+ people from throughout its literary history to the present day. This comprehensive literary study includes attention to diverse LGBTQ+ concerns as they intersect with issues concerning race, gender, ability, and class. Moreover, students will be expected to analyze the significant historical and cultural influences of the LGBTQ+ community through literature.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Contribute to a community of evaluative readers and writers and use critical thinking skills to read and write effectively in academic and workplace settings. (SLO #1)
- Compose essays and other writings that respond to, evaluate, and analyze LGBTQ+ literary works. (SLO #2)
- Assess literature by or about LGBTQ+ people as a reflection of the authors' cultures and values. (Objective 2a)
- Demonstrate a basic knowledge of LGBTQ+ literature and the cultural, intersectional, and intellectual contribution it represents. (SLO #3)
- Recognize the contributions of diverse LGBTQ+ writers to mainstream literature and the LGBTQ+ subculture. (Objective 3a)
- Assess the intersectional concerns of LGBTQ+ Literature (race, class, gender, ability etc.). (Objective 3b)
- Identify and explain LGBTQ+ issues at work in literature over the course of several historical periods in the U.S. and globally. (SLO #4)
- Discuss the significance of LGBTQ+ writers and topics within a historical framework. (Objective 4a)
This course is designed primarily for parents, prospective teachers, preschool workers and those in frequent contact with children and/or interested in literature written for children. Topics include wide reading of historical and contemporary children's literature, criteria for selection, and practice in presenting and responding to literature, including storytelling and oral reading.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop and apply criteria for evaluating children's literature (SLO#1).
- develop principles of selection of literature for children.
- understand and interpret the contributions of outstanding authors, illustrators and critics of children's literature.
- recognize the characteristics and value of the various genres of children's literature.
- understand literary terminology, including the elements of fiction and poetic devices and develop skill at expressing ideas in class literary discussions.
- develop critical thinking skills: defining issues; gathering, analyzing and evaluating ideas; synthesizing and developing conclusions.
- develop ideas and practical activities for helping children to experience, appreciate, and respond to literature (SLO#2).
- interpret and apply the theories and practice of oral reading and storytelling.

ENGLT 402 Introduction to Shakespeare and Film

In this course, students will draw connections between traditional and contemporary literary genres as they read William Shakespeare's plays and critically analyze film versions of these plays. Students will read and analyze a selection of Shakespeare's histories, comedies, tragedies, and romances in the context of Elizabethan drama. Then they will view a variety of cinematic interpretations of these plays and compare and contrast such elements as plot, character, theme, staging, and critical and directorial interpretation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY AND IN ACADEMIC AND WORKPLACE SETTINGS (SLO #1; PSLO #3)
- Identify the components of comedy, tragedy, history, and romance.
- Analyze the cultural and societal implications of the plays.
- Develop, articulate, and support interpretations of the plays.
- Correlate the study of Shakespearean drama to the study of Shakespeare's plays on film.
- Contrast plot, character, theme, setting and staging in the plays and films.
- Analyze critical and directorial interpretations of Shakespeare's plays on film.
- Recognize the study of written and visual Shakespearean texts as a humanizing force.
This course analyzes the process, challenges, failures, and successes of adapting literary and stage material into film. It compares faithful and unfaithful adaptations through reading the original texts and viewing the adapted films with an awareness of their historical and cultural contexts. The course examines intention, creative distinctions, as well as limits and strengths of each medium. This course requires at least one research essay proposing and justifying details for an adaptation and including appropriate MLA documentation. This course is the same as HONOR 378. This course, under either name, may be taken one time for credit.

Upon completion of this course, the student will be able to:

- CRITICALLY ANALYZE, COMPARE, AND EVALUATE VARIOUS WORKS OF LITERATURE AND FILM (SLO#1; PSLO #4 and #1; Honors Prog. SLO #2 and #5). Outcome may be evaluated by all or some of the following criteria:
  - Annotate and analyze written texts and respond thoughtfully to them.
  - Analyze and summarize films and respond thoughtfully to them.
  - Determine themes, plot structure, characters, and symbols used in written works and films.
  - Question a director's intention and effectiveness of the director's choices.
  - Compare and contrast elements of adaptations (such as theme for example) to the corresponding elements in the original texts.
  - Construct criteria for judging strengths and weaknesses of adaptations.
  - Appraise the successes and failures of adaptations.
  - Assess the effects of historical and/or social context for each work studied.
  - Critique his or her own and other student writing.

- APPLY COMPLEX CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY AS SELF-RELIANT, EVALUATIVE READERS AND WRITERS (SLO#2; PSLO #2 and #3; Honors Prog. SLO #2 and #5). Outcome may be evaluated by all or some of the following criteria:
  - Demonstrate awareness of the effects of literature on the reader through textual analysis, classroom discussion, and response papers.
  - Apply terminology from literary studies.
  - Analyze and interpret elements of literature.
  - Appraise the strengths and weaknesses inherent in the genres of fiction, non-fiction, and drama.
  - Evaluate literary texts in cultural context, as cultural and artistic expressions in their historical and social background.
  - Compose interpretive essays based on the literature.
  - Propose his or her own plan of adapting a literary work into film and justify the choices made in this proposal.

- ANALYZE, CRITIQUE, AND EXPRESS IDEAS EFFECTIVELY AS SELF-RELIANT, EVALUATIVE VIEWERS OF FILMS BY APPLYING COMPLEX CRITICAL THINKING SKILLS (SLO#3; PSLO #2 and #4; Honors Prog. SLO #2 and #5). Outcome may be evaluated by all or some of the following criteria:
  - Apply terminology from film studies and critical theories.
  - Analyze and the interpret elements of film.
  - Appraise the strengths and weaknesses inherent in the genres of film.
  - Evaluate films based on concepts such as narrative modes, genre conventions, and production exigencies.
  - Evaluate films in cultural context, as cultural and artistic expressions in their historical and social background.
  - Compose interpretive essays based on the literature.
ASSESS ISSUES AS WELL AS RESEARCH, EVALUATE, AND SYNTHESIZE SOURCES TO SUPPORT A THESIS BY APPLYING COMPLEX CRITICAL THINKING SKILLS (SLO#4; PSLO #2, #3 and #5; Honors Prog. SLO # 3 and #4. Outcome may be evaluated by all or some of the following criteria:

- Evaluate and justify his or her own choices made in a proposed adaptation of a literary work.
- Integrate details from research to support his or her own choices made in the proposed adaptation.
- Appraise and use a variety of research techniques.
- Evaluate sources.
- Research and incorporate sources effectively and meaningfully in writing.
- Summarize, paraphrase, and directly quote outside sources as support for his or her ideas and/or represent a belief held by the opposition.
- Use MLA documentation format correctly.

ENGLT 495 Independent Studies in Literature

| Units: | 1 - 3 |
| Hours: | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of “Special Studies” for full details of Independent Studies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- SLO #2: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- SLO #3: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- SLO #4: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

English - Reading (ENGRD)

ENGRD 19 Foundations of Reading and Writing Improvement
This course integrates and accelerates reading and writing at the basic skills level with a focus on learning to use language to learn. Course content, activities, and assignments integrate reading and writing for an academic purpose. Reading and writing are instructed and contextualized through a focus on a variety of fiction and non-fiction texts, and through the discussion of the meaning of a college education (including a focus on student services, academic programs, and campus events). Successful completion of this course will serve as a prerequisite for ENGRD 59/ENGWR 58 at Cosumnes River College. Placement in the course will be through the college assessment process; self-placement will not be allowed. This course is the same as ENGWR 42, and only one may be taken for credit. See "Cross-Listed Courses" in the catalog.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- Apply Standard English conventions in a variety of texts read and written (i.e., sentences, paragraphs, extended texts of multiple paragraphs). (SLO 1)
- Recognize and compose complete sentences by applying correct usage of grammar and punctuation at a basic level.
- Demonstrate at a basic level, control of punctuation, spelling, capitalization, and grammar within paragraphs and in texts of multiple paragraphs.
- Apply context clues and structural analysis to decode words and to determine word meaning. (SLO 2)
- Apply basic structures of paragraphs in a variety of extended texts. (SLO 3)
- Write paragraphs with stated main ideas and supporting details.
- Infer meaning within a variety of texts read and written. (SLO 4)
- Draw logical conclusions from texts of varying lengths.
- Evaluate personal opinions about texts read by explaining those opinions in writing.

ENGRD 59 Reading Development with Writing

The focus of this course will be on writing and reading instruction as integrally related skills. Students will study and practice reading comprehension in the context of the writing process with the goal of accelerating the pathway to the English Reading and English Writing requirements. Students will develop critical thinking skills and the ability to write clear and correct sentences as they write a variety of focused, developed, organized paragraphs and essays. Students will write both full-process and in-class essays. This course may include a departmental final or portfolio assessment. Successful completion of this course will serve as a prerequisite for ENGWR 101 and ENGRD 110 only at Cosumnes River College. As enrollment into course will be based upon prerequisite, there will be no self-placement. This course is the same as ENGWR 58, and only one may be taken for credit.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- Comprehend, think critically, and respond appropriately in writing to a variety of professionally written non-fiction and fiction texts. (SLO 1)
- Use context to determine the meanings of words and to interpret the meaning behind a variety of non-fiction and fiction texts.
- Differentiate between main ideas and support details in a variety of non-fiction texts.
- Develop written responses with clearly stated main ideas/thesis statements and appropriate support details (including facts and supported opinions developed through careful critical thinking) when responding to a variety of non-fiction and fiction texts.
- Identify implied meanings and formulate appropriate conclusions in reading a variety of fiction and non-fiction texts.
- Identify and analyze basic organizational patterns in a variety of expository texts (e.g., generalization-example, cause-effect, and comparison-contrast).
• Compose fully developed, logically structured paragraphs and essays using the stages of pre-writing, drafting, revising, and editing. (SLO 2)

• Achieve coherence and unity in essay form with planned organization and the use of transitions.

• Achieve various purposes through writing.

• Develop text with thoughtful, focused thesis statements, relevant topic sentences, specific examples and details.

• Develop skill and confidence in writing timed essays.

• Recognize and begin to apply the conventions of standard written English. (SLO 3)

• Identify standard written English conventions in a variety of written texts.

• Write clear and correct sentences using correct capitalization, spelling, and punctuation.

• Recognize and correct major sentence errors in one’s own writing, such as fragments, run-on sentences, subject-verb agreement, pronoun agreement and references.

• Use word processor for composition and revision.

ENGRD 110 Comprehension Strategies and Vocabulary Development For College

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGRD 59 or ENGWR 58 with a grade of “C” or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This reading course is designed to help students prepare for college level reading by refining vocabulary, literal and inferential comprehension skills, textbook reading techniques, and study skills and by reading for pleasure. Efficiency is gained by learning to vary rate and comprehension depending upon purposes for reading. Students are encouraged to enroll in ENGLB 70 for access to individualized help in the Reading and Writing Center.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1 Read actively.
  make predictions before reading and adjust them while reading
  survey the organization of the text
  assess prior knowledge and personal experience
  ask guide questions to connect ideas

• SLO #2 Demonstrate a variety of vocabulary development techniques.
  employ dictionary skills to define unknown words
  understand the meaning of commonly used prefixes, root, and suffixes
  understand parts of speech
  apply the above structural analysis to define unknown words
  examine the surrounding contexts to define unknown words by formal definition, example, contrast ideas, and logical reasoning
  establish and expand specialized vocabulary

• SLO #3 Identify stated and implied main ideas and supporting details in textbooks, periodicals, fictions, and various appropriate reading materials.

• SLO #4 Construct critical reading skills.
  differentiate between facts, opinions, and informed opinions
  draw proper conclusions and make judgments upon examining factual information and implied messages in the text
  interpret author’s point of view and tone
  identify literal and figurative language
SLO #5 Implement textbook comprehension techniques.

- implement SQ3R technique
- construct outlines
- produce summaries
- organize information by making concept maps
- employ effective highlighting skills

SLO #6 Adjust reading rates and techniques.

- determine purpose of reading to choose a proper reading rate
- adapt various reading rates to achieve the purpose of reading
- utilize and adjust effective reading techniques to accommodate reading rates

ENGRD 113 Reading and Writing Skills for College

**Same As:**
- ENGWR 109

**Units:**
- 4.5

**Hours:**
- 72 hours LEC; 27 hours LAB

**Prerequisite:**
- ENGRD 59 or ENGWR 58 with a grade of "C" or better, or placement through the assessment process.

**Catalog Date:**
- June 1, 2020

This integrated reading and writing course is designed to accelerate the preparation for college reading and writing competency requirement for students who are assessed into one level below transfer English courses. This course prepares students for ENGRD 310/312 and ENGWR 300 with integrated teaching and learning in both reading and writing to accelerate a pathway for English Reading and Writing requirements. Students will learn to develop reading skills in vocabulary expansion, unlocking meanings with context clues and word parts, increasing comprehension, SQ3R, and critical thinking. Students will also learn to develop skills in writing correct, clear, and concise sentences with proper English grammar that transfer to well-developed and organized paragraphs and essays. Other skills include paraphrasing, summarizing, pre-reading and pre-writing techniques, revising and editing essays, analyzing and comparing ideas, identifying author's tone, bias, and purpose. This course is most ideal for students who are assessed into both ENGRD 110 and ENGWR 101. Upon successful completion of this course, students will have met the prerequisite for ENGRD 310/312 and ENGWR 300. This course may include a departmental final. This course is the same as ENGWR 109, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Demonstrate proficiency with reading and writing as a process that includes pre-reading/writing, reading/drafting, and post-reading and writing.
  - Objective 1A: Annotate written texts.
  - Objective 1B: Identify organizational thought patterns in various styles of text.
  - Objective 1C: Make predictions before reading and adjust them while reading.
  - Objective 1D: Assess prior knowledge and personal experience through brainstorming, asking questions, and free write to make association with written texts.
  - Objective 1E: Construct summaries and outlines of written texts.

- SLO #2 Demonstrate proficiency in composing and recognizing coherent sentences, paragraphs and essays in proper English grammar in various reading materials and writing tasks.
  - Objective 2A: Understand parts of speech and apply the understanding in writing.
  - Objective 2B: Establish and expand specialized vocabulary and choose the appropriate words to express ideas.
  - Objective 2C: Use clear and varied sentences in writing with proper punctuation, capitalization and word form.
  - Objective 2D: Develop error-free prose and recognize common errors in spelling in different styles of writing.
  - Objective 2E: Achieve coherence and unity in writing with a focused and logical thesis statement
  - Objective 2F: Organize evidence and examples to support ideas in a logical manner that fits the style of writing and fulfill the purpose of writing

This course offers instruction in academic reading skills to students who are concurrently enrolled in a college course. The instruction includes informal lecture, self-paced individual work, workshop, guided practice, and assisted learning. Pass or No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Understand the composition and structure of written text in various styles in academic discipline.
  - Objective 1A: Recognize the structure of a paragraph and different types of supports.
  - Objective 1B: Identify stated and implied main idea and support details.
  - Objective 1C: Recognize the organization patterns of a written text.
  - Objective 1D: Understand writer's use of language to achieve the purpose.
- SLO #2 Build and expand specialized vocabulary for different disciplines.
  - Objective 2A: Understand roots, prefixes and suffixes and etymology in vocabulary development.
  - Objective 2B: Unlock the meaning of unknown words using contextual clues.
- SLO #3 Apply study skills.
  - Objective 3A: Use annotation, highlighting, summarizing, outlining, and mapping to comprehend, evaluate and analyze written text.
  - Objective 3B: Employ proper time management skills to organize the process of assignment completion and reading process.
ENGRD 200 Reading the American Cultural Experience

This academic English Reading course examines the crucial questions of what it means to read critically and at college level. Students will engage in extensive reading in and out of class as they focus on analyzing and interpreting a variety of texts. The focus of required reading will be on using language to analyze and interpret multicultural issues and conflicts which arise in diverse cultural settings and communities. The purpose of this language study will be to develop academic vocabulary, academic research and writing skills, and the ability to read and think analytically and critically about the written word. Concurrent enrollment in ENGLB 74 (Writing Center IV) or ENGLB 78 (Reading Center IV) will allow for concentrated independent study on the content and requirements of the course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Read analytically and critically in a variety of texts interrogating the multicultural American experience. (SLO 1)
- Apply skills of making inferences, distinguishing fact and opinion by appraising an author’s purpose, tone, bias, and point of view in a variety of fiction and non-fiction texts. (Objective A)
- Evaluate the quality and sufficiency of evidence and other forms of support for a written argument which critiques the multicultural American experience. (SLO 2)
- Assess elements of argumentation in extended text focusing on propaganda, assumptions, faulty analogies, non-sequiturs, deductive and inductive patterns, and topics relative to the issue of the multicultural American experience. (Objective A)
- Select suitable critical reading/metacognitive reading strategies to construct meaning and self-regulate comprehension and learning. (SLO 3)
- Assess proper strategies to regulate reading rate for reader-specified and text/context-specified purpose. (Objective A)
- Respond appropriately in writing to a variety of fiction and non-fiction texts. (SLO 4)
- Develop analytical response essays to stories, essays, and arguments regarding the multicultural American experience. (Objective A)
- Write an argumentative research paper on a significant aspect of the multicultural American experience. (Objective B)
- Apply appropriate mechanics when writing. (Objective C)

ENGRD 310 Critical Reading as Critical Thinking

This course covers the theory and practice of essential reading skills for proficient academic performance with an emphasis on (1) reading strategy applications in textbook, fiction, and nonfiction, (2) critical analysis and evaluation of college level academic texts in multicultural writings, fiction and non-fiction reading, (3) critical and analytical evaluation of college level expository, narrative, descriptive, and argumentative essays and research, (4) development and expansion of critical thinking skills required in today's diverse work environment, (5) vocabulary development, and (6) development of flexibility in reading rate. This course meets the Reading Competency requirement for the AA and AS degrees, and is CSU transferable. Additional work in the Reading and Writing Center (ENGLB 70 or 75) may be advised.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: Deepen knowledge of general academic and discipline-specific vocabulary and concepts.
- Apply knowledge of structural analysis and contextual analysis to unknown words
ENGRD 311 Intensive Critical Thinking for College Success

Units: 4
Hours: 72 hours LEC
Prerequisite: ENGRD 59 or ENGWR 58 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU
General Education: AA/AS Area II(b); CSU Area A3
Catalog Date: June 1, 2020

This course emphasizes the theory and application of critical thinking through reading expository, argumentative, fictional and nonfictional literature and works to develop the following: critical and analytical reading skills for college-level text, critical and analytical evaluation in research, synthesizing information to form logical conclusions, comparing and evaluating multiple sources, application in critical reading strategies across the discipline, vocabulary development and expansion for college-level reading. This accelerated course is for students who are ready for the challenge of an intensive learning experience at college level. This course meets the Reading Competency requirement for AA and AS degrees and is CSU transferable.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Read actively.
- Employ proper reading strategies during pre-reading, reading and post-reading stages such as surveying, defining purpose of reading, predicting, asking guide questions, annotating, highlighting, constructing outlines, and writing summaries.
- SLO #2 Demonstrate and deepen vocabulary development techniques.
- Understand common word parts and spelling rules.
- Apply knowledge of contextual analysis and structural analysis in decoding unknown words.
- Establish adequate vocabulary capacity in specialized terminology for college-level text.
- SLO #3 Construct critical reading and thinking skills to evaluate the logic of arguments in college-level texts.
- Differentiate between facts, opinions, informed opinions, and use of deceptive language in arguments and persuasion.
- Identify author's tone, purpose, issue, claim and conclusion in a nonfiction work.
- Evaluate author's evidence, bias, clarification and credibility to draw logical and reasonable conclusion.
- SLO #4 Develop and apply analytical and critical reasoning skills in a variety of college level texts.
- Research and assess various forms of propaganda, assumptions, faulty analogies, non-sequiturs, deductive and inductive patterns, and argument.
- Synthesize information to draw logical and reasonable conclusion about written text.
ENGRD 312 Academic Textbook Reading

Units: 3  
Hours: 54 hours LEC  
Prerequisites: ENGRD 110 with a grade of "C" or better, or placement through the assessment process.  
Advisory: ENGLB 70, ENGLB 75, ENGWR 101, or ESLW 320  
Transferable: CSU  
Catalog Date: June 1, 2020

This course refines students’ skills and ability to read, understand, and respond to college-level textbooks across the curriculum. Emphasis is placed on discipline-based vocabulary, critical reading and thinking strategies, interpretation of visual aids and data, and employing appropriate reading rate to fulfill the purpose of reading. This course meets the Reading Competency requirement for the A.A. and A.S. degrees, and is CSU transferable. Students are encouraged to also enroll in ENGLB 70 or 75 for access to individualized help in the Reading and Writing Center.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Apply the principles of textbook reading
- Interpret graphs, figures, data presentations, and recognize textbooks' learning aids.
- Examine schema; develop and expand vocabulary using context clues, word parts; and establish specialized and technical terms.
- SLO #2 Evaluate textbook materials
- Adapt critical reading strategies to construct new material in various reading environments across the discipline as a critical and analytical thinker.
- Evaluate and analyze reading material to make connections between the new and existing information.
- SLO #3 Use writing as a learning tool
- Demonstrate knowledge and comprehension of reading material through academic writing.
- Express personal opinions and validate facts about various types of reading material in academic writing.
- SLO #4 Employ reading rates
- Correlate, define, and apply appropriate reading rates for academic reading across the disciplines.
- Modify reading rate flexibility to meet the purpose of reading.
- SLO #5 Synthesize new information
- Synthesize and create new information obtained from reading material in writing, discussion, or presentation.
- Draw relevant conclusions about new information in various reading environments.
- SLO #6 Adapt critical reading strategies
- Analyze the author's tone, attitude, purpose, and thesis.
- Formulate questions and make judgments about reading material.
- Associate background knowledge and personal experience with new information.
- Recognize fallacies in logic and reasoning.
- SLO #7 Analyze and relate all above objectives to courses taught throughout the disciplines
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1**: Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).

- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.

- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.

- Use information resources to gather discipline-specific information.

- **SLO #2**: Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).

- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.

- Explain the importance of the major discipline of study in the broader picture of society.

- **SLO #3**: Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).

- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.

- **SLO #4**: Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).

- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.

This course offers training in grammar, sentence building, correct usage, and punctuation. This course is recommended for students who wish to review basic principles of standard English as preparation or reinforcement of developmental writing for ENGWR 58 or ENGWR 101 or college composition for ENGWR 300. Graded on a pass/no pass basis.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **IDENTIFY AND COMPOSE GRAMMAR AND USAGE OF STANDARD ENGLISH AT A PROFICIENT LEVEL OF BASIC WRITING (SLO #1)**.

- Recognize, identify, compose and apply sentence building, correct usage, and punctuation at a basic level of writing in Standard English.

- Identify and apply basic Standard English usage in terms of sentence components, pronoun agreement, pronoun usage, modifiers, parallelism, shifts, conciseness, sentence combining, and capitalization.
ENGWR 51 Developmental Writing

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **DEMONSTRATE UNDERSTANDING OF THE WRITING PROCESS TO ACHIEVE VARIOUS PURPOSES THROUGH WRITING (SLO #1).**
- Objective A: Demonstrate knowledge of the writing process, including prewriting, drafting, outlining, revising, and editing/proofreading.
- **COMPREHEND AND THINK CRITICALLY ABOUT PROFESSIONALLY WRITTEN TEXTS (SLO #2).**
- Objective A: Practice reading comprehension skills of note-taking, differentiating between main idea and support, drawing appropriate inferences, and analysis of style and organization of expository texts.
- **COMPOSE FULLY DEVELOPED, LOGICALLY STRUCTURED PARAGRAPHS AND SHORT ESSAYS (SLO #3).**
- Objective A: Practice writing focused paragraphs and essays with clear topic sentences/thesis statements and appropriate support.
- Objective B: Practice coherence and unity in paragraphs and essays through planned organization and the use of transitions.
- **RECOGNIZE AND BEGIN TO APPLY THE CONVENTIONS OF STANDARD WRITTEN ENGLISH (SLO #4).**
- Objective A: Use correct capitalization, spelling, and punctuation.
- Objective B: Recognize and correct major sentence errors in his/her own writing, such as fragments, run-on sentences, subject-verb agreement, pronoun agreement and references.
- Objective C: Practice writing timed essays with a focus on applying standard written English skills.

ENGWR 55 Fluency and Style in English Writing

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **EMPLOY DIFFERENT SENTENCE PATTERNS IN HIS/HER WRITING (SLO #1).**
  - Write sentences that indicate relationships between ideas.
  - Write sentences that achieve variety in his/her writing.
- **IDENTIFY STYLISTIC DEVICES IN THE WRITING OF OTHERS (SLO #2).**
  - Identify sentence patterns, such as subordination and coordination.
• Identify stylistic devices, such as participles and appositives.

• RECOGNIZE AND BEGIN TO APPLY THE CONVENTIONS OF STANDARD WRITTEN ENGLISH (SLO #3).

• Write clear and correct sentences.

• Use correct capitalization, spelling, and punctuation.

• Use knowledge of different sentence patterns to recognize and correct major sentence errors in his/her own writing, such as fragments and run-on sentences.

ENGWR 58 Writing Development with Reading

Same As: ENGRD 59
Units: 4
Hours: 72 hours LEC
Prerequisite: ENGRD 19 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

The focus of this course will be on writing and reading instruction as integrally related skills. Students will study and practice reading comprehension in the context of the writing process with the goal of accelerating the pathway to the English Reading and English Writing requirements. Students will develop critical thinking skills and the ability to write clear and correct sentences as they write a variety of focused, developed, organized paragraphs and essays. Students will write both full-process and in-class essays. This course may include a departmental final or portfolio assessment. Successful completion of this course will serve as a prerequisite for ENGWR 101 and ENGRD 110 only at Cosumnes River College. As enrollment into course will be based upon prerequisite, there will be no self-placement. This course is the same as ENGRD 59, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Comprehend, think critically, and respond appropriately in writing to a variety of professionally written non-fiction and fiction texts. (SLO 1)

• Use context to determine the meanings of words and to interpret the meaning behind a variety of non-fiction and fiction texts.

• Differentiate between main ideas and support details in a variety of non-fiction texts.

• Develop written responses with clearly stated main ideas/thesis statements and appropriate support details (including facts and supported opinions developed through careful critical thinking) when responding to a variety of non-fiction and fiction texts.

• Identify implied meanings and formulate appropriate conclusions in reading a variety of fiction and non-fiction texts.

• Identify and analyze basic organizational patterns in a variety of expository texts (e.g., generalization-example, cause-effect, and comparison-contrast).

• Compose fully developed, logically structured paragraphs and essays using the stages of pre-writing, drafting, revising, and editing. (SLO 2)

• Achieve coherence and unity in essay form with planned organization and the use of transitions.

• Achieve various purposes through writing.

• Develop text with thoughtful, focused thesis statements, relevant topic sentences, specific examples and details.

• Develop skill and confidence in writing timed essays.

• Recognize and begin to apply the conventions of standard written English. (SLO 3)

• Identify standard written English conventions in a variety of written texts.

• Write clear and correct sentences using correct capitalization, spelling, and punctuation.

• Recognize and correct major sentence errors in one’s own writing, such as fragments, run-on sentences, subject-verb agreement, pronoun agreement and references.

• Use word processor for composition and revision.

ENGWR 99 English Summer Bridge Program
This is a writing and grammar course that is part lecture and part lab. Students will focus on reading and writing as integrally related skills, hone their reading and writing processes, and practice grammar and sentence formation—all to become more college ready. This course is recommended for students who wish to review basic principles of standard English and practice college-level writing for ENGWR 51, ENGWR 101 or ENGWR 300. The course is graded on a pass/no pass basis.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate understanding of the writing process to achieve various purposes through writing (SLO #1)
- Comprehend and analyze various professionally written texts (SLO #2)
- Compose fully developed, logically structured paragraphs and short essays (SLO #3)
- Recognize and begin to apply the conventions of standard written English (SLO #4)
- Feel more comfortable in a college-level setting
- Feel more confident about writing skills and ability to succeed at the college level

ENGWR 101 College Writing

This course focuses on the connections between critical thinking, writing, and reading that are necessary for the independent development of essays in ENGWR 300 and other transfer-level courses. It emphasizes writing in response to various reading selections, including at least one full-length work. The essay writing process includes prewriting, thesis development and organization of ideas, drafting of essays, and revision. The course also requires outside research and includes an introduction to basic formatting and referencing of sources using MLA-style documentation. Students will write a minimum of four full-process essays totaling at least 4500 words.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- READ ANALYTICALLY AND THINK CRITICALLY ABOUT PROFESSIONALLY WRITTEN TEXTS (SLO #1).
- Annotate written texts.
- Select ideas from written texts by using current methods to accurately incorporate the ideas of others into his or her writing where appropriate.
- Identify the organizational structure of professional essays.
- Summarize texts.
- DEMONSTRATE PROFICIENCY WITH WRITING AS A PROCESS THAT INCLUDES PREWRITING, DRAFTING, AND REVISING BY COMPOSING UNIFIED, STRUCTURED, DEVELOPED ESSAYS (SLO #2).
- Accomplish various purposes through writing.
- Organize written texts logically.
- Write focused, thoughtful thesis statements.
- Achieve coherence and unity in writing at three levels: sentence, paragraph, and essay.
- SUPPORT OPINIONS AND CONCLUSIONS USING SUFFICIENT EVIDENCE, INCORPORATING THE IDEAS OF OTHERS WHERE APPROPRIATE (SLO #3).
- Incorporate sources effectively in writing.
- Construct a simple argument in writing that gives reasons to support a claim.
ENGWR 108 Accelerated College Writing

This course provides intensive instruction and practice in the critical thinking and writing skills necessary for success in college composition. Assignments are often connected to the students' assignments in ENGWR 300. The course includes the drafting, revision, and editing processes as well as instruction in critical thinking, reading comprehension, grammar, mechanics, and usage.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- DEMONSTRATE PROFICIENCY WITH WRITING AS A PROCESS THAT INCLUDES PREWRITING, DRAFTING, AND REVISING BY COMPOSING UNIFIED, STRUCTURED, DEVELOPED ESSAYS (SLO#1):

- employ a recursive writing process that includes pre-writing, drafting, revising, and editing;

- compose fully developed, structured, coherent, and unified essays;

- CONSTRUCT SENTENCES THAT DEMONSTRATE CONTROL OF GRAMMAR, SENTENCE VARIETY, WORD CHOICE, AND CONVENTIONS OF STANDARD WRITTEN ENGLISH (SLO#2):

- identify and correct sentence errors (especially sentence fragments, comma-splices and run-on sentences, subject-verb disagreement, incorrect verb tense and form, punctuation, pronoun

- READ ANALYTICALLY AND THINK CRITICALLY ABOUT PROFESSIONALLY WRITTEN TEXTS (SLO#3):

- summarize, analyze, and respond to college-level texts;

- incorporate the ideas of others into writing and demonstrate competence in MLA formatting and in-text citing.

ENGWR 109 Reading and Writing Skills for College

This integrated reading and writing course is designed to accelerate the preparation for college reading and writing competency requirement for students who are assessed into one level below transfer English courses. This course prepares students for ENGRD 310/312 and ENGWR 300 with integrated teaching and learning in both reading and writing to accelerate a pathway for English Reading and Writing requirements. Students will learn to develop reading skills in vocabulary expansion, unlocking meanings with context clues and word parts, increasing comprehension, SQ3R, and critical thinking. Students will also learn to develop skills in writing correct, clear, and concise sentences with proper English grammar that transfer to well developed and organized paragraphs and essays. Other skills include paraphrasing, summarizing, pre-reading and pre-writing techniques, revising and editing essays, analyzing and comparing ideas, identifying author's tone, bias, and purpose. This course is most ideal for students who are assessed into both ENGRD 110 and ENGWR 101. Upon successful completion of this course, students will have met the prerequisite for ENGRD 310/312 and ENGWR 300. This course may include a departmental final. This course is the same as ENGRD 113, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1 Demonstrate proficiency with reading and writing as a process that includes pre-reading/writing, reading/drafting, and post-reading and writing.

- Objective 1A: Annotate written texts.
Objective 1B: Identify organizational thought patterns in various styles of text.

Objective 1C: Make predictions before reading and adjust them while reading.

Objective 1D: Assess prior knowledge and personal experience through brainstorming, asking questions, and free write to make association with written texts.

Objective 1E: Construct summaries and outlines of written texts.

SLO #2 Demonstrate proficiency in composing and recognizing coherent sentences, paragraphs, and essays in proper English grammar in various reading materials and writing tasks.

Objective 2A: Understand parts of speech and apply the understanding in writing.

Objective 2B: Establish and expand specialized vocabulary and choose the appropriate words to express ideas.

Objective 2C: Use clear and varied sentences in writing with proper punctuation, capitalization, and word form.

Objective 2D: Develop error-free prose and recognize common errors in spelling in different styles of writing.

Objective 2E: Achieve coherence and unity in writing with a focused and logical thesis statement.

Objective 2F: Organize evidence and examples to support ideas in a logical manner that fits the style of writing and fulfill the purpose of writing.

SLO #3 Construct and demonstrate critical thinking skills through analyzing, evaluating, and synthesizing and through applying appropriate reading and writing strategies.

Objective 3A: Differentiate between facts, opinions, and informed opinions to interpret author’s tone and point of view.

Objective 3B: Draw proper conclusions and make effective evaluation upon examining factual information and implied messages in the text.

Objective 3C: Construct arguments in writing and provide evidence to support a claim.

Objective 3D: Incorporate and integrate multiple outside sources adequately and properly in writing.

Objective 3E: Adapt various reading techniques to accommodate reading rates.

Objective 3F: Follow MLA format in citing various sources when writing to respond to reading.

SLO #4 Apply appropriate comprehension strategies using effective and sufficient techniques in various reading materials and reflect such skills in written communication.

Objective 4A: Implement and apply SQ3R (Survey, Question, Read, Recite, Review) technique.

Objective 4B: Employ dictionary skills, structural analysis, and context clues to define unknown words.

Objective 4C: Understand the meaning of commonly used prefixes, roots, and suffixes.

Objective 4D: Use concept map to organize information that reflects comprehension of written texts.

Objective 4E: Employ effective highlighting skills.

Objective 4F: Apply, analyze and organize primary and secondary sources to synthesize ideas.

SLO #5 Apply study skills.

Objective 5A: Use annotation, highlighting, summarizing, outlining, and mapping to comprehend, evaluate, and analyze written texts.

Objective 5B: Employ proper time management skills to organize the process of assignment completion.

ENGWR 110 College Reading and Writing Skills

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This pre-transfer-level course is designed to prepare students for success in ENGWR 300 and other courses that require writing. Students will read primarily transfer-level non-fiction texts of varying length, and write essays responding to and incorporating these readings. The course will focus on reading and writing fundamentals, such as active reading strategies, writing process, thesis development, paragraph structure, logical support, and sentence awareness.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Comprehend, think critically, and respond appropriately in writing to a variety of professionally written non-fiction and fiction texts. (SLO 1)
- Use context to determine the meanings of words and to interpret the meaning behind a variety of non-fiction and fiction texts.
- Differentiate between main ideas and support details in a variety of non-fiction texts.
- Develop written responses with clearly stated main ideas/thesis statements and appropriate support details (including facts and supported opinions developed through careful critical thinking) when responding to a variety of non-fiction and fiction texts.
- Identify implied meanings and formulate appropriate conclusions in reading a variety of fiction and non-fiction texts.
- Identify and analyze basic organizational patterns in a variety of expository texts (e.g., generalization-example, cause-effect, and comparison-contrast).
- Compose fully developed, logically structured paragraphs and essays using the stages of pre-writing, drafting, revising, and editing.(SLO 2)
- Achieve coherence and unity in essay form with planned organization and the use of transitions.
- Achieve various purposes through writing.
- Develop text with thoughtful, focused thesis statements, relevant topic sentences, specific examples and details.
- Develop skill and confidence in writing timed essays.
- Recognize and begin to apply the conventions of standard written English. (SLO 3)
- Identify standard written English conventions in a variety of written texts.
- Write clear and correct sentences using correct capitalization, spelling, and punctuation.
- Recognize and correct major sentence errors in one's own writing, such as fragments, run-on sentences, subject-verb agreement, pronoun agreement and references.
- Use a computer for composition and revision.

ENGWR 300 College Composition

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 or equivalent skills demonstrated through the assessment process. Grade of "C" or better required to meet prerequisite.
Transferable: CSU; UC
General Education: AA/AS Area II(a); CSU Area A2; IGETC Area 1A
C-ID: C-ID ENGL 100
Catalog Date: June 1, 2020

This course offers instruction in critical thinking, reading and writing, and is designed to help the student demonstrate, in both argumentative and expository prose, sound logic and/or argumentation, clear organization, precise diction, and appropriate style. Throughout the course, fluency and correctness are emphasized.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- COMPOSE EFFECTIVE COLLEGE-LEVEL ESSAYS USING A VARIETY OF RHETORICAL STRATEGIES AND APPLYING APPROPRIATE CITATIONS AND Formatting STANDARDS (SLO #1).
- Use pre-writing, drafting, revision, and editing/proofreading to create essays.
- Write focused, thoughtful thesis statements.
- Support opinions in writing through careful, critical thinking.
- Adequately develop essays using a variety of approaches, such as comparison/contrast, classification, definition, narration, description, causal analysis.
- Construct a logical argument in writing that deals with the opposition and gives reasons to support a claim.
- Achieve coherence and unity in writing at three levels: sentence, paragraph, and essay.
ENGWR 301 College Composition and Literature

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Organize written texts logically without dependence on formulaic prescriptions.
- RESEARCH, EVALUATE, AND SYNTHESIZE SOURCES TO SUPPORT A THESIS (SLO #2).
- Use MLA documentation format correctly.
- Summarize, paraphrase, and directly quote outside sources as support for his or her ideas.
- Research and incorporate sources effectively and meaningfully in writing.
- CRITICALLY ANALYZE, COMPARE, AND EVALUATE VARIOUS COMPLEX WORKS (SLO #3).
- Annotate and analyze written texts and respond thoughtfully to them.
- Analyze and evaluate the 3-fold rhetorical concerns of audience, writer, and message in written texts.
- Effectively critique his or her own and other student writing.
- APPLY THE CONVENTIONS OF STANDARD WRITTEN ENGLISH EMPLOYING A VARIETY OF SENTENCE STRUCTURES AND COLLEGE-LEVEL DICTION (SLO #4).
- Use clear and varied sentences to write error-free prose.

ENGWR 301 offers the study of literature, with an emphasis on analytical reading and writing. It covers principles of argument and analysis, such as reasoning inductively and deductively. Assigned readings may include novels, short stories, poems, plays, and literary criticism. Essays written for the course (6,000 words minimum) generalize from the texts to present carefully reasoned arguments. At least one essay includes citations from secondary sources, documented according to current MLA format.
identify premises, both explicitly and implicitly stated.

- distinguish among facts, inferences, assumptions, and implications.

- recognize fallacious reasoning, including but not limited to the standard critical thinking fallacies, in various critical interpretations of literary works (including the students' own interpretations) and respond to (and correct, if necessary) these fallacies.

- compare opposing interpretations by literary scholars.

- OBTAIN THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES (SLO 5, P-SLO 5)

- propose a thesis-driven argument of interpretation or evaluation and support it with textual evidence, using a sufficient variety and number of appropriate examples.

- support the thesis with a sufficient number and variety of appropriate examples from both primary and secondary texts, taking into account alternate and opposing points of view.

- construct logical discourse through order, repetition, and transitional devices.

- use diction appropriate to the audience and the rhetorical purpose of writing.

- use elements of style with increasing complexity (such as absolute phrases or repetition) to achieve coherence.

This course is designed for students who have had ENGWR 300 and who desire further instruction in the techniques of effective critical thinking as expressed in written argument and in the major principles of advanced composition and rhetoric.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **PREPARE STUDENTS TO BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO#1, PSLO#3)

- write effective precis and responses, stance/position papers, proposals, evaluations and analyses of cause in which they demonstrate an understanding of the diction and structural differences between the Upper, Middle and Lower styles in English, and demonstrate an ability to determine which of these styles is appropriate to the tone, purpose and audience of their essay; demonstrate an ability to use the advanced principles of clarity (agent-action-goal) and coherence (concatenation, focus maintenance, clear orientation and subject control), concision and emphasis to develop more sophisticated writing skills appropriate to upper-division college essays; demonstrate a highly-developed ability to use the thoughts, facts, and experiences of other to support their own assertions effectively and to cite those thoughts, facts and experiences when appropriate to the Upper Middle Style, including but not limited to the use of tropes and schemes and the use of syntactic symbolism; demonstrate the ability to limit the topic appropriately to a scope that can be developed appropriately in the length of the composition; demonstrate an ability to select examples details, data and other evidence to support the validate the thesis and other generalization; demonstrate (in taking stances or criticizing the arguments of others) an ability to rephrase written argument accurately, producing a faithful distillation of the central meaning of the text or the writer's ostensible intention; demonstrate a clear awareness of the specific audience of the essay and of any special limitations or opportunities imposed or provided by the rhetorical situation, and demonstrate an ability to respond to those limitations and opportunities appropriately by adjusting the arguments and the language of the essay appropriately.

- **ENABLE STUDENTS TO DEVELOP ACADEMIC LITERACY SKILLS, TO UTILIZE READING AND WRITING PROCESSES, TO FIND AND COMPREHEND INFORMATION, AND TO APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS. (SLO#2, PSLO#4)

- read analytically and evaluate ideas in focused class discussion and in written techniques, read competing points of view of subjects and determine their own stances on the subjects and be able to express those stances logically and effectively, demonstrating an ability to identify and state the main idea, thesis or unifying theme in expository or argumentative discourse; to point out instances of inferential reasoning and deductive and inductive logic; to distinguish between opinion, judgment and what may be taken as a fact, and to describe an appropriate process of verification in establishing whether an utterance is factual or not; to recognize and articulate assumptions (including unstated assumptions) in an argument; to draw and justify inferences made about the intention of the writer based on observations of the writer's diction and style (e.g., tone, persona and metaphor); to point out logical fallacies or slanted or propagandist use of language.

- **ASSIST STUDENTS IN OBTAINING THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES. (SLO#3, PSLO#5)**

---
demonstrate more sophisticated structure, coherence and emphasis; demonstrate their understanding of the elements of style, with particular emphasis placed on the role of grammar as an element of style; demonstrate an understanding of some of the principles of classical rhetoric and of the Upper Middle Style found in most American journals-of-record; demonstrate an understanding of opposing viewpoints on issues and to develop their own stances on those issues; and demonstrate an ability to argue cogently in a number of modes, including but not limited to making proposals, making evaluation and position the existence of causal relationships.

ENGWR 309 Documenting Research for College Composition

Units: 1
Hours: 18 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better, or placement through the assessment process.
Advisory: LIBR 318
Transferable: CSU; UC
Catalog Date: June 1, 2020

Learn to add credibility and to avoid plagiarism in your writing as you explore the principles and mechanics of documenting research while developing critical thinking skills. The final product of the course is a well-researched argumentative essay that shows mastery of the documentation style guidelines of the Modern Language Association of America (MLA).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- BECOME SELF-RELIANT, EVALUATIVE READERS AND WRITERS, ABLE TO USE CRITICAL THINKING SKILLS TO READ AND WRITE EFFECTIVELY IN ACADEMIC AND WORKPLACE SETTINGS. (SLO #1, P-SLO #3)
- Write a researched argumentative essay in which the parenthetical references correctly follow MLA guidelines.
- Evaluate Internet sites for their credibility in academic research.
- DEVELOP ACADEMIC LITERACY SKILLS, UTILIZE READING AND WRITING PROCESSES, FIND AND COMPREHEND INFORMATION, AND APPLY THAT KNOWLEDGE IN MYRIAD RHETORICAL SITUATIONS. (SLO #2, P-SLO #4)
- Use basic argumentative principles such as providing reasons with grounds, backing up assumptions underlying reasons, and dealing with the opposition.
- Use the Internet to find credible sources to support a research paper.
- OBTAIN THE NECESSARY READING AND WRITING SKILLS FOR UNIVERSITY-LEVEL COURSES. (SLO #3, P-SLO #5)
- Distinguish between quoting, paraphrasing, and summarizing and using each method of textual reference in a research paper.
- Use the college library's full text databases to find current research on a given topic.
- RECOGNIZE THE ETHICAL IMPLICATIONS OF VARIOUS MODES OF COMMUNICATION AND THE NEED TO USE THIS KNOWLEDGE RESPONSIBLY. (SLO #4, P-SLO #2)
- Create a works cited page that documents at least 10 different kinds of sources compiled for a research paper.

ENGWR 330 Writing for Publication

Same As: JOUR 340
Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300, ENGWR 480, HONOR 375, or JOUR 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This is an introductory course in writing nonfiction for publication. Emphasis will be on developing magazine articles that sell; finding ideas; analyzing magazines; writing query letters; researching and interviewing; organizing, writing and illustrating articles. Individual and class criticism of student work will be featured. This course is the same as JOUR 340, and only one may be taken for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
ENGWR 331 Writing for Publication

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300 with a grade of "C" or better
Advisory: ENGWR 330
Transferable: CSU
Catalog Date: June 1, 2020

This course offers a marketing approach to selling nonfiction writing. The course surveys consumer, general interest and specialty magazines, including trade journals, company publications, regional magazines and local markets. Activities will include the following: reporting on magazine categories; analysis of a variety of magazine article styles and types; writing and sending articles to the marketplace; individual and class criticism of student manuscripts. Emphasis will be placed on increasing freelance writing publication. The course may be taken twice for credit, with the understanding that many universities and four-year colleges place a nine-unit limit on transfer credit from advanced composition courses (ENGWR 330, 331 and ENGCW 400).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- review selling procedures, writing an effective query, and writing as a business.
- understand and apply techniques for increasing freelance production and sales through multiple submissions to the magazine marketplace.
- examine consumer, general interest, specialty, local and international magazines.
- mail out query letters and manuscripts on schedule.
- gain hands-on experience using computers to research and write articles.
- develop writing and editing skills.
- develop oral presentation and interpersonal skills.
- develop critical thinking skills; identifying and defining problems or issues; collecting analyzing, and evaluating information; synthesizing and developing conclusions.
- gain personal satisfaction through preparing work for publication.
ENGWR 341 Introduction to Technical and Professional Writing

This course emphasizes principles of reader-centered writing for the workplace, focusing specifically on aspects of technical and professional writing. The course teaches the writing of documents used in industry and business. These documents may include memos, letters, brochures, reports, process analyses, technical descriptions, procedures, proposals, grants, scientific reports, web sites, software documentation, and case studies. The course may include team projects that require collaboration outside the classroom. The course complements communication skills needed for the division of Career and Technical Education. The course is intended to be applicable to AS and AA CTE degrees.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- IDENTIFY THE VARIOUS FORMS OF TECHNICAL COMMUNICATION, INCLUDING THE AUDIENCES TO WHOM THEY ARE FOCUSED (SLO#1).
- Analyze a variety of document formats with regards to audience and purpose.
- Propose writing solutions to fill information needs.
- Compose documents suited for the appropriate audience.
- Revise professional documentation based on audience feedback.
- RESEARCH, EVALUATE, AND SYNTHESIZE SOURCES TO SUPPORT A PROPOSAL OR HYPOTHESIS (SLO#2).
- Collect and evaluate technical and organizational information.
- Compose documents by incorporating summary, paraphrase, and direct quotations as support for the writer's ideas and correctly using Council of Science Editors (CSE) or American Psychological Association (APA) style to format and cite.
- DESIGN, CREATE AND COMPOSE DOCUMENTS DEPENDENT ON PURPOSE AND SITUATION (SLO#3).
- Design documents to make content visually appealing and accessible through highlighting, headings, subheading, bulleted, and visual aids.
- Compose documents persuasively to convince the audience by arousing interest, supporting points with research, refuting opposing points, writing ethically by documenting sources and reviewing for accuracy.
- Incorporate the rhetorical appeals of ethos, logos, and pathos in written communication.
- Avoid logical fallacies when communicating persuasively.
- Use various communication channels including social media, routine correspondence, electronic communication, sales letters, brochures, and flyers to market services and products.

ENGWR 480 Honors College Composition

Same As: HONOR 375
Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU
General Education: AA/AS Area II(a)
Catalog Date: June 1, 2020
This course offers the honors student a challenging course that will develop skills in critical thinking, reading, and writing. It asks students to critically analyze, compare, and evaluate various complex works. The course is designed to help students demonstrate, in both argumentative and expository prose, complex critical thinking, effective organization, precise diction, and sophisticated style; at least one of those essays requires research and appropriate MLA documentation. Essays written during the term will total at least 8,000 words. Throughout the course, fluency and correctness are emphasized. This course is not open to students who have successfully passed ENGWR 300 or ESLW 340. This course is the same as HONOR 375. This course, under either name, may be taken one time for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- **COMPOSE CAREFULLY REASONED AND STYLISTICALLY SOPHISTICATED COLLEGE-LEVEL ESSAYS USING A VARIETY OF RHETORICAL STRATEGIES AND APPLYING APPROPRIATE CITATIONS AND FORMATTING STANDARDS (SLO #1; PSLO #1; Honors Prog.SLO # 1 and #5).**
- Use pre-writing, drafting, revision, and editing/proofreading to create essays.
- Write focused, thoughtful thesis statements.
- Support opinions in writing through careful, critical thinking.
- Compose stylistically sophisticated essays using a variety of approaches, such as comparison/contrast, classification, definition, narration, description, causal analysis.
- Construct a carefully reasoned argument in writing that considers audience and opposition.
- Build coherence and unity in writing at three levels: sentence, paragraph, and essay.
- Organize written texts logically and creatively without dependence on formulaic prescriptions.
- APPLY COMPLEX CRITICAL THINKING SKILLS BY DEFINING ISSUES AS WELL AS RESEARCHING, EVALUATING, AND SYNTHESIZING SOURCES TO SUPPORT A THESIS (SLO #2; PSLO #2 and PSLO #3; Honors Prog. SLO # 3 and #4).
- Appraise and use a variety of research techniques.
- Evaluate sources.
- Research and incorporate sources effectively and meaningfully in writing.
- Summarize, paraphrase, and directly quote outside sources as support for his or her ideas and/or represent a belief held by the opposition.
- Use MLA documentation format correctly.
- CRITICALLY ANALYZE, COMPARE, AND EVALUATE VARIOUS COMPLEX WORKS (SLO #3; PSLO #4; Honors Prog. SLO #2 and #5).
- Annotate and analyze complex written texts and respond thoughtfully to them.
- Analyze and evaluate the 3-fold rhetorical concerns of audience, writer, and message in written texts.
- Question an author's claim and support.
- Critique his or her own and other student writing.
- APPLY THE CONVENTIONS OF STANDARD WRITTEN ENGLISH EMPLOYING A VARIETY OF SENTENCE STRUCTURES AND COLLEGE-LEVEL DICTION (SLO #4; PSLO #5; Honors Prog. SLO #1).
- Use clear and varied sentences to demonstrate overall mastery of the conventions of standard written English.
- Analyze his or her own and other student style and diction.

An independent studies project involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses. See the current catalog section of "Special Studies" for full details of Independent Studies.
Upon completion of this course, the student will be able to:

- **SLO #1:** Actively engage in intellectual inquiry beyond that required in order to pass a course of study (College Wide Learning Outcome – Area 4).
- Discuss and outline a proposal of study (that can be accomplished within one semester term) with a supervising instructor qualified within the discipline.
- Design an independent study (to be completed individually or by collaboration of a small group) to foster special knowledge, skills, and experience that are not available in any one regularly scheduled course.
- Use information resources to gather discipline-specific information.
- **SLO #2:** Utilize modes of analysis and critical thinking to apply theoretical perspectives and/or concepts in the major discipline of study to significant problems and/or educational activities (College Wide Learning Outcome – Area 3).
- Analyze and apply the knowledge, skills and experience that are involved in the independent study to theoretical perspectives and/or concepts in the major discipline of study.
- Explain the importance of the major discipline of study in the broader picture of society.
- **SLO #3:** Communicate a complex understanding of content matter of the major discipline of study (College Wide Outcome – Area 3).
- Demonstrate competence in the skills essential to mastery of the major discipline of study that are necessary to accomplish the independent study.
- **SLO #4:** Identify personal goals and pursue these goals effectively (College Wide Outcome – Area 4).
- Utilize skills from the “academic tool kit” including time management, study skills, etc., to accomplish the independent study within one semester term.
English as a Second Language  
| Cosumnes River College

CRC offers a comprehensive ESL program with courses in grammar, listening/speaking, pronunciation, reading, and writing designed to provide the English language learner with the command of the English language necessary to pursue both transfer and vocational courses and enter the workforce. Students can enter with virtually no knowledge of English and progress to an extremely proficient level.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **PSLO 1:** Employ the writing process to complete several multi-draft essays that include outside sources.
- **PSLO 2:** Consistently demonstrate college-appropriate skills both in and out of the classroom.
- **PSLO 3:** Complete college-level assignments including following multi-part instructions, using independent thinking or basic research, completing work on time even when multiple steps are required, and utilizing correct formatting for all written assignments.
- **PSLO 4:** Respect academic integrity by using one’s own ideas and words in writing and citing sources when necessary.

English as a Second Language (ESL)

ESL 24 Novice-Mid ESL Skills Lab

**Units:** 0.5 - 1.5  
**Hours:** 27 - 81 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students may only enroll in one ESL Skills Lab per semester.  
**Advisory:** ESL 20, ESLR 20, and ESLW 20; Concurrent enrollment in ESSL 20, ESLR 20, and/or ESLW 20 is recommended as ESL 24 is designed to supplement the instruction students receive in those courses.  
**Catalog Date:** June 1, 2020

This course develops, expands, and reinforces multiple English language skills at the novice-mid level in an independent and/or small group environment. Coursework includes integrated study topics relative to vocabulary and study skills, reading, grammar use, idiomatic language study and application, conversation and listening skills, and assorted integrated software programs. Late registration is allowed as long as space is available and with the permission of the instructor. This course is not a substitute for other ESL courses. Students will earn .5 units for each 27 hours of lab completed for a maximum of 1.50 units. This course is a Pass/No Pass course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- **SLO #1:** Recognize basic parts of speech and basic elements of English sentences.
- Identify nouns, verbs, adjectives, articles, and prepositions.
- Analyze basic English sentences to identify subjects, verbs, and completers.
- **SLO #2:** Use the simple present, past, future and present progressive tenses correctly.
- Produce sentences in oral or written form using verb form and tense correctly.
- **SLO #3:** Demonstrate comprehension of basic English.
• Answer simple questions about the literal content of basic level English text or aural passages.

• SLO #4: DEMONSTRATE UNDERSTANDING OF THE ENGLISH ALPHABETIC PRINCIPLES.
  
  • Recognize all the letters of the English alphabet as well as most of the phonetic sounds of English.
  
  • Produce the sounds of American English with occasional native language interference.

ESL 27 Beginning-Low Integrated Reading and Writing

This course focuses on the fundamental reading and writing skills which are necessary for success in an academic English program. Students will develop an understanding of vocabulary building, reading comprehension, and the basic grammar and sentence structure necessary for paragraph writing. Students will use content from course readings to develop ideas for their own writing. This course is part of the reading and writing sequence which prepares ESL students to take college courses leading to a certificate, degree, and/or transfer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• SLO #1: DEMONSTRATE UNDERSTANDING OF THE ALPHABETIC PRINCIPLES OF ENGLISH.
  
  • Recognize and write all letters of the English alphabet
  
  • Associate speech sounds and spoken words to their alphabetic equivalents.
  
  • Analyze the syllabic structure of spoken and written words.
  
  • Apply the alphabetic principle to vocalize printed words having regular spellings.

• SLO #2: EMPLOY BASIC VOCABULARY BUILDING RESOURCES AND STRATEGIES.
  
  • Use an English language learner dictionary to determine appropriate meaning of new words.
  
  • Infer meanings of new words given visual and contextual clues.

• SLO #3: DEMONSTRATE EXPLICIT COMPREHENSION OF BASIC TEXTS.
  
  • Interpret and answer simple questions about the literal content of beginning-level texts.
  
  • Employ rudimentary scanning to locate explicit information in assigned texts.
  
  • Ask/write questions about the literal content of beginning-level texts.

• SLO #4: DIFFERENTIATE BETWEEN BASIC PARTS OF SPEECH AND BASIC PARTS OF SENTENCES.
  
  • Identify nouns, verbs, adjectives, adverbs, articles and prepositions.
  
  • Identify subjects, verbs, and completers.

• SLO #5: CONSTRUCT SIMPLE AFFIRMATIVE AND NEGATIVE STATEMENTS AND QUESTIONS.
  
  • Use the simple present, past, and future and the present progressive tenses correctly.
  
  • Use English word order with proper punctuation and spelling.

• SLO #6: WRITE A BASIC PARAGRAPH OF ABOUT 10 SENTENCES WITH A CLEAR BEGINNING, MIDDLE, AND END.
  
  • Respond to a prompt by writing sentences that are related or tell a story.
  
  • Use correct paragraph format.

ESL 34 Novice-High Skills Lab
This course develops, expands, and reinforces multiple English language skills at the novice-high level in an independent and/or small group environment. Coursework includes integrated study topics relative to vocabulary and study skills, reading and grammar use, idiomatic language study and application, conversation and listening skills, and assorted integrated software programs. Late registration is allowed as long as space is available and with the permission of the instructor. This course is not a substitute for other ESL courses. Students will earn .5 units for each 27 hours of lab completed for a maximum of 1.50 units. This course is a Pass/No Pass course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: IDENTIFY BASIC PARTS OF SPEECH AND BASIC ELEMENTS OF ENGLISH SENTENCES.
  - Identify subjects, verbs, and completers in simple, compound and basic complex sentences.
  - Recognize the function of various types of conjunctions and use them correctly.
- SLO #2: EMPLOY STRATEGIES TO IMPROVE READING AND AURAL COMPREHENSION.
  - Identify topics, main ideas, and supporting details in reading passages and listening activities.
  - Identify vocabulary meaning based on context clues.
- SLO #3: DEVELOP EFFECTIVE WRITING AND REVISION STRATEGIES.
  - Identify main ideas, topic sentences, and supporting details in own writing.
  - Construct simple sentences using simple present, simple past, and future tenses.
  - Apply basic punctuation and capitalization rules.
- SLO #4: EMPLOY BASIC RULES OF SYLLABICATION, STRESS AND INTONATION OF STANDARD AMERICAN ENGLISH
  - Distinguish the three -s ending sounds and understand the cause for the variant sounds.
  - Differentiate the three -ed ending sounds and understand the cause for the variant sounds.
  - Recognize basic stress, rhythm, and intonation patterns of American English and how these affect meaning.

ESL 37 Novice-High Integrated Reading and Writing

This course focuses on learning academic reading and writing skills at the novice-high level, with an emphasis on vocabulary development, reading comprehension, and the writing process. Students will develop paragraphs with a clear beginning, middle, and end in the context of a multiple paragraph writing assignment. This course is part of the reading and writing sequence which prepares ESL students to take college courses leading to a certificate, degree, and/or transfer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE COMPREHENSION OF MULTI-PARAGRAPH TEXT WITH INCREASING LEVELS OF SOPHISTICATION.
  - Identify main ideas, topic sentences, and supporting details.
  - Use skimming and scanning strategies to identify general ideas and locate specific information.
  - Use background knowledge and personal experience to improve understanding of a reading.
- SLO 2: DEVELOP VOCABULARY BUILDING STRATEGIES
  - Use context clues to determine meaning of new words.
- Identify basic prefixes, suffixes and roots and use that information to determine part of speech and meaning.
- Use a variety of strategies to successfully acquire new vocabulary.
- SLO 3: EMPLOY THE WRITING PROCESS TO COMPLETE MULTI-PARAGRAPH WRITING ASSIGNMENTS.
- Write focused paragraphs with a clear beginning, middle, and end based on topics covered in the course.
- Apply basic steps in the writing process including prewriting, writing, editing, and revising.
- Demonstrate use of basic writing and formatting conventions including punctuation, capitalization, margins, indentations, spelling, and legible handwriting.
- SLO 4: PRODUCE SIMPLE SENTENCES AS WELL AS BASIC COMPOUND AND COMPLEX SENTENCES WITH CORRECT ENGLISH SYNTAX, PUNCTUATION AND CAPITALIZATION.
- Recognize dependent and independent clauses in simple, compound and complex sentences by identifying subjects, verbs, and completers.
- Produce compound and complex sentences by using conjunctions effectively.
- SLO 5: USE GRAMMAR TO COMMUNICATE EFFECTIVELY IN WRITING.
- Use simple present, present continuous, simple past, and simple future correctly according to context.
- Use singular and plural count nouns and noncount nouns with correct articles and quantifiers.
- Use adjectives effectively.

ESL 39 College Ready Skills for English Language Learners

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisites: | ESLL 20, ESLR 20, or ESLW 20 with a grade of "C" or better, or placement through the assessment process. |
| Catalog Date: | June 1, 2020 |

This is a course to prepare English language learners for success in the American academic experience. This course provides college success strategies, language skills, and support resources in the language appropriate for entry level ESL students.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: DEMONSTRATE AN UNDERSTANDING OF AMERICAN COLLEGE POLICIES AND PRACTICES.
- Identify college services and resources.
- Demonstrate an understanding of how to use an online management systems and the college website.
- Recognize and use vocabulary related to a college campus, resources, and policies.
- SLO #2: USE BASIC STRATEGIES TO INCREASE ACADEMIC SUCCESS IN READING, WRITING, AND LISTENING/SPEAKING.
- Use basic reading skills such as previewing, scanning, and part of speech recognition to increase reading comprehension.
- Identify and use linear patterns of organization including basic outlining.
- Use a variety of set phrases for speaking with professors and classmates.
- Use basic strategies for correcting errors in writing.
- SLO #3: DEVELOP AWARENESS OF STUDY STRATEGIES AND TEST-TAKING STRATEGIES.
- Demonstrate an understanding of time management and expectations of work done outside of class.
- Identify a variety of test questions and develop the ability to follow directions on tests in English.
- Use a variety of strategies for increasing academic vocabulary in English.

ESL 44 Intermediate-Low Skills Lab
This course develops, expands, and reinforces multiple English language skills at the intermediate-low level in an independent and/or in small group environment. Coursework includes integrated study topics relative to vocabulary and study skills, reading and grammar use, idiomatic language study and application, pronunciation and listening skills, composition and writing, and/or workplace skills. This is an open-entry open-exit course. Students may register until the end of the ninth week of the semester if space allows. This course is not a substitute for other ESL courses. Students will earn .5 units for each 27 hours of lab completed for a maximum of 1.50 units. This course is graded Pass/No Pass.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO #1: EXTRACT VITAL INFORMATION FROM LISTENING PASSAGES AND LECTURES TO TAKE NOTES OF MAIN AND SUPPORTING IDEAS.
- SLO #2: DEMONSTRATE EXPLICIT COMPREHENSION OF LEVEL APPROPRIATE TEXTS.
  - Locate topics, recognize main ideas and major supporting details in intermediate level reading passages.
- SLO #3: DISTINGUISH THE MEANINGS CONVEYED BY FUNDAMENTAL ENGLISH GRAMMAR STRUCTURES.
  - Identify and produce simple, compound and complex sentences with correct punctuation.
  - Identify and produce sentences with appropriate verb structures.
- SLO #4: EXHIBIT AN EMERGING UNDERSTANDING OF THE REVISION AND EDITING PROCESS AS TOOLS FOR WRITING IMPROVEMENT.

ESL 47 Intermediate-Low Integrated Reading and Writing

ESL 47 is an integrated reading and writing course for English language learners at the intermediate level. In preparation for academic writing, students build skills in pre-writing, learn to write strong paragraphs, and practice the basics of essay structure. Students also build academic reading skills and vocabulary. With the information gathered through readings, students begin to use academic content to supplement their ideas in writing. This course is part of the reading and writing sequence, which prepares ESL students to take college courses leading to a certificate, degree, and/or transfer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- SLO 1: DEMONSTRATE COMPREHENSION OF MULTI-PARAGRAPH ACADEMIC TEXTS
  - Actively and critically respond to readings through discussions, journals, etc.
  - Begin to demonstrate understanding of main and supporting ideas through the use of graphic organizers or basic outlines.
- SLO 2: EMPLOY LEVEL-APPROPRIATE VOCABULARY BUILDING STRATEGIES
  - Begin using prefixes and suffixes to expand vocabulary.
  - Recognize and identify word families.
- SLO 3: USE COMMON ENGLISH SENTENCE PATTERNS
  - Use simple, compound, and complex sentences with correct punctuation and conjunctions.
- SLO 4: EMPLOY THE WRITING PROCESS TO COMPLETE SEVERAL WRITING ASSIGNMENTS.
  - Show the ability to complete all steps of the writing process for paragraph and basic essay writing.
  - Write fully developed paragraphs with a clear topic sentence, supporting sentences, and concluding sentence.
Show the ability to move from paragraph to basic essay writing.

Demonstrate an understanding of unity and coherence in writing.

Apply level-appropriate grammar to writing to make ideas clear, concise, and specific.
