The Tiny House Village project is a collaborative effort partially funded by Prop 39 and SMUD’s Shine Grant to provide students in our Architecture, Architectural Design, Construction, and Horticulture programs the opportunity to design and construct a Tiny House Village with sustainable irrigation and landscaping. This project will not only benefit the students involved now, but it will involve future students who will complete the project. It will then involve students who will sustain the project in perpetuity by continually upgrading the technology which will impact thousands of students.

Building Futures Together...
One Tiny House at a Time

CRC’s Tiny House Village is educating our community's future workforce and addressing basic needs in our region. While the Village will be not be inhabited by residents on campus, it can be used for the purposes of designing a Tiny House Community which could be replicated in areas where the need is greatest.
